# ARE YOU GETTING THE BEST LEICA SERVICE

Wallace Heaton offers facilities which cannot possibly be obtained elsewhere. Registered Leica customers are supplied free on request with Leica spool transit envelopes to ensure safe despatch of D. & P. orders. Free copies of "Leica News and Technique" are sent to you periodically, and "News" binders for preserving your copies are supplied at 1/- each. Leica exposure record cards are also available. Full technical information is willingly given on all matters photographic.

## DO YOU KNOW WHERE to FIND THE BEST RANGE OF STILL and CINÉ APPARATUS

Wallace Heaton carries the most comprehensive selection of latest miniature cameras and accessories, and all the best home movie apparatus, both silent and talkie. Demonstrations willingly given at any time by appointment.

## DO YOU KNOW THE BEST 9.5-mm. AND 16-mm. SILENT AND 16-mm. SOUND-ON-FILM LIBRARY

Every latest title is included, and customers are advised of the latest releases from time to time. It is as cheap to hire them by post as to call in our shop, as time taken in the post is deducted from hiring charge. Send for full particulars.

## DO YOU KNOW WHERE YOU CAN GET AS MANY AS FIVE SEPARATE FREE CATALOGUES

You can at Wallace Heaton's. Our stocks are so large and varied that we have a catalogue each for Cameras, Ciné Apparatus, Used Bargains, Sundries, and Film Library. Any or all you need are sent free for 2d. postage.

## CAN YOU GET BARGAINS LIKE THESE USED, BUT ALL FULLY GUARANTEED

## ● HERE'S A RECENT GENUINE LETTER

Brighton.

August 30th, 1935.

"I wish to thank you for the very prompt and speedy manner in which my camera was despatched.

The camera far exceeds my expectations for such a low price. I should be glad at any time to receive further information concerning your many bargains." W. T.

## ● OUR VERY EASY TERMS

Anything may be purchased from Bond Street on nine equal monthly instalments. First payment entitles you to full use of the goods while you are paying the balance. Buy this easy way.

## ● GENEROUS EXCHANGES

Here's where you save money on your used apparatus. Let us have it in part payment for your fresh purchase. We make the highest allowance obtainable anywhere. Let us quote you on your used camera or cine apparatus.

By Appointment to  
H.R.H. The Prince of Wales

PLEASE MENTION "THE AMATEUR PHOTOGRAPHER" WHEN CORRESPONDING WITH ADVERTISERS.

## GET READY FOR NIGHT PHOTOGRAPHY

There is no need for you to put your camera away for the winter, for Selo Hypersensitive Panchromatic Roll Film makes it possible for you to take fine pictures with fast exposures after dark. Any camera will give good results with this amazingly sensitive film, adding a new and fascinating delight to amateur photography.

A great many fine subjects are made a great deal easier to take by the —

# KODAK ★ NIGHT PHOTOGRAPHY ★ ★ AIDS ★

All the pictures that lie within the four walls of your home—of family and friends in the hundred-and-one picture-worthy incidents of home life—are brought within easy range of your camera by these simple, inexpensive Kodak Aids. Read about them below. Then visit your Kodak Dealer to-day, and you'll be able to sample this new enjoyment to-night.

**Kodak Super Sensitive Panchromatic Film**, the film of lightning speed, is the film to use for all photography by artificial light. It is made in Roll Film and Film Packs.

Kodak "S.S.Pan" should be used *either* with the "Photoflood" Lamp and "Kodaflector" Reflector, *or* with the "Sashalite." The "Photoflood" gives a powerful *continuous* light; the "Sashalite" gives one brilliant *flash*.

**"Photoflood" Lamp.** Plugs into any standard electric light socket. New reduced price, **2/6**.

**"Kodaflector" Reflector.** Fits on to electric light socket in place of ordinary lampshade; increases effectiveness of "Photoflood" at least  $4\frac{1}{2}$  times. **3/-**

**"Kodaflector" Outfit.** Consists of "Kodaflector" Reflector plus handy wire stand enabling "Kodaflector" to be stood on chair or table, suspended from picture-rail or shelf, etc. Supplied with 9 ft. of stout flex, bayonet adapter and lampholder for "Photoflood." **7/6**

Stand only, including flex, bayonet adapter and bayonet lampholder, **4/6**.

**Baby "Sashalite" Bulb.** No smoke, no smell, no danger. The modern successor to flashlight. Fired by pocket torch battery. **10½d.**

**"Sashalite" Outfit.** Consists of 2 Baby "Sashalite" Bulbs, battery in holder, and reflector. **7/6**.

Illustrated folder on Night Photography free on request.

How this picture was made. Two "Photofloods" in "Kodaflectors" provided the light. Exposure:  $1/25$ th sec. at f8 on Kodak "S.S. Pan" Film.

# Make your own enlargements

ZEISS IKON, always foremost with precision instruments, offer a varied selection of high-class enlargers. First, the

**MIRAPHOT** A vertical automatic focussing enlarger in three sizes: (a) for negatives any size up to  $4\frac{1}{2} \times 3\frac{1}{2}$  ( $9 \times 12$  cm.); (b) up to  $3\frac{1}{2} \times 2\frac{1}{2}$ , and (c) up to  $1\frac{1}{2} \times 1\frac{1}{2}$  ( $3 \times 4$  cm.). With the MIRAPHOT manipulation is simple. The lenses give perfect definition, thanks to the scientifically designed reflector, illumination is even and negatives seldom require retouching.

Prices, complete with Zeiss Tessar f/4.5:

For negatives up to  $9 \times 12$  cm. . . . . £14 15 0  
For negatives up to  $3\frac{1}{2} \times 2\frac{1}{2}$  . . . . . £10 15 0

With Zeiss Ikon anastigmat: For negatives up to  $1\frac{1}{2} \times 1\frac{1}{2}$  . . . £11 2 6

THE  
MIRAX

## then the MIRAX

An all-metal enlarging attachment which utilises your roll-film or plate camera from  $3\frac{1}{2} \times 2\frac{1}{2}$  to  $4\frac{1}{2} \times 3\frac{1}{2}$ . It can be used horizontally, as illustrated, or vertically with the MIRAX vertical easel. It gives powerful illumination, consequently short exposures, and it is the most economical way of obtaining a first-class enlarger. Prices for camera up to  $4\frac{1}{2} \times 3\frac{1}{2}$ , including lamp . . . £3 7 6  
Prices for camera up to  $3\frac{1}{2} \times 2\frac{1}{2}$ , including lamp . . . £3 10 0  
The Mirax is normally supplied for horizontal use as illustrated; when equipped with easel for vertical use costs £1 17 6 extra.

ZEISS IKON products are stocked by most good camera shops, name and address of nearest dealer on request.

## MINIATURE CAMERA BARGAINS AT LOWER PRICES

### SPECIALIZATION.

#### MINIATURE APPARATUS.

We are the only firm in Great Britain specializing exclusively in miniature apparatus such as the Leica and Contax. Every miniature camera of distinction together with a full range of accessories is to be seen at our showrooms. Where miniature cameras are concerned, we give the highest part-exchange allowances and pay the best cash prices in the trade. Any type of modern high-class apparatus taken in part exchange.

#### PROCESSING.

A new approach to the problem of processing is essential if flawless negatives and perfect enlargements are to be produced from miniature negatives. Appreciating this, we have equipped ourselves exclusively to deal with the miniature negative. We pride ourselves that the results fully justify our policy.

Vol. LXXX. No. 2450.

THE lantern season, and the season for home cinematography, has now fairly started, and a glance at our list of society meetings, published in "The A.P." every week, indicates the steadily-growing number of lantern lectures given throughout the country. We have already commented on the growing interest in lantern-slide work, and there is every indication that the home cinematograph is also growing in favour, although more slowly. During the autumn and winter months, therefore, the projection side of home cinematography occupies the attention of thousands of amateurs, and even those who do not possess a taking camera, but have a projector, frequently put forward an attractive evening's entertainment with films that can be hired. The next issue of *The Amateur Photographer and Cinematographer* will be a Special Lantern and Ciné Number. The contents will be devoted largely to amateur cinematography, both taking and projecting, and to the optical lantern and lantern slides. A guide to all the apparatus that is available on the market for this purpose will be a feature, and many practical articles will be included. The issue will appear on Wednesday, October 30th, and our readers are advised to order their copies of this Special Number as early as possible.

### From the R.P.S. Chair.

The presidential address of Mr. Robert Chalmers to the Royal Photographic Society was like a pleasant breeze from the north. Disdaining manuscript Mr. Chalmers talked for an hour on earlier and later experiences of pictorial photography. Incidentally, he pointed out that there is much more straight

## TOPICS of the Week

A THAMES SNAP.

*Waterloo Bridge is slowly but steadily  
vanishing.*

photography now than there used to be. The big exhibitions contain a much larger proportion of straight work than was the case twenty or thirty years ago. The old gibe of faking is outworn, and this not because photographers have suddenly become converted to a higher moral standard, but because photographic material is now so much more amenable that it gives them all and more than all that they want without having to resort to devious methods. He mentioned the statement—probably true but impossible to verify—that there are in this country from three to five million users of the camera; yet probably all the photographic associations of whatever kind have not twenty thousand attached to them. Mr. Chalmers felt that the societies ought to "touch" a larger number of these outsiders, and he mentioned that in his own town of Sunderland they kept an eye open for promising local work, such as perhaps got reproduced in the newspapers, and tried to make the worker one of themselves. Mr. Chalmers gave some account of his own early pictorial education. He has been a great picker-up of second-hand books on the subject. His first book was by Abney, published fifty-seven years ago, a textbook of the science of photography, but with one "arty" chapter, probably not written by Abney, but perhaps by H. P. Robinson. One early work on landscape photography, which he purchased for a shilling, contained no hints whatever on the subject announced in its title, but it did teach him how to mend a broken bellows, and also had an interesting chapter on how to read the barometer. So perhaps the shilling was well expended.

**Before the Photographic Era.**

Mr. Robert Chalmers's researches into old literature led him to give two interesting predictions, if they may be so called, from works published long before the days of Daguerre and Fox Talbot. The first was from Archbishop Fénelon, of France, a writer somewhat of the H. G. Wells vein, who suggested how some mythical people got a reproduction of a portrait or a beautiful view or any other object. "Water was placed in great basins of gold or silver, and the object desired to be painted was placed in front of that water. After a while the water solidified and became a glass mirror, on which the image was fixed." That is all there is about it! That was in 1690, and in 1760 we have De la Roche, writing in a similar spirit of fancy, stating that a subtle viscous substance had been compounded which quickly dried and became hard. A piece of canvas was coated with this compound and placed in front of objects it was desired to depict. At first the canvas acted just like a

mirror; all objects, near and remote, which light had the power to portray, could be seen in it, but the canvas did what no mirror was able to do, it held the image fast through its adhesive properties. The canvas was then placed in darkness to harden.

**Exports and Imports.**

The excellent idea of Capt. A. C. N. Dixey, M.P., in proposing a system of scholarships to encourage technical advances in cinematography is inspired by the hope that we shall be able to grow our own technicians in this field without needing to import them from the States. But in photography itself, which is the mother and father and nurse and guardian of cinematography, we should say there have been more "exports" from this side than "imports" ever since the brains of C. E. K. Mees were drafted into the American industry now nearly thirty years ago. A. J. Newton and, for a time, F. F. Renwick, and many other names come to mind.

**The Length of the Lecture.**

The orthodox time for a lecture is one hour. No one knows how it came about. Probably it is a tradition derived from the universities, where anything longer than an hour would be considered intolerable by the students. The lectures at the Royal Institution begin and end at the stroke of the clock. We have, of course, known many lectures for which an hour was far too long, but lately we have listened to at least two lectures each of which went on for two hours, and when at the end of an hour and three-quarters or so the lecturer remarked apologetically that his time was up, he was urged unanimously to continue. Probably if it was a question of the voice alone, without anything to interest the eye, an hour would be long enough. But when a lecture is accompanied by lantern slides or films or demonstrations it may easily go beyond the time limit without boring anybody. On the other hand, there is a good deal to be said for travel lectures lasting a snappy half-hour.

# READERS' PROBLEMS

Selected queries on topics of general interest to readers will be fully dealt with on this page week by week. Other replies appear as usual on the last page.

**Hardening Solution.**

*You recently advised a reader about hardening negatives after development. Is there a reliable method of hardening before development? If so, will it work with prints as well as plates and films? What temperature will be safe?*

L. T. L. (Cambridge.)

We know of nothing better for the purpose than a solution known as Ilford Tropical Hardener, introduced some quarter of a century ago, and now manufactured by Messrs. Johnson and Sons. Dealers can supply it in 3-oz. and 6-oz. bottles. It can be used for all plates and films and for most bromide and gaslight papers.

For a temperature up to 90° Fahr. the solution is effective in a strength of 1 part stock and 7 parts water, but should be strengthened to 1 part and 4 parts for higher temperatures up to about 100° Fahr. When the working bath is prepared the plate or film is immersed dry, and subjected to the action of the bath for three minutes, after which a brief rinse is necessary. Development, fixing and washing can then be proceeded with, and there is no fear of softening, blistering or frilling.

When the stronger solution has been used the normal development time generally has to be increased by one-half; with the weaker solution, by one-third. As the solution keeps indefinitely, and can be used over and over again, the cost of the treatment is negligible. The time taken for the preliminary treatment is made up many times over, as considerable heat can be safely applied to expedite the drying of negatives or prints. The treatment therefore has its advantages even when work is being done under conditions of normal temperatures; at high temperatures it is invaluable.

**Negative Emulsions.**

*Could you give me an elementary idea of the composition of the emulsion on a plate or film, and of how the negative image comes about? It is a mystery to me.*

R. R. B. (Leith.)

It is quite easy to grasp the simple facts, although emulsion making is a highly technical business.

Suitable gelatine is soaked in cold water till swollen, and then made into a solution with more water, gentle heating, and stirring. In this gelatine solution is dissolved a certain quantity of bromide.

Next a given quantity of silver nitrate is dissolved in water, and added slowly to the gelatine-bromide solution, in which silver bromide is at once formed, and with stirring becomes equally distributed through the "emulsion" in the form of minute crystals. The silver bromide being sensitive to light a "safelight" must be used for these operations.

The quantities of the ingredients in an emulsion have to be most carefully balanced according to its purpose, and the emulsion is "ripened" by the application of heat. The higher the temperature and the longer the time, the greater the speed—within limits. The emulsion is coated on to glass, celluloid or paper, and dried.

When light acts on the emulsion there is no visible effect on the silver bromide, but some change has been made, so that when a suitable solution (developer) is applied the bromide separates from the silver, which is left in the form of minute metallic particles. This occurs in proportion to the light action and the development time, and thus the image is formed.

This is a bare outline of the matter, and many details have been omitted entirely so as to make the main idea stand forth. Many difficult problems arise, and some of them have not yet been satisfactorily solved.

# The Contrast, Surface, and Colour of the Print

The range of papers provided at the present time provides the photographer with a very definite means of controlling his effects in the final result. The factors which perplex the beginner are dealt with in the following article, which should be read by all who make bromide prints.

IN these days when most photographers make use of a camera of small size, and rely upon enlargement for the production of prints many times the size of the original negative, the choice of bromide paper is a matter of considerable importance.

There is now such a wide variety of paper that the needs of almost any negative are met, and the most fastidious photographer has no cause to complain either of the variety or the quality offered him. The beginner, however, is likely to be perplexed as to which paper will prove most suitable for his purpose.

Modern bromide papers provide not only for the needs of negatives of specific type, but they allow the photographer to exercise control over the contrasts of the print, while the different surfaces and colours again offer alternatives enabling any desired effect to be produced.

## Speeds and Contrast.

The first point that needs consideration is the speed of the paper. There are no fixed standards, and the products of one maker are not comparable with those of others. All the leading makers of bromide papers, however, issue at least two grades—(1) "rapid" or "normal," for negatives with a good range of contrasts and medium density, of the type recognised as the best for enlarging, and (2) "slow" or "vigorous" paper, intended for those negatives that are thin or weak in contrast.

There are also other papers between these grades which are made to give the best prints from negatives which are not exactly suited to either, or for the purpose of giving stronger or softer contrast, for the needs of special subjects.

The use of a paper of the correct

grade affects the colour of the print as well as its technical quality. For example, a rapid paper used with a thin negative results not only in the print being weak in contrast, but it will also be of a poor colour.

On the other hand, if the print is made upon a paper too hard and contrasty for the negative, the shadows will be black and the highlights blank paper.

## Surface and Definition.

The photographer who would make the best prints cannot afford to ignore the important part played by the surface of the paper. This is not a matter of some surfaces being "artistic," but the surface of the print controls the rendering of the details of the subject. They can be shown with almost microscopic sharpness, or they can be suggested rather than defined.

For example, if the beginner is able to make several prints from the same negative, other things being equal, he will find that in a glossy print almost every detail is clearly shown. In a smooth matt-surface print the details are less clear. If a rougher paper is used the finer details are lost, while in the case of a very rough paper, such as is used for very large prints or for those subjects which are on the large scale, still larger detail disappears and the entire effect is "broader."

Although no fixed rules are possible, it may be said that, apart from those cases where the utmost amount of detail must be shown (as is the case when prints are to be reproduced, when a glossy surface paper is obviously necessary), the small print is best rendered upon a smooth semi-matt or "satin" surface paper, and larger prints that are to be viewed from a distance will be seen to good advantage on rougher surfaces.

The points dealt with above apply with even greater force to enlargements from miniature negatives. The fact that the grain of the negative is enlarged, as well as the details recorded by the lens, has often to be taken into account when very large prints are made from very small originals.

In spite of "fine-grain" films and "fine-grain" development, some measure of granularity is inevitable with extreme enlargements, and the choice of a suitable paper can sometimes "dodge" the grain very effectively. If the subject will permit, a rough paper will cause the grain to become almost invisible.

## The Colour of the Base.

The photographer who wishes to convey any effect of warmth in his prints will do well to consider the use of a buff or cream base paper. Obviously this type of paper is not the best for all subjects, but for those in which it is necessary to suggest sunlight it is invaluable.

For portrait work, and especially large head-studies, a rough surface paper of cream base will assist in giving character to the print. Such a paper will not do, however, for child portraits, or for marine or snow subjects.

Sepia toning is very effective in the case of prints upon cream papers, although it is by no means necessary.

## In General.

From what has been written it will be seen that the photographer who is to be the master of his medium will have to consider the effect of papers of different character. Those who scorn to introduce any form of hand-work into their prints will find that the choice of a paper, and a study of the effect of its surface and its colour, will place a power in their hands over the result that is not often realised.

# A New Method of Indexing and Storing Miniature Negatives

By BERNARD ALFIERI, *Jr.*

WITH the increasing popularity of miniature cameras using ciné film, such as the Leica and Contax, the question of storage of the tiny negatives in a convenient form may be of interest to many readers of "The A.P."

The negative strips of 35 exposures are so easy to roll up and replace in the small tins used to pack the original films, that it is not until we have several dozen such tins holding a large number of exposures that we realise how difficult it is to find any given picture. Any ordinary index system under these conditions would be too vague to offer much assistance.

The longer the problem is put off, the more time it will take to start an index, and to embark on a method and decide to change it at a later date will result in an appalling amount of work.

It is definitely not advisable to cut up the negative strips into single pictures, or difficulty will be experienced when using many types of enlargers. Also, due to their very small size, such single negatives are easily lost.

The problem can, however, be readily solved by adopting the following method, which has stood the test of considerable practical use, and combines an index system and storage box in one.

A good quality index box complete with cards and alphabetical tabs may be purchased for a few shillings at any stationer's, and it is worth paying a little more to have a metal one which will not only be damp-proof, but also

Fig. 2.

offer protection to a considerable extent against fire.

The standard size for index cards will allow two strips of three negatives each to be held across a card, and films cut into this length are a convenient size for handling in an enlarger.

To begin with, strips of cellophane, or semi-transparent greaseproof paper used for ordinary negative bags, are pasted on one side of the card, as shown in Fig. 1. The negatives (in threes) can be easily inserted behind these strips, and it will save trouble if, instead of cutting the paper, the actual quarter-plate negative bags are cut in half and pasted on the cards as shown in this illustration.

On the other side of the card, contact prints from each set of three negatives can be mounted as shown in Fig. 2, or the space can be utilised for writing the title and index number, if a separate index card system is required as a cross check.

The ideal is to have both the contact prints and the description. With this on one side of the card and the negatives on the other there is no possible chance of confusion—provided the negatives are returned promptly to their proper cards immediately after use.

It will take a little trouble to get this method working, but once all the cards have been pasted up it is a very simple system to drop the cards complete with negatives behind the correct letter and see at a glance any photograph that may be required. My own box, which measures 6×7 inches, holds roughly 500 cards taking six exposures on each, making a total index storage space for over 3,000 negatives.

Fig. 1.

## YOU CANNOT DO BETTER

### ALL OUR SHOPS ARE LEICA SHOPS

#### THE NEW MODEL IIIa LEICA

Shutter Speeds 1 to 1/1,000th sec.

The Precision Camera.

F/2 Summar, automatic focussing, interchangeable lens mount, all chromium plated ..... **£43:0:0**

Nine monthly payments of 100/6.

Model III, f/3.5 Elmar anastigmat, automatic focussing, interchangeable lens mount, self-capping focal-plane shutter, speeds 1 to 1/500th sec., T. and B. .... **£31:16:0**

Nine monthly payments of 74/2.

#### SPECIAL OFFER OF 3 1/2 x 2 1/4 KORELLE ROLL-FILM CAMERAS GUARANTEED NEW!

F/4.5 Radionar anastigmat, delayed-action Compur shutter, speeds 1 to 1/250th sec., T. and B. Self-erecting front lens focussing movement, 3 1/2 ft. to infinity. Optical direct-vision finder. Very neat and compact. Present-day value £9 15s. 6d.

Special Price **£5:18:6**

Nine monthly payments of 13/10.

#### The LEITZ "FOCOMAT" ENLARGER

With Automatic Focussing.

Takes the standard 5-cm. focus Leica lens, screw in fitting, automatic focussing adjustments scaled from 2 diameters up to 10 diameters. Will take negatives 18x25 mm., 24x36 mm., 3x4 cm., and 4x4 cm. Metal masks can be supplied for any of these sizes.

**£16:6:6**

Ninemonthly payments of 38/1.

#### LEITZ VALOY ENLARGER

**£9:11:6**

Nine monthly payments of 22/4.

# THE CARBRO PROCESS

## IN BRIEF

By  
A. P. E. KENT.

Now the winter season is nearly upon us, the keen worker looks round for fresh fields to explore. It is an opportune moment, therefore, to draw attention to the Carbro process, which enables carbon pigment prints in any colour to be made in any size without the aid of daylight. The following article describes the working details in brief.

IT is surprising that the Carbro process is not more widely used, for, without being difficult, it gives beautiful prints in a variety of colours. And, apart from monochrome prints, it is used in the most popular method of obtaining colour prints. If any one contemplates taking up colour photography next season, he would be well advised to learn the Carbro process this winter.

The basis of the process is an ordinary bromide print or enlargement. This should be on a smooth paper, correctly exposed and fully developed, fixed and washed. The size of the bromide print decides the size of the Carbro and should be made accordingly.

The dry bromide print from which the Carbro is to be made is placed in a dish of clean water, until it is perfectly limp. A piece of Carbro tissue, which is bought ready coated in any desired colour, is cut so that it is  $\frac{1}{4}$  in. larger than the bromide print in each direction.

This is sensitised in the following bath:

#### SENSITISING BATH. STOCK SOLUTION.

Potassium bichromate ..	1 oz.
Potassium ferricyanide ..	1 oz.
Potassium bromide ..	1 oz.
Water to ..	20 oz.

For use, 1 part of stock solution is diluted with 3 parts water.

The Carbro tissue is sensitised by immersing it in the above bath for three minutes at about 65 degrees Fahrenheit. While the tissue is sensitising, the bromide print is taken out of the water, drained, and placed on a perfectly flat surface, such as a sheet of glass, or a ferrotype plate.

At the end of the three minutes, the tissue is removed from the sensitising bath, drained for 15 seconds, and then placed in the following acid formalin bath:

#### ACID FORMALIN BATH. STOCK SOLUTION.

Glacial acetic acid ..	1 oz.
Hydrochloric acid, pure ..	1 oz.
Formaldehyde, 40 per cent	22 oz.
Water ..	2 oz.

For use, 1 part of stock solution is diluted with 32 parts water.

The time the tissue remains in this bath determines the quality of the final print.

If a hard result is aimed at the time of immersion should be 15 seconds. If a normal result is aimed at 20 seconds' immersion should be given. Finally, a soft result can be obtained by 25 seconds' immersion.

The tissue, after immersion in the acid formalin bath, is placed face down on the bromide print, and firmly pressed into contact with it, film to film, with a rubber squeegee or a rubber-rollered mangle, taking care that it does not shift after once being in contact.

The tissue and bromide are then together lifted off the glass or ferrotype plate and placed between greaseproof paper. A large book is placed on top, and they are left undisturbed for a quarter of an hour.

Meanwhile, the "final support" paper (which should be obtained at the same time as the tissue) is placed in a dish of fresh water, so that it may be quite limp when wanted.

At the end of the fifteen minutes the transfer of the tissue from the bromide print to the final support takes place. The final support, in a limp condition, is laid on a perfectly flat surface. The tissue is stripped from the bromide print by first lifting one corner of the tissue, and then firmly and steadily pulling it away cleanly.

The tissue is then placed face down in the correct position on the wet final-support paper, and squeegeed into contact. The two are then sandwiched between clean blotting-paper, and left under the pressure of a large book for half an hour.

At the expiration of that time they are removed from pressure and placed in water at 95 degrees Fahr. When the pigment begins to ooze out the tissue is stripped off as it was from the bromide print, but this time under the water, and leaving a mass of carbon pigment on the final support.

The original backing of the tissue is then thrown away, and the pigment on the support is washed away in running warm water, or many changes, till all muddiness goes and

the picture shows up clear and clean with all tones and detail. When it is satisfactorily developed it is placed in a 3 per cent alum solution, until the yellowness has cleared. It is then hung up to dry.

Now as to how to recognise faults. The quality of prints is controlled by the time of immersion in the formalin bath. Over-immersion is shown by too soft results, under-immersion by too hard results. If any spotting is necessary, special pigments to match the tissue can be obtained from the maker of the tissue, or a little of the pigment adhering to the original backing of the tissue can be saved for the purpose.

The process is not wasteful, for the sensitising solution, if strained after use, can be used time and time again, and the "developer" is plain hot water. The bromide print can, after thorough washing, be redeveloped, and form the base for another Carbro. But the formalin solution must be fresh each time.

Although a Carbro print takes a little longer to make than a bromide, it is well worth the extra trouble; it has a quality of its own, while for control of the quality and colour of the print it stands alone.

The original carbon process involved contact printing by daylight. This meant that the size of the print depended on the size of the negative, and this often necessitated making an enlarged negative. In any case, a negative for carbon printing had to be strong in quality, and there was very little control over the contrast of the resulting print.

Carbro makes the process independent of negative size, as instead of the production of a large negative it is only necessary to make a direct bromide enlargement of the required size, and the whole procedure is independent of daylight.

As to the application of the Carbro process to the production of colour prints, this involves the making of three different negatives of the subject. Details of this interesting process can be obtained from the Autotype Co., 59, New Oxford Street, London, W.C.1.

of these lamps that snapshots are easily within the compass of a camera with an  $f/4.5$  lens, and a little experience will give the general distances between model, light and camera for a given exposure. But it must always be

"CONVALESCENT." One photoflood in reflector on bed 3 ft. left. Another photoflood lamp in ceiling bowl above. One 60-watt ordinary lamp in lampshade. Exposure,  $1/25$ th sec. at  $f/4.5$ . S.S. pan. film.

WHERE the house is wired for electricity, the newest form of indoor photographic lighting for amateurs—photoflood lamps—is certain of increased popularity during the present season. Starting two years ago at six shillings, these useful bulbs are now priced at half a crown, and although their "continuous burning" life is very short it is intended that they should be used for the actual exposure only. All previous arrangement can be made by the ordinary room lighting, and the photoflood lamp just slipped in for the necessary period.

To my mind, this is the ideal form of lighting for that happy and intimate field so popular during the winter months, family and home photography. Flashpowder first opened this up, but the new illuminant does not cause any strain among models when waiting for the "flash," and, indeed, the absence of the latter makes the photography of animals very much easier. I had one dog who would not face a camera on any account owing to having been frightened by this and ever after associating the camera with flash-light.

Photoflood lamps are most efficient when used in one of the special reflectors costing only a few shillings and marketed by at least two of our largest manufacturers. These increase the value of the light about two and a half times, and usually two will be employed at different distances, the nearer one forming the main light and the second farther away, to lighten the shadow side. Or one reflector and one "open" lamp form a good combination, with perhaps a white sheet or card as a reflecting surface for large areas of shadow. A convenient device is that of having the "open" lamp on a long loose flex so that it can be hung in any convenient position in relation to one's models. If there is no means of hanging the lamp an assistant can hold it for a short period.

Fast panchromatic films or plates are so sensitive to the high actinic discharge

"THE HOME WORKSHOP." One photoflood lamp in reflector 5 ft. front on a lead from the kitchen. Camera, 7 ft. Exposure,  $1/10$ th sec. at  $f/3.5$ .

"JUST A SPLASH." One photoflood lamp in reflector 4 ft. right. A second photoflood lamp in front above at 3 ft. Camera, 6 ft. Exposure,  $1/50$ th sec. at  $f/3.5$ .

borne in mind that the exposure is as the square of the distance. That is, an exposure of  $1/25$ th with a lamp at 3 ft. becomes one of  $1/5$ th when the lamp is moved back to 6 ft. A good general exposure with two lamps, light subject and walls, would be  $1/25$ th at  $f/4.5$ , assuming the main light to be 4 ft. from the chief object.

Miniature cameras are undoubtedly particularly useful for this very interesting work, not only because of the large apertures with which they are usually fitted but their increased depth of focus enables one to keep nearer to a family group without stopping down.

October 23rd, 1935

# Photography flood Lamps

This in turn means a shorter exposure. While it is not natural that the figures of a group should all be on one plane, it is naturally helpful if they are not spread out too much from front to rear.

A great sense of realism can be obtained in drawing-room and bedroom photoflood photography by employing standard or table lamps as units of the composition and fitting them with a 40 or 60 watt lamp for a  $\frac{1}{25}$ th sec. exposure and a 25-watt for one at  $\frac{1}{10}$ th sec. They then appear in the

"THERE'S ABYSSINIA." One photoflood lamp in reflector 4 ft. right (showing). A second photoflood lamp in ceiling bowl. Camera, 8 ft.  $\frac{1}{25}$ th sec. at f/5.6.

"COOKING." One photoflood lamp in reflector 4 ft. front, and a second lamp behind figure, 1 ft. away. Camera, 4 ft.  $\frac{1}{25}$ th sec. at f/3.5.

judged and alterations made where necessary. But they should never be left on for very long periods, as, apart from burning out, such tremendous heat would be generated that the bulb glass will come away from its metal holder.

Naturally, it is helpful if walls are light and figures clothed in light colours, but this in conjunction with the powerful lamp shining at close quarters means that negatives must not on any account be over-developed.

"THE LIBRARY." One photoflood lamp in reflector 3 ft. front right only. Camera, 5 ft. Exposure,  $\frac{1}{5}$ th sec. at f/8.

print as the chief high-light without being unduly exposed. Of course, where a particularly heavy shade is employed or an additional light is required to assist with the exposure a photoflood bulb can be used in the lamp.

Although, as previously mentioned, these lamps should only be used for the actual exposure, it is undoubtedly one of their great advantages that they can be switched on so that the effect of the placing of lamps and figures can be accurately

# NEWS AND REVIEWS

ITEMS OF GENERAL INTEREST FROM ALL QUARTERS.

We have received two interesting and finely illustrated brochures, published by Messrs. Zeiss Ikon, and would advise readers to obtain copies through their dealers. The first is a detailed account of the Super Nettel camera, and its various accessories, with much information on manipulation and so on. The second deals with the Contameter—a focussing device for close-up objects. It can be fitted to both the Super Nettel and the Contax, and some wonderful results can be obtained with its aid.

An exhibition of photographs by several prominent workers is open until the 31st inst. at the Chelsea Studio Club, 183B, King's Road, Chelsea. The hours are 11.30 to 6.30.

Mr. Donald McLeish has just issued a new catalogue of his famous "camera pictures." To the number of some 2,600 they cover many countries, and illustrate travel, places and buildings of historic interest, native life and figure studies, Alpine scenery and mountaineering, beauty-spots, etc. The prints are 10x8 in size, and those who know Mr. McLeish's work recognise that they stand practically unrivalled for beauty,

variety and technical perfection. Those requiring such prints for reproduction or collection should communicate with their author at 63, Marquess Road, Canonbury, London, N.1.

The Blackpool and Fylde Photographic Society reports a successful year's work. The membership has increased from 83 to 105, and a deficit at the beginning of the year has turned to a considerable balance in hand at the end. The headquarters are at 41A, Market Street, Blackpool, and the new Hon. Secretary, B. D. Taylor, will be pleased to send particulars to all who wish to join. His address is 112, Topping Street, Blackpool.

Civil Servants who are interested in photography are invited to note that they may join the C.S. Federation Portfolio Section at any date between now and the end of 1935 on payment of the 1936 subscription of 3s. This will entitle them to receive the Federation quarterly portfolios as from the date of joining, while the "C.S. Photographer" will be supplied free during 1936. The Portfolio Section consists of six regional

groups (another will probably be formed next year), including C.S. photographers of all stages of proficiency in every branch of the Service. Enquiries should be forwarded, accompanied by a stamped addressed foolscap envelope, to Mr. F. M. Chapman, Ministry of Labour, Whitehall, S.W.1.

Owners of 16-mm. home cinema projectors are reminded that the Scottish Travel Association, of 2, North Charlotte Street, Edinburgh, 2, maintains a library of 16-mm. scenic films showing many different parts of Scotland. These films are available for loan to responsible persons, only postage being charged. A list of the films may be had on application to the address given. The same Association is also prepared to lend sets of lantern slides, with accompanying notes which form the basis of a lecture. Both film library and slide collections have been augmented since last winter.

The Bethnal Green Camera Club, which meets on Wednesday and Friday evenings at the Bethnal Green Men's Institute, 229, Bethnal Green Road, E.2, has commenced its winter session. An attractive programme has been arranged, and new members will be welcomed. A well-equipped dark-room is provided. For particulars apply to Mr. F. W. Young, 15, Hampden Road, Hornsey, N.8.

## Letters to the Editor

The Editor is not responsible for the opinions of his correspondents.

### MY IDEAL CAMERA.

SIR,—The ideal camera does not exist and probably never will, but I obtained a close approach to it in 1919.

It is 2½ in. square, a size which I quite agree with A. A. Pizey will soon be the most popular.

It is a folding pocket camera for the six-exposure spool (an Icarette) and has a cross front movement which, of course, becomes a rising front movement when the camera is used on its side, this not being a material point as the picture is square.

The wire frame of the finder is attached to the lens panel and moves with the lens, thus showing the correct amount of view obtained whether using or not using the movable front.

It is wonderful what only half an inch of rise makes on a 2½ square picture; it is sufficient for nearly all architectural subjects, unless exceptionally high, and even these gain by it and usually become passable and reasonably free from that objectionable toppling-over appearance.

It also has lever focussing to 3 ft., f/4.7 lens and 3-speed ever-set shutter. Although I should prefer more speeds, I like the ever-set shutter, as one operation is saved, and a setting lever is another thing to think about, or forget about!—Yours, etc., R. KIRKBY.

### TROUBLE WITH ROLL-HOLDER.

SIR,—S. G. J.'s trouble is clearly, as Mr. Pritt has pointed out, due to the film not being held in the focal plane. From my own experience I should judge that there is some backlash on the winding-gear, which allows the film to become loose. This should be put right, but its effect can be minimised by fitting a strong spring on to the spool on the winding-gear, or by wedging it by cardboard washers to stiffen the winding and make it less likely for the film to become loose. Any of the repairing firms advertising in your columns would put this small matter right.—Yours, etc., R. E. DICKINSON.

### A SUB-STANDARD LANTERN WANTED.

SIR,—In these days when the craze for the "miniature" holds sway in almost every field from cameras to motor cars and houses, and when the scramble for business in the photographic field produces new models in cameras, enlargers and other photographic appliances, not to mention materials, almost daily, is it not strange that such a gap should remain unfilled as that in the lantern-slide and projecting-lantern sphere?

We have available nothing but toys other than the 3¼x3¼ projector, and to the best of my belief no lantern-slide plate or film is marketed in any smaller size.

I suggest that there is room for a series of "sub-standard" still projectors and slide-making materials to correspond with the "sub-standard" ciné. The 3¼x3¼ apparatus is quite unsuitable for use in the modern small house, which usually contains no room large enough for projection nor storage space to make the bulky projector a welcome piece of equipment; the lower cost of slides would also be an added inducement to participate in the process which is admittedly the most beautiful method yet achieved of viewing a photograph.

Will not some progressive manufacturer provide us with something to fill this gap? I would venture to suggest slides of 1½x1½, and a simple projector using, say, the Pathé Home Movie projection lamp and giving a 4-ft. picture at about 8 or 9 ft. throw.

This would, I think, give ample illumination without an expensive large-aperture projection lens, and the whole job could be kept compact and inexpensive and yet be a perfect companion for the small ciné outfit, using the same screen and in many cases the same transformer or resistance, and thereby effecting further economies and encouraging sales.

As the area of the proposed size of slide is about 1/5th of the standard size, would it be too much to suggest that these could be marketed at rather less than half the price of standard lantern plates?

Finally, the suitability of the suggested size of slide for contact prints from miniature negatives from 2½ square downwards, hardly needs comment.—Yours, etc., K. A. HELLON.

# How I make my EXHIBITION PICTURES

Methods and Ideals of well-known Pictorial Workers.

No. CCCIV.

Mr.  
YAHYA ARIF.

From information communicated to our Special Representative.

"I CANNOT say definitely when I began photography. Nearly as long as I remember I always had a camera of sorts, but it was not till 1921 that I got my first serious camera—a Contessa Nettel—and took up photography in earnest. After a few years, not being able to give as much time to my hobby as I wished, I left it off gradually, taking a few snapshots from time to time.

"About three years ago, having acquired a second-hand Rolleiflex, and its extreme simplicity having captured my interest, my enthusiasm awoke again, and has been increasing since I sent my first print to 'The A.P.' Intermediate Competition.

"I usually work with the Rolleiflex, but I prefer a 6×9 cm. Mentor reflex, with f/4.5 Tessar lens, for portraiture, as the longer focal length of the lens

gives better modelling. I invariably use panchromatic material, with a light filter to suit the subject, as I find that I get the truest tone rendering in this way, and the gradation is beautiful, especially in the Orient, where you get either too much contrast early in the day, or none at all at midday.

"I develop my films in an Optochrom tank with Johnson's fine-grain developer, and the plates in a dish, usually by time and temperature; but in special cases I desensitise with pinacryptol green and develop by inspection.

"I have a vertical enlarger with two interchangeable lenses. If even the shorter focus lens does not enlarge enough I undo the screws that fasten the enlarger to the baseboard, and turn the apparatus right round so that it points to the ground. In this way I obtain enlargements of more than twenty diameters.

"I enlarge all my suitable negatives, noting the modifications to be made, shading while enlarging, reducing the high-lights, etc. I always try to get the best I can out of the negative, and do not mind 'wasting' a few sheets of paper to get the picture exactly as I want. I rub the print with dope, and before this dries I darken the areas which require it with blacklead or charcoal, using a stump or a piece of cotton-wool. When dry I spot with water-colours. All my photographs are straight except for the slight modifications mentioned.

"Modern 'stunt' photography I do not like. Try as I may, I cannot see any beauty in rows and rows of pitchers, or barrels put one on top of the other. It is merely trying to be successful by being different. Photography, like any other art, needs serious study to be worthy of notice.

"I get all the photographic books and annuals I can. I read *The Amateur Photographer* regularly, and send pictures to the monthly competitions. The criticism of the prints helps a lot, especially as there is not a photographic society in Cairo, so that I cannot get any opinion on my pictures, which I think is very necessary for successful work."

(A further example of Mr. Arif's work is reproduced on one of the centre Art pages.)

A BEDOUIN ARAB.

# Pictorial Analysis

Every week the picture reproduced on the art page opposite will be analysed in detail for the benefit of readers of the paper who are seeking to improve their pictorial work.

"STILL LIFE," by Kathleen M. Caudwell.

IT has often been remarked in these columns, in discussing work of Oriental origin, how sparse the subject material has been in relation to the effect and finish of the picture as a whole, and the suggestion has also been made that the lessons to be learned from such examples might have an influence over the arrangement of still-life subjects coming from home sources.

In its general make-up; in the paucity of its subject material; in its preciseness of placing; and in its concentration of effect, this effort of Miss Caudwell's seems to betray such an influence, and, although it may not be conscious, nor is there a suggestion of anything in the nature of deliberate imitation, it does seem as though the principles of the East have been here applied. The character of the subject matter, nevertheless, is so familiar that it indicates its native derivation. In the arrangement, too, the choice of position for the group of tools seems to follow the traditions of Western ideas of composition, so that, in the sum, both schools seem to find expression, and the virtues of each have been admirably utilised.

The group in question (1), as will be observed, occupies a position athwart one of the intersections formed by horizontal and vertical divisions of thirds. This position, assuming that the other three points of intersection are either unoccupied or nothing of significance occurs thereon, is forceful, and, from the Western standpoint, is regarded as one of the conventional strong placings for the principal object and centre of interest. Here, there is no suggestion of competition, and the priority of the group is assured.

It is, however, further regarded as essential that in the group itself there shall be a sense of order, and this is evident from the fact that, of the three elements, the broom, in view of

its proximity and greater scale, naturally assumes predominance; the spade, being next in order of position, is of secondary importance; and the fork, as the most distant item, is of lesser significance still, but is necessary to complete and round off the formation. Its pyramidal character is readily apparent, and a further measure of

The latter, with its moderate gradations and unobtrusive lines in opposition to those of the group, lends a further touch of strength, and completes a well-balanced composition.

If the arrangement were assessed from the Oriental standpoint, it would no doubt prove equally successful. It would, however, be a matter of taking each individual item and placing it in a definite relationship with each and every other element, and also with the pictorial boundaries. Moreover, the different masses of tone, such as the foreground, the setting, and the shadows of the foliage, would count as elements to be considered just as much as such actual objects as the broom or spade or fork.

Any one or other of these might be taken as a point of commencement. Its position in relation to the picture space would be provisionally fixed, and the other items introduced one by one, the position of each being adjusted with every fresh addition until the whole of the pictorial area was fully and satisfactorily filled.

To some extent, the relationship of the hoarding, its shadows and the foreground would be fixed by their immobility and existing relationship with each other, but their placing in the available space would be variable according to the point of view, and, the right-hand side being chosen for the shadows, the disposition of the foreground along the

base and slanting upwards, would naturally follow.

It would then be found necessary to introduce another element in the neighbourhood of (1), first, to fill a somewhat vacant space, and, secondly, to prevent the repetition of the vertical lines of the planks from becoming either monotonous or over-assertive. The probability is that the group, as it stands, would prove adequate, for it provides an equable balance throughout.

"MENTOR."

strength is acquired on this account. It may be a little obvious, but there is an adequate excuse in that it is more or less inevitable in view of the predominance of straight lines in the elements themselves.

At all events, the power with which the group is endowed—attributable to this formation and the placing—is amply sufficient not only to give it the attraction that is its due as the primary centre of interest, but to separate it efficiently from the setting.

# PICTURES by Novices

*SOME CRITICAL COMMENTS on  
the Beginners' prints reproduced on the opposite page*

**T**HE BULLOCK CART," by A. Firth—No. 1 of the prints reproduced on the opposite page—attains a measure of success, inasmuch as it presents its subject, which is a relic of the past, quite clearly and well. Nevertheless, its ancient character makes it inclined to be out of harmony with the setting, particularly having regard to the modern posters and advertisements with which the structure in the rear is embellished.

## **Anomalies in Material.**

These posters—and to some extent, the figure itself—are anomalous, and out of keeping with the bullocks and their cart. The two elements belong to different periods, and are incongruous in the same picture.

In order that a group of this kind may be made into a picture, it is desirable that the setting shall not only serve to show it up, but also that it should be akin in character. A roadside of a wholly rural type would, for example, be perfectly suitable, or, in a town or village, there would be no suggestion of disharmony if the architecture were old and free from any modern disfigurements.

The difficulty is, however, to get the group and the desired setting together. It will usually be found that if the group appears, the setting is inappropriate, and, if a suitable setting is chosen, there is nothing in the nature of a group.

Still, it does sometimes happen that the two occur in conjunction, and then it is a case of getting them then and there with the minimum of delay. Very often, a chance is lost through not having the camera ready for action, but, on occasion, the reverse is the case and the resultant picture is its own reward.

## **Features and Figures.**

Even then, the figure is generally a source of incongruity. Something happens to date it, and it has been known for the teamsman in charge of a similar group of oxen to march round in a bowler hat!

An experienced worker, in a case like

this, might be able to turn the offending headgear into a slouch hat, but such an expedient is beyond the beginner, and he is compelled to exercise discrimination in choosing a model at the time of exposure.

At the same time, it must be admitted that this is a counsel of perfection, and, making due allowance, the print under discussion does, at all events, show an appreciation of the right moment for making the exposure, for the group is well placed in the picture space, is of a decent scale, and is not too badly set off by the background. It makes quite a good record, and, if that be the aim, well and good; but, if the intention is pictorial, it can only be said that, for the reasons that have been indicated, it does not achieve its end.

It is, however, technically sound, and so is its neighbour, No. 2, "Drought," by N. How, but, here again, the æsthetic side does not reach the level it might.

Properly arranged, the sunlight on the cottage wall might have been made to rank as an effect, but it would have to be placed more *in* the picture, and some means would have to be found to avoid making such a feature of the stone wall in the foreground.

## **Stance and Subject.**

It might be inferred from the presence of the shadow in the foreground that the viewpoint was somewhat circumscribed, and that one a little farther off was impracticable.

That, however, is what is needed, and, at the time time, the line of sight should be directed more to the right. Whether such an adjustment is possible or not could, of course, only be determined on the spot, but the idea should be to reduce the scale on which the wall is shown, to bring the sunlit wall more towards the centre of the picture, and to take a greater advantage of that useful shadow at the base.

No. 3, "The Half-open Door," by A. G. Dabbs, seems to need a similar change of viewpoint, for there is a like deficiency of foreground, and the print lacks stability in consequence. The sunshine tells to better effect, for its brightest expression is well

within the picture and does not exhibit the running out inclination of the former.

On the other hand, No. 4, "Awaiting the Thaw," by R. H. Guest, is better spaced—a feature which it owes to the stance being sufficiently distant—and there is not the same suggestion of restriction.

## **Placing and Spacing.**

The dark bottom right-hand corner, perhaps, is not altogether satisfactory, but, apart from this, the arrangement is sound, though the diagonal line from the left to the top right is inclined to be insistent.

If it were more broken it would be equally strong and the effect decidedly better, but both the placing and spacing of the boats are admirably calculated.

In the upper part of the picture, some of the lighter tones are missing, and printing to a greater depth, if necessary, on a paper of less vigorous characteristics, would correct matters effectively. The same drawback appears in No. 5, "... falls the Eventide," by J. Scott, where the sky, which should show a plenitude of tone, is markedly deficient. Printing, in this case also, should be carried a stage or so farther so that all the tones of the sky are fully represented.

With the greater depth in the sky, the print could carry a heavier foreground, and, if it does not go too dark, the same grade of paper could be employed, but, if it should, a softer paper should be chosen instead.

## **Depth of Printing.**

"A Wharf at Waterloo" (6), by J. Moore, is not so far out, but a greater depth of printing would be beneficial as it would tend to emphasise the distinction between the white buildings in sunlight and the sky.

The effect, here, is very well seen, and the arrangement of the boats in the foreground is exceedingly happy; but the chimney, while not exactly incongruous, seems to strike a too forceful note, and, had it been found possible to avoid its inclusion, not only would the composition make up more pleasingly, but the tone, in general, would achieve a greater degree of harmony. "MENTOR."

# With the Beginners

NOTES AND NOTIONS FOR THE  
LESS ADVANCED WORKER

Every week an article will appear under this heading dealing with a topic of interest to the novice in photography.

## BEGINNER'S LUCK.

A FORTNIGHT ago there appeared a "Topics" paragraph with the above title. It told a stirring story of a schoolboy who went for a day's trip, bought a five-shilling camera "on location" (as our ciné friends say), and from his first spool of film got two competition winners and a print that secured a reproduction fee. And very nice, too.

Such things are not by any means as uncommon as may be supposed, and the familiar expression "beginner's luck" has become proverbial. It must not be forgotten, though, that there are two kinds of luck; and the beginner who exposes a whole spool and does not get a single negative fit for anything but destruction does not get himself talked about. He generally does himself all the appropriate oratory.

I am going to say something about another schoolboy who may be said to have had beginner's luck. I will call him Eric, although by so doing I do not wish to cast any aspersions on him, or to hold him up to ridicule. There is nothing of the little-by-little style about him.

Eric seemed keen on doing a bit of photography, and raked me fore and aft with volleys of searching questions. As he was in the family I responded by giving him an Autographic Brownie with f/6.3 lens.

He had the good sense to read a little book of mine specially designed for little Erics at the very beginning

Fig. 2.

of their photographic journey, and one effect was to lead him to ask me whether his camera could not be fitted with a rising front. I told him that it was only old cranks like myself who bothered about such things, and suggested that on his holiday he should keep his eyes open for simple landscapes with or without figures, and for striking cloud effects. He did; and the three little spools he exposed would be no disgrace to many a so-called "old hand."

Anyhow, here are three samples. In Fig. 1 the cows are the making of the subject, although Eric said he was mainly attracted by the beauty of the trees—and no bad judge either. He was pretty smart on the trigger, too.

He also showed judgment by the introduction of the horseman and the dogs in Fig. 2. If anyone told him that the rider was too central he could truthfully reply that this is my fault, because I have cut a bit off the left side. It is an attractive little holiday snap, all the same.

Eric might have done still better with Fig. 3 if he had remembered that a subject

Fig. 1.

of such great contrast should have had more exposure and less development. It cost me three pieces of paper to get a print, but the one reproduced is untouched and "straight." Some of us would be only too glad to get such a picture, although it would not do to let Eric know as much.

Having seen all Eric's holiday pictures I maintain that, beginner or not, he did jolly well. But, in this case, was it all due to luck? I do not think so. Before starting the game he learnt a good deal about the rules, and did his best to abide by them. That is common sense, not luck; and a great many beginners would fare better than they do if they would adopt the same course.

When I began photography myself I had a great deal of "luck," but much of it was of the most vile and disconcerting brand. That is why I know so much of all the possible blunders and misfortunes to which the photographer is liable.

The chances of the beginner to-day are infinitely greater and better. So much has been simplified and standardised. Apparatus is more efficient, sensitive material immensely improved, print-

Fig. 3.

ing processes more varied and adaptable. Little Eric's have advantages and facilities unknown to their grandfathers. They are lucky in many ways.

The grand result is that in starting photography as a hobby the prospects of speedy success are much more rosy than ever before. But it would be the height of folly to rely on luck and mere chance. Fortune is a fickle jade. Plenty of guidance and advice is available for the beginner, and he should take advantage of it. And if he wants to do anything really worth while he must learn to stand on his own feet, and not to rely, except perhaps at the very first, on the assistance of others. He must not only take, but make his negatives. His prints should be his own work throughout. One of the worst kinds of beginner's luck is leaving his own ideas and purposes to the mercy of others.

It may or may not be a good thing for Eric to strike beginner's luck. If he takes it as encouragement, and an incentive to further efforts, well and good; but it will be a bad thing if he thinks the match is won because he hit his first ball to the boundary. W. L. F. W.

## A USEFUL TIP FOR DRY-MOUNTING.

THE modern method of mounting prints by the dry-mounting process has a number of advantages over the older way of using moist paste. Not the least of these advantages is the fact that prints can be mounted on very thin sheets of paper without any fear of cockling, whereas, when using paste, stiff card must be employed if bad cockling is to be avoided. This means that the photographic album is much less bulky than it used to be, and that is in itself a great gain in these days of "maisonettes" and "flatlets," in which economy of space is essential.

There is, however, one small difficulty that often makes itself felt when mounting prints on *both sides* of a thin sheet of paper, as is necessary in the case of an album. The print mounted on the first side sticks down perfectly well; but if the print which has to be placed on the other side of the mount is any larger than the first print, or if any of its edges overlap the space occupied by the print on the other side, then the edges of the second print will generally fail

to adhere to the mount. This is, of course, because the thickness of the first print is preventing a proper pressure being exerted at the edges of the second print.

The remedy is simple and never fails. A second pressure is made. But a piece of thin strawboard is first placed underneath the mount in such a position that it is exactly underneath that part of the second print that did not adhere at the first pressure. The thickness of the strawboard now ensures a perfect contact between the second print and the mount, and adhesion is perfect. A. M.

## REPLACING CAPS ON PHOTOFLOOD LAMPS.

A READER of "The A.P." in a recent number gave a useful warning concerning photoflood lamps, owing to the cap having come adrift. It is worth knowing that if this should happen, it need not always be a case of "bang goes half a crown."

In the first place the composition securing the cap to the bulb should never give way, and manufacturers admit the defect if this takes place. It has been

encountered considerably in the past with ordinary lamps, but has now been practically eliminated. So it may be worth returning the lamp to the makers if the cap has become loose.

Apart from this, the cap can usually be replaced. The cement used consists of a mixture of shellac, methylated spirits and chalk. The first two comprise the usual shellac varnish, which if added to the old cement after it has been removed and powdered will probably be all that is needed to reunite the parts. In doing this, however, the electric contacts must be attended to. The old solder must be removed at the top, by heating, so that the holes are clear. The wires may not be long enough to thread through these, in which case they should be cut a little shorter and an inch or two of similar copper wire joined to them by twisting and soldering. They must not touch each other or the metal cap. After the latter has been pressed firmly home, a little heat will help the setting of the cement. The wires should be soldered to the contacts, being turned down as originally. Finally, any surplus solder should be filed away, leaving the contacts quite flat. T. E.

# Picture Points

## for Beginners, by RICARDO.

### Mounting the Print

**A**LTHOUGH the composition of the subject matter in a photograph should be complete in the trimmed print, and should be judged as such, it will not be disputed that it shows to better advantage if it is suitably placed on a harmoniously and quietly tinted mount.

For the time being we will not concern ourselves with the tint of the mount but with the placing of the print.

It must be remembered that one cannot lay down the law for the correct position of a print on a mount, and while there are certain mathematical relationships of the margins, they do not apply to every print and the mount chosen for it. It must be left to one's sense of balance and proportion.

The first point the beginner should try to understand is that a print should never be placed on the mathematical centre of the mount, but on the optical centre, which is always a little higher but always in the centre between the left and right hand edges of the mount. Then the margin at the bottom will always be greater than the top, but with the side margins equal to each other.

Remember, too, that a mount should always be subordinate to the print, and never attract attention to itself by freakish mounting.

Remember, too, that a mount should always be subordinate to the print, and never attract attention to itself by freakish mounting.

### Grouping and Balance

**C**ONTINUING the short exercise in grouping in last week's series we now come to the point of putting the diagrams into practice. It will be remembered that of the series of six different groups, Nos. 4 and 5 were the most pleasing, while No. 6 was rejected because it divided the picture into two.

If we take Nos. 5 and 6 for our illustrations and substitute books and a shadow for the shaded rectangles, we can get a better idea of the difference between the two sketches. The illustration on the right resembles No. 5, and it will be noticed that the tones of all three shapes are similar. This has been purposely made so that no other factor will have to be considered.

A few minutes' consideration of those two arrangements will be sufficient to show that while each has good balance, both horizontally and vertically, the first sketch is undoubtedly the more pleasing since there is only one main point of interest and not two as in the case of the bottom sketch. While it is admitted that there is a shadow on the base to link up the smaller book with its shadow, this is not the factor which gives it unity. The main reason is that the first sketch has a larger mass to attract and hold the attention, whereas the second sketch is divided into two masses of a more or less equal "weight," and it would be quite possible to cut the picture down the centre and make two separate prints, a thing that should not be possible with a good composition.

A few minutes' consideration of those two arrangements will be sufficient to show that while each has good balance, both horizontally and vertically, the first sketch is undoubtedly the more pleasing since there is only one main point of interest and not two as in the case of the bottom sketch. While it is admitted that there is a shadow on the base to link up the smaller book with its shadow, this is not the factor which gives it unity. The main reason is that the first sketch has a larger mass to attract and hold the attention, whereas the second sketch is divided into two masses of a more or less equal "weight," and it would be quite possible to cut the picture down the centre and make two separate prints, a thing that should not be possible with a good composition.

### What is Wrong with the Composition?

**H**ERE is a simple exercise in composition analysis. The top sketch is a combination of several faults, each of which has been discussed previously in this series.

The first thing to do is to find the main point of interest and see if it is as strong, pictorially, as it might be. Of the two objects, the man and the tree, one must give priority to the man because, although the tree is much larger, of a more interesting shape, and on a relatively stronger position in the print, one is more attracted by human beings and animals than by any other form. To strengthen his position on the print he must be placed nearer one of the "thirds," and at the same time the tree which is competing for attention can be placed to the left in a weaker position. The foreground, the base of the picture, now calls for some strengthening, and if we can allow some more at the foot and curve it up on the right so that it does not fall out at the corner, it will give stability and help to hold in the interest. We must next consider the direction of the "verticals" as indicated by the dotted lines. The man, who appears to be falling outwards, should be posed to reverse his position and "oppose" the direction of the tree, and so give a suggested triangle construction. It is also suggested that the tree be given contact with the top and side edges to help support it and keep the dark tones nearer to the edge.

# Amateur Cinematography

NEWS, NOTES AND MATTERS OF INTEREST FOR ALL CINEMATOGRAPHERS USING AMATEUR CINÉ APPARATUS.

## How to Seat an Audience for Home Projection

By "ACTINOGRAPHIST."

**I**N my necessary wanderings about the country, I have met a goodly number of serious amateurs. They have adequate equipment and are turning out ever more purposeful and intelligent productions. They exhibit their apparatus and theatre arrangements with pardonable pride—and in the evening they round off the entertainment by running through a selection of their films.

Throughout, the procedure is almost invariably the same. At a favourable opportunity the enthusiast will slip away from his guests, rapidly set up the essential apparatus and then announce that the show is ready to commence.

From the point of view of the spectators, this is all very nice and comfortable. They sink deeper into their cosy armchairs and prepare to enjoy the show—until they discover that the position of their chairs is giving them only a dull view of the screen image. Or the situation may be even worse, some of the guests having to crane their necks to get a proper view of the pictures.

Of course, the chairs can be moved; but getting up to move a chair after the display has started can be far more diverting than one would imagine. In addition to which there is a subtle tendency to detract from the excellence of the films being screened—and this is perhaps the last thing that the enthusiast desires.

### The Screen.

It is important, then, to arrange the seats in really comfortable positions before commencing the display. All should face directly towards the screen, the lowest chairs in the front—so that the view of guests seated at the rear will not be obscured.

Not that this is an end of the matter. For different varieties of screen surface have differing qualities of reflective dispersion or light spread, and it is important from the aspect of brilliance to arrange each chair within the effective limits of the screen in use.

The familiar distemper or flat-white screen, for example, has a fairly wide spread. So have all the bead or "crystal" screens, and especially the recently introduced screens surfaced with "brilliant bead." Both therefore permit of spready seating or of the accommodation of the maximum number of guests that the room can be made to hold during a cinema display.

It is necessary at this stage to mention the factor of distortion (there is one very comfortable cinema in the Strand where this always prevails), for appreciable distortion is quite as undesirable as loss of screen brilliance. Now the flat-white screen is sufficiently reflective but is not remarkable for its refractive qualities, hence the pictures at wide angles and close quarters are prone to exhibit an unpleasant distortion. The crystal screens, on the other hand, are highly refractive—hence they are most suitable wherever it is desired to give a show under favourable conditions to any large number of guests.

Another popular type—known as the aluminium or "silver" screen—has rather different properties. Speaking of distortion only, this can be placed somewhere between the two others; but in the nature and quality of its light spread it is apt to differ vastly from both. In the first place, one has only to stand in the centre of a room

in which the silver screen is being used and walk slowly towards the side to observe how rapidly the brilliance begins to fall off. (Better still, use a clear gate and an electric photometer; I remember that at an early meeting of the Civil Service Ciné Society some remarkable figures were obtained in this way.)

As a result of this experience, then, it will be seen that maximum efficiency prevails when the guests are seated almost directly before the silver screen. This very considerably cuts down the number of spectators that can be accommodated at one sitting—and it certainly precludes viewing from the wider angles.

From the point of view of brilliance, however, the properly-used silver screen is very difficult to surpass, only the finest types of crystal surface showing any appreciable increase of light.

### Other Notes.

The points already dealt with will be

*This sort of subject is easily available at most times of the year. It is effective if worked from a middle-shot to a close-up.*

found very helpful in cases where a new room is being converted to cinema purposes and the buying of new equipment is in contemplation. Thus the room which is square or almost so may be well served with any efficient screen of the flat-white variety or of the somewhat more expensive "crystal." In this case, where the projector illuminant is hardly as powerful as it might be, the installation of a crystal screen of high quality is definitely indicated.

Any long room or hall will be better

served with the fitting of a "silver" curtain. It is important that this should have matt-black marginal bands of fair width, and it should be frequently dusted with a soft cloth—even though kept in one of the modern "roller" boxes.

It goes without saying, of course, that all loose wires or leads will be carefully run under carpets, etc., to eliminate the risk of chance mishap. This may annoyingly affect the guests, or it may embarrass the operator by causing a hitch in his show.

Where the party is small and the show informal, smoking may conveniently be allowed. It probably adds to the comfort of the guests.

But a big and important show may be a different matter, for under practical conditions an amateur friend of mine once read off a light loss equivalent to thirty per cent of the total screen dispersion, a light loss caused almost entirely by the presence of tobacco smoke emitted during a performance that lasted only an hour!

## It's Done This Way

Here is an abridged version of an interesting article by Eric Strutt, which appears in the October number of our American contemporary, "Movie Makers." It contains useful hints for the amateur.

WE seem to stand on a high bluff overlooking the ocean; it is a dark night and the waters below are shouldered about by the heavy winds that carry a storm across the frothy sea. In the distance, the lights of a great liner blink through the mists as the vessel dips and wallows in the trough of a wave.

Nevertheless, we need have no fear for the safety of the storm-battered passengers, for the scene is being shot in the studio; the ocean is a concrete pool about three feet deep, and the great liner is not more than three or four feet long.

Fig. 1.

The boat is made in perfect detail on the side facing the camera, but the other half of the vessel is left unfinished. The hull of the boat continues about a foot below the water-line, at which point it is mounted on a rocker that allows it to roll back and forth or from side to side. A lever controlling this rocker is operated by a workman who, standing hidden behind the boat, gives the model the proper rolling motion.

At the side of the pool and out of camera range, there is a platform from which, at a steep angle, there descends a chute, the bottom of which is turned up sharply. On the platform is placed a large water container with a lever so arranged that the water may be easily dumped down the chute. (See Fig. 1.)

Fans are placed in position at either side of the camera in order to give the water a choppy appearance, while black masking-cloth is hung a short distance behind the boat. When all is ready for the action, the manipulator behind the vessel begins the rocking motion, the fans whirl and the breeze chops the water into little white-capped waves. Some of the water is dumped down the chute from the container on the platform. It gains momentum with every foot and, as it strikes the bottom of the spillway, the upturned snout splits the downpouring torrent and blasts it across the pool as though typhoon driven.

Thus it is that a synthetic storm at sea is produced for the theatrical movies.

Our scene changes to the interior of a fast express that is dashing across the country. The hero is watching the panorama unfold beyond the car window, and we shoot across his shoulder to get a glimpse of the region through which he is passing.

The countryside is white with winter, and barren trees, rocks and brush dot the open, plain country. From time to time we pass a desolate little farmhouse, barn or straggling pasture fence, while in the background can be seen heavy grey and white storm-clouds. Everything—rocks, trees, brush, houses, barns and fences—is clothed in a cover of whiteness.

In reality, the camera is shooting through the window of a motionless train, while in the background there is an ordinary backdrop painted to represent clouds heavy with the portent of snow. All motion in the shot is derived from the background, and the foreground in model which move past the camera.

This is accomplished by means of an ordinary revolving canvas belt about three or four feet wide and about ten feet long. At either end of the belt is a drum which turns and gives action to the scene. The drum may be revolved by a motor, but it usually is operated by a hand-turned winch so that the speed may be regulated exactly. The miniature trees, rocks, brush and fences are glued securely to the revolving belt and the whole affair is plentifully covered with ordinary white paste and gypsum to simulate a northern winter. (See Fig. 2.)

At one end of the drum stands a man and, as the landscape revolves, he places a snow-covered house on the belt. At the other end stand two men, one to take the model from the belt and the other to return it to its beginning point. As the panorama belt is turning all the time, it is improbable that the first man will place the houses and barns in exactly the same location every time, so that three or four of these structures may serve to appear as a whole countryside.

Fig. 2.

# The Week's Meetings

*Societies will have their meetings announced here if the syllabus is sent to us at the beginning of the session or from time to time.*

## Wednesday, October 23rd.

Bethnal Green C.C. "Kings in Exile." (Zoo Studies.) G. E. W. Herbert.  
Birkenhead P.A. Lectures: "Mounting." J. Anglesey. "Finishing." W. H. Miner.  
Birmingham P.S. (C.S.). "Ciné Gadgets." R. J. Dutton.  
Brighton and Hove C.C. "Anecdotes, plus some puzzles." Geoffrey E. Peachey.  
Bristol P.S. "Romance of Bird Life." W. Jack.  
Coventry P.C. "Charles Kingsley's Land." F. W. Pilditch.  
Croydon C.C. "Wash in Running Water, one Hour." G. W. L. Carter.  
G.E. Mechanics' I.P.S. "Hypo to Exhibition Print." J. H. Clark.  
Handsworth P.S. "Portraiture." J. Suffield.  
Ilford P.S. "What we did with our 5s. Camera." (Balston and Wells.)  
Kodak Works P.S. "Kodachrome." F. B. Phillips.  
Northallerton and D.P. and C.S. Marcus Adams' Portfolio. Criticisms. D. MacLennan.  
Partick C.C. Visit to Mr. W. W. Weir's Studio.  
S. Suburban and C.P.S. "Miniature Cameras." Harold Burdekin.  
Worcestershire C.C. "Cameras of 1935." W. Hodson.

## Thursday, October 24th.

Accrington C.C. "Dark-room Dodges." Photographic Alliance.  
Armley and Wortley P.S. "The Lens and its Use." R. Nickols.  
Ashton-under-Lyne P.S. "Norway." Miss M. Wareing.  
Aston P.S. "A Holiday on the Waterways of Belgium and Holland." Bernard Moore.  
Bolton C.C. Members' Portraiture Night.  
Bury P.S. "The Chateaux of the Loire." Miss G. Mercer.  
Camberwell C.C. "A Dip into Devon." G. E. W. Herbert.  
Cardiff C.C. "Modifying Negatives." H. L. Hodge.  
Derby Railway I.P.S. Federation Folio and Slides.  
Greenock C.C. "Ciné Pictures." Jas. Wylie.  
Hammersmith H.H.P.S. "Some Famous Portrait Engravings." H. J. L. Wright.  
Huddersfield N.P. and A.S. "Land of the Moors." J. C. North.  
Hull P.S. "Still-Life—Practical Work." R. E. Booth.  
Keighley and D.P.A. "Wild Life by the Waterside." (Y.P.U.). A Gilpin.  
Loughborough P.S. Ciné Exhibition. W. Winters.  
Newcastle and D.A.C.A. Films: "Situations Vacant." "Revenge."  
N. Middlesex P.S. "Preparing Exhibition Prints." H. B. T. Stanton.  
Singer C.C. Development of Plates and Films and After-treatment.  
Sunderland P.A. "Panchromatic Photography." Burdis Redford.  
Wimbledon C.C. "Westminster Abbey." E. W. Harvey-Piper.

## Friday, October 25th.

Bethnal Green C.C. "Enlarging," Principles and Practice.  
Brighton and Hove C.C. Committee Meeting.  
Chelmsford P.S. "Press Photography." Maurice Wyrrill.  
Colne C.C. L. and C.P.U. Slides.  
Desborough and D.P.S. Criticism of Competition Prints.  
Edinburgh P.S. "Exposure and Development of the Negative." A. H. MacLucas.  
Harrogate P.S. "Come with me to the Zoo." F. A. Jordan.  
King's Heath and D.P.S. "Colour and the Camera." H. Wakeman.  
Leigh L.S.P.S. "Design in a Picture." J. White.  
Leytonstone and Wanstead C.C. "A Holiday in the Italian Lakes." Major C. Howard.  
Northamptonshire N.H.S.P.S. "The Essentials of a Good Negative." H. E. Cooper.  
P.S. of Ireland. "Developing." Mr. McCormick and Mr. Braine.

## Monday, October 28th.

Bexley Heath P.S. "Sights of London." A. E. Marden.  
Blackpool and Fylde P.S. "Theory and Practice of Development." F. Anyon.  
Bournville C.C. "Stray Thoughts on Composition." J. W. Chaplin.  
Bradford P.S. "The Charm of Nature Photography." B. Hanley.  
Brighton and Hove C.C. "Exposure and Development" (Beginners).  
Blackburn and D.C.C. "Design in a Picture." J. White.  
City of London and C.P.S. "Enlarging." R. Snell.  
Glasgow and W. of S.P.A. "A Loiterer in Belgium." Arthur Ling.  
Kingston C.C. "Hampton Court Palace." Ed. Yates.

## Monday, October 28th (contd.).

Lancaster P.S. Colour and Photography.  
Leeds C.C. Chloro-Bromide Enlarging and Finishing.  
Leeds University P.S. "Exposure and Development." J. Manby.  
Newcastle (Staffs) and D.C.C. Monthly Competition—Slides.  
Oldham E.P.S. "Events of 1934, with Ciné." L. Leavens.  
Sheffield and Hallamshire P.S. "Quality in Enlargements." E. Tinker and E. J. Lowe.  
Sheffield P.S. "Quality in Enlargements." (At 108 West Street).  
Southampton C.C. "Cities of Historic Italy." J. Dudley Johnston.  
S. London P.S. Demonstration of Dufraycolor Film. G. H. Sewell.  
Southport P.S. Members' Exhibition Night.  
Walsall P.S. "Pigments and Materials of 'The Old Masters'." E. M. Elliott.  
Walthamstow and D.P.S. Gevaluxe Velours. R. S. Beck.

## Tuesday, October 29th.

Barnsley P.S. "Bromoil." W. E. Gundill.  
Blackpool and Fylde P.S. "The Progress of Gothic Architecture." J. C. O. Dickson.  
Birmingham P.S. "Portraiture." T. Lee Syms.  
Bridge of Allan and D.P.S. "Miniature Photography." J. K. Chalmers.  
Doncaster C.C. "Wild Life of Shetland." W. W. Nicholas.  
Dunfermline P.A. Scottish P.F. Portfolio.  
Erdington and D.P.S. "Chat on Making the Exhibition Print." S. Bridgen.  
Exeter C.C. Hampshire House Society's Portfolio.  
Hackney P.S. "Easter at Staithes." Harold Rose.  
Halifax P.S. Members' Social Evening.  
Harrow C.C. "Technique of Slide-Making." A. E. Amor.  
Kilburn and Willesden P.S. "The Charm of Colour Photography." F. P. Bayne.  
Leeds P.S. "Screen Plate Colour Photography." J. H. Gough.  
Leicester and Leicestershire P.S. City of Leicester Publicity Committee Lantern Slide Competition.  
Manchester A.P.S. "Photographic Records in the Public Library." C. Nowell.  
Manchester P.S. "The Chloro-Bromide Process." T. C. Egan.  
Nelson C.C. "In Search of the Sparrow Hawk." R. Woods.  
Newcastle and Tyneside P.S. Mystery Night. Loan Collection. P. F. Bierman.  
Nottingham and Notts P.S. "With Rucksack and Camera in the Alps." A. Hackett.  
Norwich and D.P.S. "Photolithography." L. L. Walpole.  
Norwood C.C. "The Selection of the Subject." H. B. T. Stanton.  
Portsmouth C. and Ciné C. Lake District and N. Wales. (L.M.S. Railway Films).  
Rugby and D.P.S. The Science and Art of Photography (II). The Camera and its Accessories.  
St. Bride P.S. Chloro-Bromide Enlarging. (Ilford).  
Sheffield P.S. Y.P.U. "Shield" Slides.  
Small Heath P.S. Monthly Competition—Prints.  
Stafford P.S. Competition (Prints and Slides). Criticisms. B. Sinkinson.  
Warrington P.S. L. and C.P.U. Print Portfolio.  
Whitehall C.C. "A Camera in the Balkans." Bernard Newman.  
York P.S. Y.P.U. Pictorial Trophy Prints. Criticisms by Members.

## Wednesday, October 30th.

Bethnal Green C.C. Practical Work.  
Birkenhead P.A. "Lantern-Slide Making." F. W. Hollett and J. A. McAusland.  
Birmingham P.S. (Ciné) "The Value of Music and Electrical Recordings to the Sub-Standard Ciné Film." R. Bassett-Bullock.  
Brighton and Hove C.C. "Some Problems of the Printing Process." J. Ainger Hall.  
Coventry P.C. "Chat on Making an Exhibition Print." S. Bridgen.  
Croydon C.C. "Stereoscopy." D. S. Rose.  
G.E. Mechanics' I.P.S. Hints and Dodges.  
Handsworth P.S. "Preparing Prints." R. Sanders.  
Harrow C.C. Night Outing. Meet Charing Cross Tube Station, 8 p.m.  
Ilford P.S. "Photography by Sasalite." A. M. Harker.  
Kodak Works P.S. "Some Ciné Gadgets." A. S. Newman.  
Northallerton and D.P. and C.S. "Bromoil." E. T. Glaister.  
Partick C.C. Whist Drive.  
S. Suburban and C.P.S. "Flashlight Photography." H. Y. Moyse.  
Worcestershire C.C. "An Hour with a Naturalist." Herbert Thompson.

# Exhibitions and Competitions

## CURRENT AND FUTURE.

*Notices of forthcoming exhibitions and competitions will be included here every week if particulars are sent by the responsible organisers.*

*The Amateur Photographer* Monthly Competitions for Beginners, Intermediate and Advanced Workers. Entries, October 31. Rules in issue of September 25.  
Irish Salon (to be held at Mansion House, Dublin).  
—Open, November 2-9. Particulars from Hon. Secretary Irish Salon of Photography, 18, Morehampton Road, Dublin.  
G.W. Rly. "Camp Coach" Holiday Competition.  
—Prize, one week's holiday in camp coach during 1936 holiday season. Photographs should depict any aspect of camp coach holiday. Entries due, October 31. Further particulars from Superintendent of the Line, G.W.R., Paddington Station, W.2.  
Seventh Western International Photographic Salon.  
—November 23-30. Entries close, Monday, October 28. Particulars and entry forms from the Organising Secretary, W. H. Hill-Muchamore, 24, Church Road, Redfield, Bristol, 5.  
Cape of Good Hope International Salon (under the auspices of Cape Town P.S.).—Entries due, November 19; open, January, 1936. Hon. Salon Secretary, Richard Dekenah, P.O. Box 2431 Cape Town, South Africa.  
IXe International Kertsalon Fotografische Kring

"Iris."—Open, December 22—January 5, 1936. Entries close, November 15. Particulars and entry forms from J. Van Dyck, Secretary, "Iris," 69, Ballaerstraat, Antwerp.  
Third (Second International) Wilmington Salon of Photography.—Open, January 6-26, 1936. Last day for entries, December 15, 1935. Particulars and entry forms from the Salon Committee, Delaware Camera Club, P.O. Box 818, Wilmington, Delaware, U.S.A.  
Leicester P.S. International Exhibition.—Entries, January 24, 1936; open, February 24—March 7, 1936. Exhibition Secretary, H. Foscutt, 19, Doncaster Road, Leicester.  
The 40th Annual Exhibition of the South London P.S.—Open, February 15—March 14, 1936. Entries close, January 21. Further details and entry forms from Hon. Exhibition Secretary, H. S. Adams, 40, Stockwell Park Road, London, S.W.9.  
Scottish National Salon.—February 8-29, 1936. Entries close, January 11. Particulars and entry forms from the Hon. Salon Secretary, Norman G. Brown, 36, North Lindsay Street, Dundee.  
Ilford Photographic Society.—Annual Photographic

Exhibition. From Monday, March 2 to Saturday, March 7, 1936. Closing for entries, Saturday, February 1, 1936. Particulars and entry forms from E. G. Roughton, 63, Havering Road, Romford, Essex.  
City of London and Cripple Gate Photographic Society.—Thirty-first Annual Photographic Exhibition from March 16-21, 1936. Entries close, February 10, 1936. Particulars and entry forms from the Hon. Exhibition Secretary, A. C. Mundy, 11, Monkham Lane, Woodford Green, Essex.  
Ville Salon International D'Art Photographique de Bruxelles, 1936.—Open, from March 21—April 5, 1936. Entries close, February 25. Particulars and entry forms from M. M. Devaivre, 152, Rue Markelbach, at Brussels 3, Belgium.  
Darwen Exhibition of Photography.—April 20—May 2, 1936. Entries close, March 19. Particulars and entry forms from the Secretary, J. H. Woods South Down, Bolton Road, Darwen.  
Bristol Photographic Society.—Second Annual Open Exhibition from May 2-19, 1936. Entries close, March 28. Particulars and entry forms from the Hon. Exhibition Secretary, Percy V. Cave, 36, Coldharbour Road, Redland, Bristol, 6.

# Readers' Questions ANSWERED

GENERAL.—All communications for the Editor should be addressed to: "The Editor, *The Amateur Photographer and Cinematographer*, Dorset House, Stamford Street, London, S.E.1," and in every case, without exception, must give the name and address of the writer.

CONTRIBUTIONS.—The Editor is glad to consider original, up-to-date manuscripts on photographic subjects. All contributions must be typewritten, or in very legible handwriting on one side of the paper only. Letters or communications arising out of matters already appearing in the paper are not paid for. The Editor disclaims legal responsibility for the safety of matter submitted to him, but he will endeavour to return rejected manuscripts etc., when a stamped addressed envelope is enclosed. MSS. or prints that are not actually accompanied by a stamped wrapper or envelope can in no case be returned. Reproduction fees for prints are only paid by arrangement beforehand. The sending of a print, without any condition stated, will be taken as permission to reproduce it without fee.

ENQUIRIES AND CRITICISM.—Advice, Criticism and Information are freely given, but the following conditions should be read carefully before applying, as any communication which does not comply with the rules must be ignored.

(1) See "General" above. (2) Every question and every print for criticism must be sent separately through the post, and must be accompanied by a separate stamped addressed envelope. No exception can be made in any case to this rule, except so far as enquiries or prints from Overseas are concerned. (3) Neither enquiries nor prints for criticism must be enclosed with competition prints. (4) On the back of each print sent for criticism, in addition to the name and address of the sender, must be the title (if any), and the criticism coupon from the current issue. (5) Enquiries should be clearly written, on one side of the paper only, and should be specific and not general. Such enquiries as "How can I take interiors?" or "Can you give me some hints on outdoor portraiture?" are too general to be dealt with in this section. (6) All envelopes should be distinctly marked "Query" or "Criticism," as the case may be. (7) Prints are sent for advice or criticism on the distinct understanding that by so doing permission is given for their reproduction without fee. We endeavour to deal promptly with enquiries, but cannot undertake to answer by return of post, nor can we give precedence to any enquiry.

A selection of those replies is printed each week, but all questions are answered by post. Enquiries from abroad must contain a coupon also, but it need not be from the current number, and should be cut from the latest issue to reach the enquirer.

## Scratches on Films.

On the backs of the enclosed film negatives you will notice that there are peculiar scratch marks that show, unfortunately, in my enlargements. Is it possible to remove them, as they are nothing to do with the real negative emulsion?

C. B. (Brighton.)

The scratch marks are certainly prominent enough to show in a print, but we cannot suggest any method of removing them without affecting the print image. You must remember that on most roll films there is another coating laid on the back of the film in order to counteract the curl of the light-sensitive emulsion on the front, and, as far as scratches, etc., are concerned, this coating on the back is just as easy to damage. We can only suggest that a condenserless enlarger is used which will soften out the effect of the scratches.

## Pyro-Metol.

Is it possible to combine pyro and metol for negative development? A. B. (Bristol.)

Certainly. An "Imperial" formula is:

A. Metol	45 grs.
Potassium metabisulphite	120 grs.
Pyro	55 grs.
Potassium bromide	20 grs.
Water to	20 oz.
B. Sodium carbonate	4 oz.
Water to	20 oz.

Prepare as follows: Dissolve metol in 12 oz. of water, and metabisulphite in 4 oz.; mix, add pyro, then bromide, and make up to 20 oz. For use, take equal volumes of A and B.

## Local Reduction.

How can I reduce the high-lights on bromide prints with ferricyanide? Is subsequent fixing necessary? S. T. W. (Oxford.)

Before doing local reduction on the print it should be soaked in water and then surface-dried. The reducer to which you refer is an ordinary plain hypo

solution, in which enough potassium ferricyanide has been dissolved to make it a lemon yellow colour. It must be prepared immediately before use, and applied with a brush mounted in a quill and not a metal mount. No fixing is necessary, but the reducer must be quickly washed off as soon as the action has gone far enough, or rather, just before. We should advise you to practise on waste prints first.

## Clearing Negatives.

Can I use the hypo-ferricyanide reducer for clearing veiled-over negatives? If so, can it be made up ready for use and kept for further work? S. F. (Southgate.)

The solution will do the work, but it will not keep. You can make up two stock solutions. The first is 1 oz. potassium ferricyanide in 16 oz. of water, to be kept in an opaque bottle, and marked "Poison"; the second is 1½ oz. of plain hypo in 16 oz. of water. When you are ready to treat the negative, take enough of the hypo solution to cover it well, and add about 1 dr. of the ferricyanide per ounce of hypo. Keep the dish rocking, and rinse the negative quickly and thoroughly a moment or two before the action has gone far enough. Throw the used solution away.

## Blue Films.

After washing my films I always soak them in a very weak citric acid solution but this causes the blue colour to return which can only be removed by immersing back again into the acid hypo bath. What is the cause of this?

C. C. (Bristol.)

It is the use of the acid which brings back the colour of the blue dye in the film. You can remove it again by immersing the negative in water to which a few drops of ammonia have been added, but, as the stain is an even one, it will not be detrimental in printing or enlarging.

## Short Development.

I have seen in your journal various references made to under or short development of negatives for certain types of subjects. If one such negative is only one of a spool or pack and tank development is used, how can one give individual treatment to that particular negative?

G. K. (Glasgow.)

When it comes to development of negatives in the spool or in a tank you cannot differentiate the time. All you can do is to attend carefully to the exposures for the different subjects and try to strike a happy medium for development. The inevitable difference in the character and contrast of the negatives can be allowed for in the choice of a printing medium.

## Photo-montage.

What is meant by photo-montage and composite photography? Is there any difference between them? E. M. R. (Walthamstow.)

Strictly speaking, there is no difference, since photo-montage is a word that has been coined to describe the mounting of two or more photographs in a composite fashion on a single print. But in practice, a composite photograph is generally a print containing two or more different prints which are superimposed over each other completely blocking out anything underneath it, whereas photo-montage is now generally applied to prints where the different items are partially transparent where they overlap and merge into each other.

## Dense Negatives.

I have some negatives that are over-exposed and very dense. Can I, by making positives by contact, use these to obtain thinner negatives more suitable for enlarging?

A. P. (Bromley.)

It does not follow that an over-exposed negative must be dense, as excessive density is due to over-development. You can certainly make a positive by exposing an ordinary or medium plate behind the negative in practically the same way as when making a bromide or gaslight print. A very suitable plate for both the positive and the negative is the fine-grain ordinary type.

## Copying.

I am rather keen on doing some copying work, and have a lens fitted with four different stops. What sort of camera do I need for this work? G. P. (Staffs.)

We regret that we cannot give you any definite information. You do not say what sort of things you want to copy. If you want to photograph anything the same size as the original you must be able to rack the lens out from the plate to twice its focal length. It is almost immaterial what size of negative you make. Whether your lens will be suitable for copying or not we cannot say, as the name of the maker and the number of stops it has do not give us any real information.

## Photographic Chemistry.

Can you recommend an elementary book dealing with chemistry from a photographic point of view? M. C. (London.)

You probably cannot do better than get a copy of "Elementary Photographic Chemistry," published at a shilling by Messrs. Kodak.

# The Amateur's Emporium

## Prepaid Advertisements

SALE AND EXCHANGE: AMATEURS ONLY—

12 words or less ..... 1/-  
1d. for every additional word.

PROFESSIONAL AND TRADE—

12 words or less ..... 2/6  
2d. for every additional word.

Each paragraph is charged separately.

SERIES DISCOUNTS are allowed to Trade Advertisers as follows on orders for consecutive insertions, provided a contract is placed in advance, and in the absence of fresh instructions the entire "copy" is repeated from the previous issue: 13 consecutive insertions, 5%; 26 consecutive, 10%; 52 consecutive, 15%.

All advertisements inserted in these columns must be strictly prepaid, and reach the offices, Dorset House, Stamford Street, S.E.1, not later than first post Friday for the following week's issue. Advertisements are inserted, as far as possible, in the order received, and those received too late for one issue, or crowded out, are published in the first following in which there is space. The Proprietors retain the right to refuse or withdraw advertisements at their discretion.

## Box No. Advertisers

If a Box No. is required the words "Box 000, c/o 'The Amateur Photographer'" should be included in the charge, and an additional 6d. sent for registration and cost of forwarding any replies.

Letters addressed to box numbers are simply forwarded by us to the advertisers. We do not deal with the correspondence in any other way, nor accept any responsibility in connection with the advertisements.

## Deposit System

Readers may deal in safety through our Deposit System. Purchase money should be deposited with "The Amateur Photographer and Cinematographer." The time allowed for decision is three days, counting from receipt of goods, after which period, if buyer decides not to retain goods, they must be returned to sender. If a sale is effected, buyer instructs us to remit amount to seller, but if not, seller instructs us to return amount to depositor. Carriage is paid by the buyer, but in event of no sale, and subject to there being no different arrangement between buyer and seller, each pays carriage one way. The seller takes the risk of loss or damage in transit. For transactions up to £10 a deposit fee of 1/- is charged; over £10 and under £50, 2/6; over £50 and under £75, 5/-; over £75 and under £100, 7/6; over £100 one-half per cent. All correspondence must be sent to Dorset House, Stamford Street, London, S.E.1.

"The Amateur Photographer" can be obtained abroad from the following: UNITED STATES: The International News Co., New York. FRANCE: W. H. Smith and Son, 248, Rue Rivoli, Paris; Hachette et Cie, Rue Reaumur, Paris. BELGIUM: W. H. Smith & Son, 71-75, Boulevard Adolphe Max, Brussels. AUSTRALIA: Gordon & Gotch, Ltd., Melbourne (Victoria), Sydney (N.S.W.), Brisbane (Queensland), Adelaide (S.A.), Perth (W.A.), and Launceston (Tasmania). CANADA: Imperial News Co., Toronto, Winnipeg and Vancouver; Benjamin News Co., Montreal; Gordon & Gotch, Ltd., Toronto. SOUTH AFRICA: Central News Agency, Ltd.

Cheques and Postal Orders sent in payment for

deposits or advertisements should be

made payable to ILIFFE AND

SONS LTD., and crossed

& Co.

Notes being untraceable if lost in transit should not be sent as remittances.

## WARNING

We have received many complaints from our readers in regard to the business methods of Mr. R. L. Green, trading as R. L. Green's Photographic Exchange, of 218, Fore Street, Edmonton, London, N.18, or (possibly with different initials) as Cine Photo Supplies, 4, Holborn Place, High Holborn, W.C.1.

For some considerable time we have refused to insert his advertisements in "The Amateur Photographer and Cinematographer," and from the complaints we have received it would appear that his practice is to communicate with private advertisers having goods for sale, offering to take such goods in exchange for others, or to purchase for cash. Readers are advised to ignore all such offers from this quarter.

## CAMERAS AND LENSES

## THE 'ANGULAR' TRIPOD

The construction of this tripod makes it stronger than any telescopic tripod made of round brass tubes, the legs being triangular. It is less than 1 in. in diameter—easy and comfortable to carry. The ball-and-socket top can be instantly and securely clamped with the camera pointing in any direction. Made of white metal. Four sections. Length, closed 17½ in., extended 50 in. Weight 23 oz.

Price 12/6

Without Ball and Socket Top, 10/6. Light Leather Carrying-case, 7/6.

## NEW! LEICA MANUAL

This fine new book contains 500 pages and 300 illustrations. It is written by 20 of the world's authorities on the Leica. Supplies are very limited. Price 21/- (postage 6d.)

**GET YOUR COPY NOW!**

## NEW FILMO "STRAIGHT 8"

*The smallest ciné camera in the world.*

Daylight loading. Takes 30-ft. spools of film. Has built-in exposure chart. Four speeds. Fitted with T.T.H. f/2.5 lens. **£19:15:0**

Nine monthly payments of 46/1.

## ENSIGN MIDGET MAGNA- PRINT

With front adapted to take interchangeable Leica lenses, and special carrier for 35-mm. film. Enlarges up to 15x10 in. Without lens

**£4:10:0**

Nine monthly payments of 10/7.

## ZODEL LENS HOOD

It is not only in the summer that the Zodel lens hood is indispensable. In autumn photography, with the sun at a lower altitude and giving many beautiful shadow patterns and against-the-light effects, a lens hood is even more necessary. Zodel lens hood is telescopic and folds flat for carrying. State size of lens when ordering.

**Only 7/6**

As advertisements on these covers go to press a fortnight in advance some of these second-hand items may be sold already, but similar outfits are usually available.

PLEASE MENTION "THE AMATEUR PHOTOGRAPHER" WHEN CORRESPONDING WITH ADVERTISERS

# SERVICE

THAT MAKES BUYING AT BOND STREET

# A PLEASURE

## LEICA FACILITIES

Wallace Heaton offers facilities which cannot possibly be obtained elsewhere. Registered Leica customers are supplied free on request with Leica spool transit envelopes to ensure safe despatch of D. & P. orders. Free copies of "Leica News and Technique" are sent to you periodically, and "News" binders for preserving your copies are supplied at 1/- each. Leica exposure record cards are also available. Full technical information is willingly given on all matters photographic. Every Leica camera, lens and accessory is always in stock at Bond Street.

## FILM LIBRARIES

Whatever films you want—9.5-mm., 16-mm., silent or 16-mm. sound-on-film—you'll find them in our comprehensive library. Hundreds of new titles have just been added which are exclusive to Wallace Heaton customers. Take advantage of this home ciné aid. Time taken by films in the post is deducted from charges. Customers are periodically notified of all new releases.

## CINÉ APPARATUS

There is no ciné camera, projector, screen, titling outfit or any accessory that we cannot supply immediately from stock. Every maker is represented in our huge range. Here are a few models in stock:

Bolex G (9.5 and 16 mm.) Projector, £46. Zeiss Ikon Movikon (16-mm.) Camera, £98 10 0. Ensign 300-B Projector, £29 10 0. Paillard Camera, £49.

## MINIATURE CAMERAS

We specialise in miniature cameras, and are always willing to give expert advice on your choice of lenses and accessories for any model. Some models in stock are:

New Super Ikonta, £28 5 0. Foth-Derby Camera, £5 5 0. Zeiss Ikon Contax, £31. Exakta Focal-plane, £19 10 0.

EIGHT

MODEL  
60

Handle the sleek black leather and gleaming chromium plate; listen to the scarcely audible "whirr" of a vibrationless motor; examine the smooth-running precision of perfect mechanism. Such a "personality" has this new Ciné-"Kodak" that it thrills you before ever a foot of film has been exposed; and when you start "shooting" it brings that perfect confidence which is the result of using the best.

The standard lens is an  $f1.9$  Anastigmat which focusses from 2 ft. to infinity. This is immediately interchangeable with a  $1\frac{1}{2}$  in.  $f4.5$  telephoto lens (extra) which carries its own view-finder frame. A Ciné-"Kodak" Colour Filter which fits both lenses is also available.

The camera holds 25 ft. of Ciné-"Kodak" Eight Film (equivalent to 100 ft. of 16 mm. film) and is sold with felt-lined leather case, as illustrated. Price £25.0.0.

Telephoto lens,  $1\frac{1}{2}$  in.  $f4.5$  ... £8.8.0.

Ciné-"Kodak" Colour Filter No. U8 ... 10/6

## MINIATURE CAMERA BARGAINS AT LOWER PRICES SPECIALIZATION.

### MINIATURE APPARATUS.

We are the only firm in Great Britain specializing exclusively in miniature apparatus such as the Leica and Contax. Every miniature camera of distinction together with a full range of accessories is to be seen at our showrooms. Where miniature cameras are concerned, we give the highest part-exchange allowances and pay the best cash prices in the trade. Any type of modern high-class apparatus taken in part exchange.

### PROCESSING.

A new approach to the problem of processing is essential if flawless negatives and perfect enlargements are to be produced from miniature negatives. Appreciating this, we have equipped ourselves exclusively to deal with the miniature negative. We pride ourselves that the results fully justify our policy.

### A SELECTION FROM OUR SECOND-HAND LIST

# A £2,500 Rolleiflex PICTURE

... THIS IS WHAT Mr. JENKINS, WHO WON THE "DAILY HERALD" £2,500 PRIZE, HAS TO SAY ABOUT THE ROLLEIFLEX

"I naturally think the Rolleiflex is a wonderful camera. Its chief advantage to my mind is that you can see your picture right way up all the time and in actual size. I've found this a great help in getting good composition. The quick focussing and clever placing of the controls are a wonderful asset in getting quick, unusual shots."

(Signed) R. Jenkins.

Mr. Jenkins using his Rolleiflex.

Reproduced by courtesy of the "Daily Herald."

Rolleiflex takes 12 exposures on  $3\frac{1}{2} \times 2\frac{1}{4}$  8-exp. roll film for 1/-. The square format proves an advantage for enlarging or trimming your print to any desired shape. Rolleiflex is the fastest roll - film mirror reflex in the world. It is fitted with one lever Compur shutter speeded to 1/500th sec., T. & B., and the lens is Zeiss Tessar f/3.5. It is designed to take plate back and numerous accessories which make it extremely versatile. Price £22 10 0.

It is not generally known that 80 per cent of the films made in Hollywood and the British Film Studios are photographed with Cooke Lenses—made by Taylor-Hobson at Leicester. This work affords perhaps the most exacting test to which a lens can be put. Further, the majority of the large Cinemas project their pictures through Taylor-Hobson Projection Lenses.

## COOKE LENSES

In a recent issue of a leading Sunday newspaper, Sir Cedric Hardwicke's views were quoted on the possibilities of colour in films as most recently exemplified in "Becky Sharp," produced by Technicolor process. Sir Cedric said: "... I never believed that colour in the Cinema could be so exciting and lovely ... colour will heighten everything. ... I shall be surprised if in three years' time the monochrome picture isn't an exception."

It is interesting to note that the lenses used in the new Technicolor process are Cooke lenses, made by Taylor-Hobson at Leicester and that this colour photography has been made possible by the research of Taylor-Hobson technicians.

### The Amateur Photographer and Cinematographer

# Annual Lantern-Slide Competition, 1935

CLOSING DATE: THURSDAY, OCTOBER 31st, 1935.

#### Classes and Subjects.

- CLASS I.—Landscape, with or without figures, sea subjects and river scenery.  
CLASS II.—Portraiture and figure studies, whether indoor or outdoor pictures.  
CLASS III.—Architecture, interior and exterior.  
CLASS IV.—Flowers, fruit and other "Still-Life" subjects.

- CLASS V.—Natural History subjects.  
CLASS VI.—Lantern slides in colour (not hand-coloured).  
CLASS VII.—Champion Class. Open only to those who have won silver or bronze plaques in *The Amateur Photographer and Cinematographer* Lantern-Slide Competition.

#### Conditions and Awards.

(1) All classes are open to amateur and professional photographers without any restrictions. All slides must measure  $3\frac{1}{2} \times 3\frac{1}{2}$  in., and must be properly spotted for showing in the lantern.

(2) One silver plaque, one bronze plaque, and four certificates are offered in each class except Class VII. In that, the Champion Class, the award will be a mounted and signed exhibition picture by Mr. F. J. Mortimer, the Editor of *The Amateur Photographer and Cinematographer* and *Photograms of the Year*.

(3) All slides which receive any award will become the property of *The Amateur Photographer and Cinematographer*, and will be sent round amongst the societies and such other associations as apply for the loan of them. Any other slides may be selected for circulation in this manner, and will be paid for at the rate of half a crown each.

(4) Competitors may send any number of slides in any class, and may be recorded as winning any number of awards; but no competitor will actually receive in the competition more than one silver plaque, one bronze plaque, and one certificate, on which all his awards will be recorded. Competitors may enter in any number of classes.

(5) Each slide must bear the competitor's name, its title and its class. With the slides must be sent an envelope containing the name and full address of the com-

petitor, a list of the titles of all the slides he is sending in, and the class in which such are entered. Particulars as to make of plate, exposure, developer used, etc., and other technical data which may be of interest for incorporation in the notes which will accompany the winning slides on their tour among the photographic societies, should also be given where thought necessary.

(6) A stamped and addressed label (not loose stamps) should be sent with the slides for their return if unsuccessful; but in no circumstances can the Editor or the Publishers accept any responsibility for slides sent in for competition, nor for their return; neither can slides be returned which are not accompanied by stamps as above.

(7) Not more than one slide from any one negative can be admitted, nor may any slide compete which has before won an award in these competitions.

(8) The last day for receiving is Thursday, October 31st. The slides must be well packed, and addressed "Slide Competition, The Editor, *The Amateur Photographer and Cinematographer*, Dorset House, Stamford Street, London, S.E.1," and all carriage charges must be prepaid.

(9) In any case of dispute, the competitor agrees to accept the decision of the Editor of *The Amateur Photographer and Cinematographer* as final.

**NEW!****PAILLARD BOLEX** model **G 3****PROJECTS THREE FILM SIZES!****8-mm. 9.5-mm. 16-mm.****An Amazing Achievement in Cine Engineering**

Once again Paillard-Bolex engineers have scored a big success with this new model, which, for the first time in the history of sub-standard films, places on the market a projector that will show *three film sizes!*

Cine users will appreciate the wider scope this new model G.3 projector gives, enabling them to choose from films in 8-mm., 9.5-mm. and 16-mm. libraries and thereby giving them access to the many interesting films that are certain to be available only in 8-mm. libraries.

The change over from one film size to another only takes a few seconds and no tools are required.

When it is realised that for the projection of 8-mm. films the cam has to travel twice as fast as for 16-mm. or 9.5-mm., it will be seen that the ingenuity of Paillard's engineers has succeeded in overcoming tremendous difficulties.

The mechanism and high standard of illumination are the same as the well-known model G.916. Send at once for details of this newest Paillard-Bolex.

<b>PRICE</b>	Model G.3 Projector, with all accessories, fitted 2 in. lens and 500-watt lamp ..	<b>£60</b>

Vol. LXXX. No. 2451.

THE next few months will see the greatest amount of activity among those amateur photographers who are interested in lantern and ciné work. Modern methods and processes have rendered photography of all sorts, both indoors and out, equally simple in winter as in summer, but the long evenings of the winter months offer special inducement to all who favour the projection of their pictures either by lantern slides or ciné film. Interest in this work is steadily growing, and more amateurs in all parts of the country are making slides or using projectors for their own or borrowed films. In this issue of *The Amateur Photographer and Cinematographer* many matters of special interest to readers, both beginners and advanced, who are following these phases of photography, will be found, and the bulk of the articles, etc., deal with lantern and ciné subjects. As so much space has been devoted to them several regular features have been omitted, but will reappear in our next issue.

### Rus in Urbe.

It is by no means unusual for a photographer in London to discover truly rural scenes in or near the centre of the Metropolis, subjects of a type which would be found in an isolated country village. This branch of work, however, appears to be a new one to our friends in France. News items from Paris a few days ago told of a sensation caused in that city by a photographer who produced a series of rural views taken in the French capital; there were cottages, church spires, etc., which might have been in a small Normandy village, and a picture of a woman milking a cow

## TOPICS of the Week

A NEW ELECTRIC LAMP FOR PROJECTION AND OTHER PHOTOGRAPHIC PURPOSES.

A MERCURY vapour lamp considerably smaller than even the smallest ordinary domestic lamp-bulb has just been perfected in the Philips Research Laboratories. The lamp has a practical light intensity of about one-quarter that of the sun as seen from the earth, nearly twice that of the cumbersome carbon arc, and two hundred times that of the ordinary electric lamp. One of these new concentrated "sunlights" is no larger than the stump of a pencil—an inch long and a quarter of an inch thick, with a wattage of 1,000. The above photograph shows one of the new lamps of 1,000 watts compared with a specimen of the present-day 1,000-watt lamp, which is inferior six times in light intensity.

within a mile of the Paris Stock Exchange. Londoners are reminded by an artist correspondent that there are still some old country-like cottages within a few yards of Knightsbridge Green, humble homes which might be in Shakespeare's country; gardens in Mayfair which might be in the heart of Surrey, and, most notable of all, a lane near Brompton Oratory which is said to be unrivalled in any great city. At Camberwell and Dulwich, within sight of St. Paul's, there are also some country-like bits.

### Tricks of Hollywood.

Some of the tricks of Hollywood are exposed in an American publication. To create a "horror picture" of prehistoric monsters invading a modern city some Texas armadillos were taken, photographed at twenty times their natural size, waddling past the toy buildings of a miniature city. In "The Invisible Man," a tiny motor car, loaded with petrol-soaked cotton and a fuse, was run over a toy cliff and burst into flames, and in the same picture a toy railway train, with cars two feet long, tumbled down a mountain side. Both accidents are said to have been strangely convincing. Octopus tentacles and snakes in Hollywood may be merely jointed tubing strung on piano wire, coated with sponge rubber and painted. The bottles which are broken over people's heads in bar-room brawls are not of glass but candy, and would not hurt anybody. The same candy is used in the form of pills for "shooting" winter scenes. The actor holds the pill in his mouth, and as it melts it gives off a vapour that is visible, like breath on a cold day. Plaster for icicles, oatmeal for snow, and gales made by wind

machines are all used to simulate winter. To make it rain over a three-acre field in "Little Women" the engineers built a high scaffolding, carrying a mile of perforated pipe. But some things in Hollywood are what they seem. They have real pygmies and real giants there. We are told that there are over 17,000 people listed on cards for "bit" or "atmosphere" work. Obviously the same crowd cannot be used for an embassy reception as for a clandestine meeting of the "Black Hand." One emergency call sent out from Hollywood was for a "tough mechanic with a broken nose and two teeth missing." People with one eye are in demand; also trained acrobats who can take rough falls and not get hurt. Another call was for a "distinguished looking man with a continental-like spade beard, who can work as a count or diplomat." Artificial eyelashes costing a dollar a pair are used by thousands. "Ageing" is an interesting art. It is easier to make a twenty-year-old girl look like an

old woman of eighty than to do the reverse, though that also can be done. In ageing the work begins on the neck with shadows painted in and cords intensified. Lines are drawn on the corners of the eyes and mouth. Fat or the lack of it is shown by the use of red paint, and shadows under the eyes are made of bluish pigment. In fact, there is no illusion impossible to Hollywood. Perhaps the whole thing is an illusion.

### More Amateur Portraiture Wanted.

Mr. Robert Chalmers, in his presidential address to the "Royal" from which we quoted last week, recommended amateur photographers to take up portraiture more than they have done. At first sight this advice might not sound necessary, because the first thing the user of a camera usually practises on is his uncomplaining relatives. But Mr. Chalmers notices a lack of portraits by amateurs at recent exhibitions, and portraiture

has a special value for the amateur, because in it the selection of one's own composition is more free than it can be in, say, landscape or architecture, and one can have what background and what lighting one pleases. "I do wish," says Mr. Chalmers, "photographers throughout the country would endeavour to secure some of those fine old heads which one comes upon now and then." He himself told a story of how he had photographed an old man and had failed to please the sitter. The sitter wrote that he had made him look old—but he was in fact well over eighty—and ugly and bad-tempered. Perhaps the sitter is not the best judge of his portrait, and in this case after the old man's death members of his family came and asked for copies. There is a great deal to be said for experimenting in portraiture. After all, faces are more interesting, usually, than buildings or mountains or seas, not to mention birds and beasts. And the beauty of it is they are none of them alike.

## READERS' PROBLEMS

Selected queries on topics of general interest to readers will be fully dealt with on this page week by week. Other replies appear as usual on the last page.

### Physical Development of Slides.

*I understand that "physical" development, as sometimes used for negatives, is suitable for lantern slides also, and that it gives similar results to thiocarbamide. If this is so, can you give me a formula?*

S. L. (London.)

A mere formula would not be of much use, but we gladly give you some information about the method, which, although it gives characteristic results, has not received as much attention as it perhaps deserves.

There is little variation in the results, so that we do not understand the comparison with thiocarbamide development, as this gives considerable variety of tones. The colour obtained with physical development is a blue-black, which is quite distinctive; and in a successful result the transparency of the shadows is a noticeable and valuable feature. It is said that such slides toned by the sulphide process are unrivalled, but we are not in a position to confirm this.

There is no doubt, however, that the process is capable of giving harmonious results from negatives that would be too hard and contrasty for most other methods.

Success depends, more than anything else, on the most scrupulous cleanliness as regards dishes and graduates. Lantern plates must also be fresh. As a basis of exposure it may be assumed that this should be about double that required for the plate if it were to be developed, say, with M.Q.

A stock solution of silver nitrate must be prepared—1 oz. of nitrate in distilled water to make 10 oz.

The other solution is:

Metol	..	..	..	..	..	90	grs.
Citric acid	..	..	..	..	..	90	grs.
Glacial acetic acid	..	..	..	..	..	1	oz.
Distilled water to	..	..	..	..	..	20	oz.

To 1 oz. of this add 50 minims of the silver nitrate solution and pour this over the exposed plate. Rock gently and continuously. Silver is generally deposited over the whole surface of the plate, but is removed by rubbing with a plug of cotton-wool and water.

Dishes, measures and fingers can be cleaned with an acid permanganate solution, or a strong solution of Howard Farmer reducer (hypo-ferricyanide).

### Fixing Bath.

*Can I increase the speed of fixing by using a very strong hypo solution for negatives? If so, what is the strongest I can use? How can I get different strengths of hypo baths from the same stock solution?*

F. E. S. (Carmarthen.)

It is considered that the hypo solution that accomplishes its work most quickly is one of about 40 per cent. There are dangers in using so strong a solution. The swollen gelatine may blister, frill, or even leave its support altogether on transferring it to the washing water. A 25 per cent solution is therefore the strongest advisable—say, hypo 4 oz., water 16 oz. This answers your first two questions.

As regards the third question, we have frequently described an easy method of doing what you require. You should dissolve 1 lb. of hypo in about a pint of hot water, and then add enough water to make up the total volume to 32 oz. It is evident that 2 oz. of this solution (when shaken up) will contain 1 oz. of hypo.

Suppose you require a solution of 5 oz. hypo in a total volume of 20 oz. To get the 5 oz. of hypo you take 10 oz. of the stock solution; then you add 10 oz. of water. For 4 oz. in 20, you would take 8 oz. of stock, and add 12 oz. of water. And so on.

# Operating the Lantern

While most photographic and other societies usually possess a lanternist of their own, there may arise an occasion when one of the ordinary members may be called upon to operate the instrument, and a general outline of the procedure is set out below for the benefit of the beginner in this work.

**T**HE lantern season is now in full swing; lectures to photographic societies, missionary societies, scientific societies and clubs are the order of the day—or rather, evening. Lecturers of different temperaments and with differing sets of slides appear and proceed to deliver their talks, always expecting that the man manipulating the lantern is proficient.

Preparation for the lecture is one of the most important problems to be dealt with, and this should invariably be completed before the time the lecture is due to start, as nothing is so disconcerting to audience and lecturer alike as to have the operator busying himself with his arrangements.

## **The Screen.**

After the lantern itself, which should be fixed on a firm base to prevent vibration, special attention should be given to the screen. This should be definitely opaque. Experiments with various kinds of translucent and beaded screens, aluminium paint, and so on, have been carried out, but experience points to the dead-white opaque surface as being ideal. A white-washed board makes a good one, but one large enough for a big hall may be difficult to obtain, so that recourse is usually had to a taut linen sheet.

## **Size of Picture.**

The screen having been decided on there arises the question of the size of picture desired. The capabilities of the lantern will have the main bearing on this question, lighting, lens focus, etc. Fortunately, there is a formula upon which the operator can work to ascertain the size of picture and the distance from the screen.

If it is decided to aim at a definite size of picture, and there is a variety of lenses to choose from, it simply amounts to deciding which lens to use, and the following formula

can be applied: Take 3 in. as the normal opening of the slide, multiply this by the room length, or the distance at which the lantern can be placed from the screen, and divide by the diameter of the picture desired.

As an example, take a room thirty feet long, and size of picture required twelve feet, the focus of the lens will be  $30 \times 3 \div 12 = 7\frac{1}{2}$  inches.

On the other hand, the focus of the lens may be limited, there being only one for the camera, say a 6-in. lens. The operator requiring to know how far he can get from his screen in order to get a picture a certain size works on another formula. Take the size of picture required, multiply by the focus of the lens and divide by three, the slide opening. Thus: size of picture twelve feet, focus of lens six inches,  $12 \times 6 \div 3 = 24$  feet.

## **The Light.**

The illuminant is a factor which is very important, but the universal use of electricity has solved this question quite effectively. Gas-filled coiled-coil lamps can be procured specially for lantern work, and these should be used in every case where it is possible. They are obtainable with reflector backs incorporated in the bulbs, and give a maximum of light with a minimum of trouble—provided the right voltage is employed.

Arc lights are still used in some clubs, but one disadvantage about these is the noise they make, especially if the operator is not accustomed to handling them. The carbons need to be fed very steadily indeed to prevent a distracting effect on the audience. Limelight is not often used now in the face of the more efficient electric light, but it can be very effective where electricity is not available.

The next point to get right is the evenness of the illuminated disc on the screen. This is a matter of

getting the light centred on the condenser, and if any tinge of blue can be seen on any part of the disc on the screen, then the light is not being projected through the condensers correctly. The light should be moved backwards and forwards and from side to side, and no pains should be spared to get this correct, as once the job is done no further adjustment need be made for the rest of the show.

## **Handling the Slides.**

Most operators keep an old slide for focussing purposes, and thus they are able to get the lens practically focussed on the screen before handling the lecturer's slides.

Good lecturers have their slides arranged consecutively in proper boxes, and this greatly simplifies the operator's work. A slide is dropped into the carrier, always remembering the spots go towards the bottom and rear of the slide, the picture is slid along and the slide correctly focussed. This is an easy matter with the rack and pinion, and the irritating habit some people have of continually altering the focus slightly all the time the lecture is on should be rigorously avoided.

The next slide is dropped into the vacant section of the carrier while the lecturer is describing the one already showing, and, when he gives the agreed-upon signal, is slid into place. Some lanternists cap the lens before changing, as it is considered more restful to the eyes than the shift from one picture to another.

It should have been mentioned that it is as well to have the lantern light on some few minutes before starting the show, especially on cold evenings, in order that any moisture caused by condensation may be cleared. If time permits, the entire set of slides should be warmed by placing the open box before a fire before showing; this will prevent unsightly patches of moisture spoiling the pictures.

# Have Your Camera Ready for November the Fifth

By  
ROBERT W. NEWBY.

*SOME PRACTICAL HINTS ON A TOPICAL SUBJECT THAT  
MAKES EFFECTIVE LANTERN SLIDES.*

**F**IREWORKS will be very much "in season" during the coming week, and as photographic subjects they present unbounded opportunities for exploring a novel and fascinating branch of photography. A successful exposure can often yield a very beautiful and artistic result. Moreover, they present no technical difficulties to the photographer, since they virtually photograph themselves during a time exposure, and almost any type of camera, however simple, is capable of producing good results. The only requirements are a tripod or other firm support for the camera, and a fairly fast film.

If you are attending a large public display, such as those given at the Crystal Palace, set up the camera firmly on its tripod facing the display to be taken, and watch the flight of the first few fireworks in the viewfinder. A direct-vision finder will be found to be the best for this purpose. If there is a wind it is important to take up a position where the smoke is not blown towards you, and the best results will be obtained from a vantage-point with the wind blowing broadside on to the camera. The fireworks will then be spread out across the picture, and the smoke will be blown away from the camera and so will not interfere with the exposure.

If possible, arrange the picture so as to include some trees, statues, or crowds of spectators in the foreground, as well as the fireworks themselves. This will add greatly to the artistic effect of the picture, but can usually only be done in the case of fireworks such as roman candles, which do not shoot up very high. It is generally not possible for rockets, unless the photographer stands a good distance away, when there is a danger of the fireworks themselves appearing rather small and insignificant in the picture.

Having set up the camera in the most suitable position, set the shutter at "time" and focus at infinity. The first few fireworks of the display cannot, of course, be photographed, but will have to be utilised to enable the best vantage point from which to photograph to be

"chrome" variety of films will give good results with a stop of  $f/8$  for those fireworks which give a brilliant white light, while the less bright ones should be taken at an aperture of  $f/6.3$  or even larger, if this is available, according to their brilliancy. If plates are being used they should be backed to prevent halation.

The time of exposure will be governed by the duration and brightness of the fireworks themselves. When photographing rockets, open the shutter as they ascend and close when they die away. Make several exposures on each film, as a single burst will look lost and unimpressive in the picture. The rockets are very unlikely to burst in exactly the same place, so that the picture space will automatically become filled. For roman candles, set pieces, and other ground events, the shutter should be left open as long as the display lasts.

In their own way, the small homely firework displays that are held on Guy Fawkes Night in gardens throughout the land, wherever there are children in the family, can yield just as good opportunities for attractive photographs as the large public displays, and the above hints apply equally well in either case. Short exposures only, however, are required for brilliant items such as magnesium fountains and Vesuvius cones, and one to two seconds will generally be found sufficient.

Finally, when the time comes to develop your "bag" of firework photographs, remember that as much contrast as possible is required in the negatives so that under-development must be avoided. When printing or enlarging a vigorous glossy paper will generally give attractive results. But the best effect of all, when the negatives are good, is secured by means of lantern slides and the picture projected on to the screen. The realism is quite extraordinary.

*A beautiful firework "bouquet."*

chosen. In big displays the majority of the fireworks are let off from approximately the same place, so that once the camera has been fixed up on its stand there will be no need to move it throughout the display.

If you are using a box camera, set it at the largest aperture (which is in most cases about  $f/11$ ) and load with a super-sensitive panchromatic film. For folding cameras with larger aperture lenses any of the double-coated

# ENSIGN OPTISCOPE

Enables you really to "see"  
your pictures

The projected lantern slide still remains the medium "par excellence" for showing really pictorial subjects. The quality of a picture has never been properly appreciated until it has been projected.

The present day popular miniature negatives are particularly suitable for reproduction in lantern slide form. They can be printed in "contact" size in any suitable printing frame as easily as a "contact" print, and projected to a size far in excess of the biggest enlargement.

Ensign Optiscopes reduce projection to a minimum of trouble. They are exceedingly portable; ready for use in an instant from any house lighting circuit. Unsurpassed in the excellence of their optics and the perfection of the results they give. Models for every purpose, for the home, for the small school hall and the large auditorium.

## No. 6.

Designed for use at home or in small halls. Gives 9-10 ft. square pictures at 30-40 ft. With Aldis Uno 8 or 10 in. projection lens.

No. 6A. Standard Model (without lamp) .. .. . £7 15 0

No. 6B. Traveller Model (with lamp) .. .. . £8 15 0

## No. 9.

With long range extension. For use at any distance up to 60 ft., giving a 12-16 ft. square picture. With Aldis Uno 8 or 10 in. projection lens.

No. 9A. Standard Model (without lamp) .. .. . £11 10 0

No. 9C. Traveller Model (with lamp) .. .. . £15 10 0

Extra for Aldis-Butcher projection lens, £2 in each case.

*All complete with strong carrying-case.*

ENSIGN, Limited, HIGH HOLBORN, LONDON, W.C.1

# DALLMEYER *for* AMATEUR CINEMATOGRAPHY

## NEW "POPULAR" TITLING OUTFIT.

Accommodates any make of 8-mm., 9½-mm. or 16-mm. cine camera. A universal and efficient Titling Outfit selling at a popular price. Complete with 200 white felt letters, blackboard, and two 40-watt coil-coiled lamps for the illuminant.

£3 3 0

## CRAIG SENIOR SPLICER.

A really efficient and automatic 16-mm. Splicer. Cuts, scrapes, and joins in but three simple operations .. .. £2 12 6  
Junior Splicer .. .. £1 1 0

## DALLMEYER SUPERLITE LENSES.

An entirely new departure in projection-lens design. The picture projected is brilliant in the extreme, being 25 per cent increase over normal lenses. 2 to 4 in. focal lengths .. £5 5 0  
F/1.8 series, ¾ to 4 in. focal lengths. Prices from £2 2 0

For all 8-mm., 9½-mm. and 16-mm. projectors.

## BLENDUX EXPOSURE METER.

Makes sure of dead accurate exposure for every shot that's made. Supplied in ever-ready leather case with instructions and tables.

No batteries. Nothing to renew, £4 4 0

Dallmeyer products have been before the public for over three-quarters of a century, during which time they have been acclaimed the finest in the world.

## MODEL 5 VICTOR CINE CAMERA.

The very finest amateur cine equipment manufactured. Very latest movements, turret front, visual focussing, 4 speeds and slow motion, back-turn for lap dissolves, compensating finder, etc. With Dallmeyer 1-in. f/2.9 Triple Anastigmat Lens in Micro Foc. mount .. £45 0 0  
Model 4, as above, but without back-turn £35 0 0  
Model 3, non-turret .. £22 1 0

## VICTOR CINE PROJECTOR.

Model 20 Projector, 750-watt lamp, spring-loaded double-claw, preventing damage to films, reverse, automatic rewind, etc., etc., and automatic film trip. With 2-in. Dallmeyer Max-Lite Projection Lens .. £60 0 0

## OPTICAL BENCH TITLING OUTFIT.

Any make of 8-mm., 9½-mm. or 16-mm. amateur cine camera can be used; straight titles—animated running titles—trick titles, can all be made. 480-watt illuminant enables pictures to be taken at f/4, 16 pictures per second. A fount of over 400 specially prepared white felt letters allow all variations of titles to be set up.

£8 8 0

## CRAIG SPLICER AND REWIND.

Operates in the same direction as the film is wound, simplifies rewinds and splicing. Mounted on polished wood board 32 in. long, complete with Craig de luxe Rewind and Craig Splicer .. £5 5 0

## DALLMEYER TELEPHOTO LENSES.

for 8, 9½ and 16 mm. cine cameras. For obtaining large-scale images of distant objects. Made from 1½ to 12 in. focal length, with apertures from f/3.3. From .. £4 4 0

## TABLE-TOP STAND.

Measures but 4 in. diameter, wafer thin, suitable for all makes of cine cameras.

3s. 6d.

## THALHAMMER.

Kine-Pano Tilt and Tripod. The perfect Tripod for amateur cinematography, fitted with panoram and tilting top and every possible movement. Rigid, light and beautifully made.

Junior Model £6 10 0  
B.L. Model .. £10 0 0

# COLOUR LANTERN SLIDES

By  
E. A. MILLER.

## *Simple Home Processing of Dufaycolor Films*

The ideal method of making Transparencies in Natural Colours.

**C**OLOUR photography for the ordinary amateur has undoubtedly arrived with the Dufaycolor film—one loads the camera in daylight with a standard roll film, and proceeds to snap one's favourite subject in natural colour, without filters, tripod, or other impedimenta common to the more pictorially-minded amateur. Exposures are shorter than with any other colour process—about double that which would be given to a film of normal speed.

The roll of film, when removed from the camera, can be passed to a dealer for processing, and the resulting film transparencies are returned to the photographer in all their beauty of natural colour, neatly framed in black card.

### **Home Processing.**

Trade processing, however, is expensive, and home processing of colour films is a simple and fascinating pastime, besides being so cheap that the final cost of the picture is almost halved.

The necessary chemicals may be obtained ready for use—a 4-oz. bottle of Agfa colour developer and a 2-oz. bottle of Agfa reversing solution are all that is required to carry out the entire process. Messrs. Burroughs Wellcome also supply the necessary chemicals for the purpose in "Tabloid" form.

The Agfa developer is diluted one part in four as directed, the temperature being kept as near 65 degrees as possible. (This is most important.) The reversing solution is diluted one part in ten of water, also at 65 degrees, and a bowl of clean water at the same temperature completes the requirements.

### **In the Dark-room.**

The film is unwound in complete darkness and run through the dish of water. As all screen-colour plates and films are exposed with the uncoated side towards the lens this fact must be kept in mind when developing, and the film turned with the inward curl *downwards* in the dish of developer, otherwise abrasions and uneven development will occur.

Still in complete darkness the film is see-sawed through the developer for exactly four minutes, taking great care that the two ends of the film receive as much time in the developer as the middle. An accomplice on the other side of the dark-room door to call "time" is very useful at this stage of the proceedings.

At the end of the four minutes the film is removed from the developer, again rinsed quickly in clean water and transferred to the reversing bath. The used developer must not on any account be thrown away. The total time

required for reversal is three minutes, but after one minute in the reversing bath, white light may be turned on, or the film taken out into daylight.

It will be found that the film now resembles a slightly under-exposed ordinary film when looked at in the dish, but if held to the light (not sunlight) the colours will be visible, through a kind of all-over darkness. This will gradually disappear in the reversing bath, until at the end of three minutes the film should show quite plainly all the colours of the original subject, although they will appear somewhat weak.

### **Redevelopment.**

At the end of the reversal period the film should be held up to ordinary daylight for about 30 seconds. Bright artificial light will serve, but daylight seems in practice to be preferable. Another short rinse in water, and the film is run through the *used* developer for a further three minutes in daylight, when all the colours should appear brighter and stronger than before redevelopment. Careful washing in running water for not longer than five minutes completes the processing, but care must be taken that the film does not curl or twist in the washing water, as this would certainly cause scratches on the delicate emulsion.

A good plan is to fold the film into a loop, clipping *both* ends to the side of a 10×12 dish with a wooden clip-peg. Drying should be carried out as speedily as possible, preferably in a draught of warm air, or about three feet from a fire.

The length of film may now be cut up, and each individual one be examined for errors in exposure. If temperature of solutions and time of development are kept absolutely standard at all times, the variable factor of exposure can be dealt with as indicated, but on the first film errors are bound to occur.

### **Under- and Over-Exposure.**

As Dufaycolor is a reversal process, under-exposure will yield heavy, dark positives, whilst over-exposure will produce wishy-washy, colourless effects. Both of these errors can be remedied to a limited extent after processing, providing the fault is not excessive.

For under-exposure (dark positives) fresh reversing solution diluted 1 in 100 parts of water is quite suitable and most convenient, or a solution of ferricyanide and hypo about double the strength usually advocated for negatives, may be used. Reduction must be carefully watched with either solution, and the colour positive removed just before the action has gone far enough.

Over-exposure (thin positives) is less amenable to treatment, but slight

improvement may be made by intensification with the usual mercury solution, which can also be purchased ready for dilution. This has the effect of slightly darkening the emulsion, but does not help in recovering the lost brilliance of the subject. Both these after-processes must be followed by a short wash in running water.

In all colour processing this shortness of washing must be remembered, for the reason that the emulsions are more delicate than ordinary negative emulsion, and as no hypo is used in the processing, risk of deterioration from that source is eliminated.

### **Lantern Slides.**

In the 2½×3½ size, Dufaycolor positives lend themselves admirably to the making of colour lantern slides, and as this is undoubtedly the finest method of presenting a good transparency, there is little doubt that more colour slides than ever will now find their way into exhibitions and lantern lectures. The film positives have an advantage over glass ones in that they can be trimmed to any convenient size, masked on one cover-glass, spotted, covered with a second protective glass and bound.

If necessary, a finished lantern slide can be produced within half an hour of making the original exposure by this process, but this is not always desirable.

### **Dryness Essential.**

It will be better always to make sure the film is absolutely dry before attempting to bind it up as a lantern slide. The glasses, which should be perfectly clean, should be warmed, and as a further precaution the film should be varnished with a special varnish that can be obtained for this purpose.

The reason and necessity for this special attention to dryness is that any trace of moisture in the slide—between the glasses—will cause trouble when the slide is placed in the lantern and the heat from the light and condenser reaches it. In any case, slides made from colour films should not be left in the lantern too long or the celluloid base may buckle.

Dufaycolor is without doubt the greatest advance in direct colour photography yet made, the transparencies really *are* transparent, and nature's colours are faithfully reproduced, especially the greens, blues and yellows. This would appear to be due to the absence of a filter in exposure. The introduction of colour on roll film has brought colour within the reach of the veriest tyro, no matter how meagre his technical experience, and offers the ambitious amateur the opportunity of a new thrill in his hobby.

# Making Miniature

from modern miniatu

Carrying the pictures for a lantern lecture in your waistcoat pocket. This small tin holds a film of 50 pictures; transparencies made by contact from miniature film. A similar tin, under two inches in diameter, would hold a roll of 250 pictures.

To make the little transparencies a special printer is obtainable. The illustration shows its form and size. To open it for use the back is unfastened by pressing the catch on top.

Remove the left-hand spool (knobs towards you) and wind on a length of slow positive film in the light of a bright red safelight.

Place the wound spool in the printer and bring the end of the film through the opening. Emulsion side up.

Bring the film across, and tuck the end into the clip on the second spool.

Put on the lid of the printer.

Place the negative to be printed in the slide provided in the lid, emulsion side towards the positive film, and draw it through until the desired picture is framed by the window.

Close the lid of the printer, which holds the films in contact with each other.

On this page the illustrations show the method that can now be adopted by the user of a miniature camera taking 35-mm. ciné film for the production of a strip of miniature transparencies that can be kept in a roll and displayed in the same manner as lantern slides.

Exposure is made by holding the loaded printer near a lamp. On an average negative, 1 second from a 75-watt lamp at a distance of 1 foot is about correct. Test exposures on single strips of film should be made before exposing a long strip.

Free the lid, and wind on the positive film by the knob on right-hand side. There will be a click to indicate when the film has moved on one picture. All the foregoing—with the exception of the exposure—is done in the red light of the dark-room.

When the positive film has all been exposed, it is removed for development.

# Lantern Slides

negatives and projecting with a miniature lantern

On this page the Leitz small projector is shown and its movements illustrated in use for projecting a roll of contact transparencies from miniature films. By the use of this piece of apparatus a complete lecture can be embodied in one roll of film and the entire apparatus for a lantern lecture carried in a small case. This is the logical development of the miniature camera applied to lantern work.

By unscrewing four milled nuts the front can be removed.

Placing the roll of positive film in the spool drum, the end of which is guided round towards the sprocket.

To change the picture, the knob is pressed inwards and turned.

And a small attachment replaced that will take miniature lantern slides.

Once the teeth of the sprocket have become engaged with the perforations of the film (standard cine film) it is fed automatically through the carrier (or gate) by turning the knob.

To show the picture the knob is raised, when the tapered end releases an arm that disengages the sprocket and two glasses press together in the carrier, locking and keeping the film flat.

Single lantern slides, which can be made by contact printing from miniature film, are fed in the carrier against the pressure of a spring.

To project an upright picture, a small catch is freed, and the front is turned to a vertical position.

The size of the picture projected, and the distance of the lantern from the screen, is controlled by the use of the various lenses supplied for the Leica camera or enlarger (different focal lengths).

A glass that can be easily removed from the back of the carrier is provided to collect any possible condensation.

# A Lantern-Slide Box

By  
J. STOBBS.

AN interesting evening may be spent in the construction of a lantern-slide box, similar to the one shown. One great advantage this type of box possesses is, the slide enthusiast will be able to handle his slides by the edges and so avoid unwanted finger-marks.

Very little skill is required in its construction, and no difficulties should be encountered. Three-ply wood, being strong and light, is quite suitable for our purpose, and this may be obtained from a tea-chest if desired. The two end pieces, however, should be  $\frac{3}{8}$ -in. thick.

Fig. 1 shows a view of the box with lid removed and the sides lowered. Fuller details of the sides, ends and partitions are shown at Fig. 2. The top and bottom pieces are plain rectangles of plywood cut to the sizes given.

A cutting list is given, but these dimensions may be varied to suit individual requirements, although these sizes are suitable for most needs.

A.—Sides. Two required,  $11\frac{1}{2} \times 4-3-16$ ths in.

B.—Ends. Two required,  $4 \times 3-5-16$ ths  $\times \frac{3}{8}$  in.

C.—Partitions. Four required,  $3-11-16$ ths  $\times 2\frac{3}{8}$  in.

D.—Top. One required,  $11 \times 3-5-16$ ths in.

E.—Bottom. One required,  $11\frac{1}{2} \times 3-5-16$ ths in.

The inside measurements of the box are  $10\frac{3}{4}$  in. long,  $3-5-16$ ths in. wide and  $3-9-16$ ths in. deep. A slide will be a

halves drop outwards, thus giving access to the slides at the edges.

The partitions are cut to shape, as shown in Fig. 2, and rounded along the top edge, afterwards being tenoned to the sides. A fretsaw will be of service when cutting the tenons, but this is not absolutely essential. A groove is cut in each end-piece, near the top, the lid fitting into this.

Each piece of wood is smoothed over with fine glass-paper, and afterwards the box is assembled, being glued and tacked where necessary. Hinges are screwed to the places indicated and the sides fastened to the ends with small catches. Owing to the weight of the slides, it is advisable to fix a handle to each end, and as a further precaution, a leather strap should be passed right round the box from end to end.

To obtain a better finish, cover the box with leatherette cloth. This will effectively hide any joinings, and also any printing that possibly would be found on the plywood.

Our lantern-slide box is now complete, and will hold approximately eighty slides. If reasonable care and accuracy has been taken in its construction it will give years of good service, but obviously is not intended for sending slides by rail.

nice easy fit to these measurements. It will be noticed that the sides are in two pieces, and when hinged, the top

## “The A.P.” Monthly Competitions

### PRIZES AND RULES.

#### (I) For Advanced Workers.

This class is open to all amateur photographers. First Prize.—One guinea in cash or “A.P.” silver plaque (optional).

Second Prize.—Half a guinea in cash or “A.P.” bronze plaque (optional).

Third Prize.—Five shillings in cash.

A special prize of five shillings in cash for the best mounted picture.

#### CERTIFICATES OF MERIT.

In addition to the general rules (see below), the following conditions apply:—

(1) All prints must be accompanied by a stamped addressed envelope or wrapper if they are to be returned. Prints receiving an award will be retained.

(2) Prints must be mounted, but not framed.

(3) Returnable prints in the Advanced Section will be sent back with a typed criticism, and classified according to merit.

(4) Prints may be of any size and by any process, and must be the competitor's own work throughout.

(5) The award of a prize or certificate in the Advanced Workers' Competition or any other competition or exhibition will not debar the competitor from entering again on future occasions and winning further prizes.

#### (II) For Intermediate Workers.

This class is to encourage those readers who have passed the “beginner” stage and may have won an award in the Beginners' Competition, but have not progressed sufficiently to enter in the Advanced Competition.

First Prize.—Half a guinea in cash.

Second Prize.—Five shillings in cash.

#### CERTIFICATES OF MERIT.

In addition to the general rules (see below), the following conditions apply:—

(1) No print must be larger than  $10 \times 8$  in., and can be by contact or enlargement by any process, and may be mounted.

(2) The whole of the work (exposure, development, printing, etc.) must be carried out by the competitor.

(3) Prints entered in the Intermediate Section will be criticised and returned if accompanied by stamped addressed envelope or wrapper. Prints receiving an award will be retained.

(4) The award of a prize or certificate in the Intermediate Competition debars the competitor from entering this competition again, but he is then eligible for the Advanced Workers' Section.

#### (III) For Beginners.

This class is open to those who have never won an award in any photographic competition or exhibition.

First Prize.—Half a guinea in cash.

Second Prize.—Five shillings in cash.

#### CERTIFICATES OF MERIT.

In addition to the general rules (see below), the following conditions apply:—

(1) No print must be larger than  $6 \times 4$  in. Contact prints or small enlargements up to this size are eligible, but must be unmounted.

(2) The exposure must have been made by the competitor, but developing and printing may be the work of others.

(3) No prints can be criticised or returned.

(4) The award of a prize or certificate in the Beginners' Competition debars the competitor from entering this section again.

#### General Rules.

(1) Any number of prints may be entered, but each print must have on the back the appropriate coupon

(see advertisement pages) the date of which must be within five weeks of the closing date of the competition. Overseas readers may use the most recent coupons to hand.

(2) Each print must have on the back the name and address of the competitor, and the title.

(3) All entries must be addressed to The Editor, *The Amateur Photographer*, Dorset House, Stamford Street, London, S.E.1, and the package must be marked on the outside “Beginners,” “Intermediate,” or “Advanced,” as the case may be.

(4) No packages will be received on which there are postage charges to be paid.

(5) No communications on other matters should be enclosed with competition prints. No correspondence in connection with the competitions can be undertaken.

(6) The entry of a print will be regarded as a declaration that it is eligible under the rules, and that the competitor agrees thereto.

(7) No responsibility is taken for the safety of prints, and the Editor's decision on all points connected with the competitions is final.

(8) The publishers of *The Amateur Photographer* shall have the right to reproduce, without payment, any print entered, or to allow its reproduction in any other paper quoting from *The Amateur Photographer*.

(9) The closing date of each competition is the last weekday of the month. Prints arriving late will be entered for the next month's competition.

(10) The cash prizes awarded in these competitions are dispatched on the fifteenth of the month following the announcement of the awards.

The closing date for the October competition is Thursday, October 31st, and for the November competition, Saturday, November 30th.

# THE LANTERN LECTURE

THE lecture illustrated by photographic slides shows no signs of failing in popularity. The term lecture is an unfortunate one, although as far as we know there is no other word which serves the same purpose. An illustrated talk or travelogue may sound more attractive, but they both amount to the same thing.

## The Subject.

The good lecture is but a story, and a story well told. If the subject is a technical one the story can be made interesting by telling the story in the form of stages of progress, let us say, from the raw material to the finished product. If the story is connected with travel at home or abroad, the various places and incidents must be connected.

An enthusiast can generally manage to inspire interest in others for the time being. It does not follow that the lecture will appeal to everyone, and there may be some present who already know part of what the speaker is to tell them. It is necessary that the speaker should have personal knowledge of the subject, and be capable of imparting it so that those who have not the knowledge of elementary principles will have these imparted to them as briefly, and simply, as possible.

## The Slides.

There should be plenty of slides. If the speaker is dealing with one phase of a subject that may well be illustrated by one slide, it is well during the moments that the slide is on the screen to change it for another that may be the same subject

This article comes at a time when many photographers will be considering their first lantern lecture. It is written by a lecturer of considerable experience, and deals with points that make for success.

from a different angle. This keeps the audience interested.

The speech should be connected with the slides. It is a mistake to deal with some point, no matter how interesting, that is not illustrated. The speaker may know the subject well, but he has to place himself in the position of the audience who do not.

Having made the slides, they should be arranged according to the order in which they are to be used. The talk may then be adapted to them. This is the plan that most lecturers adopt, unless they are in the fortunate position of being able to arrange the lecture and then produce the slides to illustrate it.

## The Lecture.

Many people, and especially those who are not familiar with speaking in public, approach their first lecture with some trepidation. This is especially likely if sufficient time is not devoted to the subject beforehand.

The whole course of the lecture should be decided upon and notes made. It should then be written out in full and carefully read. This will avoid a common fault, repetition. It will also ensure that any point that the lecturer feels the need to emphasise, of a technical nature that wants preliminary explanation, is dealt with in its proper place.

Technical terms should be avoided, except in the case of an audience familiar with them. In the case of a general audience they should be first explained, and of course illustrated. Speakers who are authorities in their own field frequently omit to realise that

those who form their audience are not.

Opinions differ as to whether a lecture is better read or spoken without notes. There is no doubt that the latter "gets across" much better, but the attempt to do so may spell disaster in the case of a beginner who is not familiar with public speaking, and who may well find his carefully prepared discourse leave his mind at the critical moment.

On the whole it is better for a first attempt to have the talk written in full, with paragraphs numbered to correspond with the slides, so that in the event of "nerves" the speaker can carry on with his notes.

The length of the lecture is a matter of opinion. It depends upon the lecturer's ability to sustain interest in his subject, and it is better to finish leaving the audience with a taste for more. Experience suggests that one hour is the ideal.

The lecturer should be at the hall well before the time of the lecture to meet the operator, and to arrange for the signal for the change of slide. Some halls are fitted with an electric signal, but in most cases the "clicker" has to serve.

A final word as to the delivery of the lecture. The speaker should utter each word distinctly and slowly. He must realise that some members of his audience may be hard of hearing. If a reference has to be made to a picture on the sheet, and some detail pointed out, the speaker should do this and then face the audience again. The habit of some lecturers of addressing their remarks to the screen is very annoying. R. F.

## Exhibitions and Competitions

CURRENT AND FUTURE.

Notices of forthcoming exhibitions and competitions will be included here every week if particulars are sent by the responsible organisers.

The Amateur Photographer Monthly Competitions for Beginners, Intermediate and Advanced Workers. Entries, October 31. Rules in this issue.

The Amateur Photographer Annual Lantern-Slide Competition. Last day for entries, October 31.

Irish Salon (to be held at Mansion House, Dublin).—Open, November 2-9. Particulars from Hon. Secretary, Irish Salon of Photography, 18, Morehampton Road, Dublin.

G.W. Rly. "Camp Coach" Holiday Competition.—Prize, one's week's holiday in camp coach during 1936 holiday season. Photographs should depict any aspect of camp coach holiday. Entries due, October 31. Further particulars from Superintendent of the Line, G.W.R., Paddington Station, W.2.

Seventh Western International Photographic Salon.—November 23-30. Organising Secretary, W. H. Hill-Muchamore, 24, Church Road, Redfield, Bristol.

Cape of Good Hope International Salon (under the auspices of Cape Town P.S.).—Entries due, November 19; open, January, 1936. Hon. Salon Secretary, Richard Dekenah, P.O. Box 2431, Cape Town, South Africa.

IXe International Kertsalon Fotografische Kring "Iris".—Open, December 22-January 5, 1936. Entries close, November 15. Particulars and entry forms from J. Van Dyck, Secretary, "Iris," 69, Ballaerstraat, Antwerp.

Third (Second International) Wilmington Salon of Photography.—Open, January 6-26, 1936. Last day for entries, December 15, 1935. Particulars and entry forms from the Salon Committee, Delaware Camera Club, P.O. Box 818, Wilmington, Delaware, U.S.A. Leicester P.S. International Exhibition.—Entries, January 24, 1936; open, February 24-March 7, 1936. Exhibition Secretary, H. Foscutt, 19, Doncaster Road, Leicester.

The 40th Annual Exhibition of the South London P.S.—Open, February 15-March 14, 1936. Entries close, January 21. Further details and entry forms from Hon. Exhibition Secretary, H. S. Adams, 40, Stockwell Park Road, London, S.W.9.

Scottish National Salon.—February 8-29, 1936. Entries close, January 11. Particulars and entry forms from the Hon. Salon Secretary, Norman G. Brown, 36, North Lindsay Street, Dundee.

Ilford Photographic Society.—Annual Photographic

Exhibition. From Monday, March 2 to Saturday, March 7, 1936. Closing date for entries, Saturday, February 1, 1936. Particulars and entry forms from E. G. Roughton, 63, Havering Road, Romford, Essex.

City of London and Cripplegate Photographic Society.—Thirty-first Annual Photographic Exhibition from March 16-21, 1936. Entries close, February 10, 1936. Particulars and entry forms from the Hon. Exhibition Secretary, A. C. Mundy, 11, Monkham Lane, Woodford Green, Essex.

Ville Salon International D'Art Photographique de Bruxelles, 1936.—Open, from March 21-April 5, 1936. Entries close, February 25. Particulars and entry forms from M. M. Devaivre, 152, Rue Markelbach, at Brussels 3, Belgium.

Darwen Exhibition of Photography.—April 20-May 2, 1936. Entries close, March 19. Particulars and entry forms from the Secretary, J. H. Woods, South Down, Bolton Road, Darwen.

Bristol Photographic Society.—Second Annual Open Exhibition from May 2-19, 1936. Entries close, March 28. Particulars and entry forms from the Hon. Exhibition Secretary, Percy V. Cave, 36, Coldharbour Road, Redland, Bristol, 6.

October 30th, 1935

# NIGHT

By GEO. A. SLIGHT.

*Midnight. A time exposure was given for this subject. Note the effect of a movement of the arms of the figure.*

THE difficulties which beset the path of the night photographer *decrease* as the days grow shorter. The season when one has to wait until it is almost time for bed before setting out on a night ramble has now departed, so let us away to the lights and see what we can capture.

Night photography offers wonderful opportunities for picture-making, especially in cities, and no method of presenting night pictures is comparable with lantern slides. When lighted lamps are included they glow with real light when seen on the screen, and the luminous effect of a good slide adds enormously to the illusion.

In dealing with these subjects, there are several points to observe if successful compositions are wanted. After having

*Sleepy River.*

*Broadway. Note the value of the foreground shadows in helping the composition.*

foreground, but would introduce the very life or feeling of the road or street.

Where there are trees lining the pathway I would advocate that the shadows of the leaves be used to the utmost advantage. Certainly shadows are not "objects," but these shadows and patterns cast by the lamps on the

# Photography

## An Ideal Subject for the Lantern-Slide Pictorialist.

pathways can be very interesting, all the same; and when there is a slight mist about, the beams cast by the lamps shining through the tree-tops are an added attraction, and transform the most ordinary scene into one of great beauty.

A capital arrangement for this class of picture is to have the beams running diagonally across the picture space; the tree-top and lamp up in one quarter, and the cast shadows of the leaves in the opposite (lower) quarter. Natur-

*The Coffee-stall.*

*Unilever House, from Blackfriars.*

ally, it will be best not to include anything else with a strong competing interest, such as another near-by lamp, but the middle distance, etc., can then be completed by almost anything.

When the weather is wet there is ample interest in the reflections alone. Keen photographers who are willing to brave the elements will be rewarded by fine pictures. If one happens to be photographing at a place where there are cobblestones or flagstones, etc., what can look better than the myriad of reflected lights shining from these surfaces? Such things as these should be made the most of, for the subjects will of themselves make admirable pictures and beautiful lantern slides.

Then, again, there are the lamps themselves. Nowadays there are all sorts and varieties of lamps, some

of them quite picturesque; indeed, many of them are well worth an exposure all to themselves at night, but if a figure can be introduced, so much the better. This is where a friend comes in useful.

With the modern high-speed panchromatic film and plate, exposures, especially if a small camera with large aperture lens is used, can be cut down to a minimum. With S.S. pan. film and  $f/3.5$ ,  $1/5$ th sec. will usually give ample exposure. If slower material and smaller apertures are used the exposures may run into minutes, and a tripod then becomes a necessity.

*Aldwych. Here a very brilliantly lighted street, with no lamps included in the picture, has produced nearly a daylight effect.*

# NEWS AND REVIEWS

ITEMS OF GENERAL INTEREST FROM ALL QUARTERS.

An autumn and winter photographic competition for "Everyday Snaps" is announced by our contemporary *Weekly Illustrated*. There are no conditions, and a free entry form is published. Any subject can be entered. An award of £1 is paid for every picture published, and a prize of £50 will be given for the best snap submitted during the run of the competition.

A lantern lecture, entitled "A Tirolean Journey," will be given by Mr. F. S. Smythe at the Hammersmith Hampshire House Photographic Society, on Wednesday, November 13th. Mr. Smythe's name will be familiar to those who have seen his films and read his books in connection with the Kangchenjunga Expedition of 1930, the Mount Kamet Expedition of 1931, and the Mount Everest Expedition of 1933. The lecture is a new one, and deals with a holiday in Tirol. Seats can be reserved for this lecture at a small charge on application to Mrs. L. A. Jenkins, 12, Colehill Gardens, Fulham, S.W.6.

Only two years old and reorganised, the Coventry Amateur Film Society is going ahead with its winter programme. This programme should be an outstanding success, for during the season a new production by the members, entitled "Cross Purposes," from the pen of Mr. V. Tayton, and also holiday travel films produced by individual members, will be projected at the Society's private theatre in Spon Street, Coventry. This society represents two groups, technical and acting members. Under the former section several able camera-men contribute largely towards the success of the society. The little "theatre" seats approximate seventy, and performances are given every Monday evening. The secretary is Mr. L. Bonham, 183, Spon Street, Coventry, who will be pleased to forward details to prospective members.

The offer by the *Daily Herald* of a cash prize of £2,500 for a single photograph resulted in an enormous entry—probably a record for any similar competition. The award was finally made to Mr. R. Jenkins, of 6, Monmouth Road, Bayswater, W.2, who is to be congratulated upon his successful effort. Messrs. R. F. Hunter Ltd. inform us that Mr. Jenkins used a Rolleiflex Camera in securing the negative for his winning print.

A novel lecture, "Anecdotes—plus some puzzles," that Mr. Geoffrey E. Peachey, our Advertisement Manager, delivered for the first time at Brighton and Hove Camera Club, makes one wonder if women are less observant than men. The lecture consisted of a series of photographs of everyday household objects taken from unusual angles. These in the form of lantern slides were projected on to the screen and the task of the audience was to identify the objects. A prize was given to the member of the audience making the highest score. The prize-winner—a man, secured 56 per cent accurate; the second—also male, 51 per cent, whilst the nearest lady obtained only 14 per cent. Possibly the ladies may plead that they obtained greater enjoyment from the stories with which the lecturer helped to distract attention from the slides!

The Wallace Heaton "Life" Photographic Competition attracted a very large entry. The final award for the first three prizes have been made to (1) Edgar Rawnsley, Ribble Dene, Menston in Wharfedale, Yorks ("This Freedom"); (2) G. R. Rookledge, 7, Griffin Avenue, Moreton, Cheshire ("Sticklebacks"); (3) Miss Penne-thorne, Lindfield, Haywards Heath ("Welding"). In addition there were numerous consolation awards, the winners of which have been communicated with direct.

On Sunday next, November 3rd, the Southern Railway is including in its third monthly ramble programme, a photographic party to go by special train to the district of Balcombe Lake, Valley of Rocks, etc. This party (leader Mr. A. E. Daly) leaves Victoria at 9.50 a.m.

The Ilford Photographic Society announces that in connection with its Annual Exhibition in March, 1936 (see Exhibition Notices), a special class for users of miniature cameras is being organised. Enlargements only will be accepted, negative size being restricted to 2½ in. square or less. Full particulars and entry forms from Mr. E. G. Roughton, 63, Havering Road, Romford, Essex.

Owing to pressure of work, Mr. H. Burgess has been obliged to resign from the secretaryship of the South Shields Photographic Society after fifteen years in office, and Mr. L. Farrage, of 57, Wouldhave Street, South Shields, has been appointed to succeed him. Mr. J. C. Smith, of High Dock House, South Shields, will assist him in the duties of the office.

The 1936 edition of the "Wellcome" Photographic Exposure Calculator, Handbook and Diary is now available. For many years this publication has been one of the most popular little handbooks for photographers in all parts of the world. The contents of the new edition have been thoroughly revised, the exposure and development factor tables having been brought up to date. The value of the Exposure Calculator has been enhanced this year by redesigning the calculator disc to accommodate the new plates and films of higher speeds. The monographs on subjects of practical interest to photographers include those on development, intensification, printing, enlarging, toning, staining, colour photography and infra-red photography. For the ciné worker, a section on exposure and development of ciné films is included. The annual, in its familiar green wallet cover, costs but 1s. 6d., and is obtainable at all dealers.

## "The A.P." Monthly Competitions

### AWARDS FOR SEPTEMBER.

THE entries for the September Competition included a remarkably fine lot of pictures in the Advanced Workers' Section, many being well up to exhibition standard, while those in the Beginners' Section constituted a record in the matter of numbers. The Intermediate Section was also good, both in quantity, and quality and the prints as a whole were of high merit throughout. The awards are as follows:—

#### ADVANCED WORKERS' SECTION.

First Prize.—"An Old Subject in a New Light," by William R. Thorpe, 6, Sissinghurst Road, Addiscombe, Surrey.

Second Prize.—"St. Saphorin, Lavaux, Switzerland," by Major D. J. Steevens, Laurels, Headley, Bordon, Hants.

Third Prize.—"A Bath," by G. Tschernochvostoff, Idrottsgatan 22 A 10, Helsingfors, Finland.

Mounting Prize.—"Frieze," by Donald O. Searby, Watendlath, Chester Road, Sutton Coldfield.

Certificates of Merit.—"Youth," by Yahya Arif, 6, Rue Ismail Pacha, Garden City, Cairo, Egypt; "The Spot Light," by T. G. Corkill, No. 5, 3rd Avenue,

Village Deep Cottages, Johannesburg, South Africa; "The Corner—Night," by George A. Slight, 18, Ewelme Road, Forest Hill, London, S.E.23.

The prints not receiving awards have been grouped, those in the first group receiving Honourable Mention. The others have been marked Class 1, Class 2 and Class 3, respectively.

Those awarded Honourable Mention are as follows: Edward Alenius (Jamaica); Yahya Arif (Cairo); Mrs. N. Ashmore (Burton-on-Trent); F. Annis Burrows (Chalfont St. Peter); J. H. Clark (London, S.E.); S. H. Clarke (Lytham St. Annes); J. F. Cutler (Edgware, Middx); R. C. Dye (Tring); W. Ecclestone (Shrewsbury); Frederic Finch (Stoke-on-Trent); B. R. Fishwick (Prestbury); W. J. George (Micheldean, Glos); P. A. Harrison (Wood Green, N.); R. C. L. Herdson (Herne Hill); William Jackson (Hull); R. C. Jude (St. Ives, Hunts); Sorab J. Kharegat (Bombay); Max Pethick (Leicester); George A. Slight (London, S.E.); Captain G. Tanner (Nairobi); G. Tschernochvostoff (Helsingfors, Finland).

#### INTERMEDIATE SECTION.

First Prize.—"Stuiben Fall," by Egerton Ryerson, St. Stephen's Vicarage, Shepherds Bush, London, W.12.

Second Prize.—"Bunty," by Eumyn Eyles, 12, Sefton Road, Mile Oak Road, Portslade, Sussex.

Certificates of Merit.—"Late Call," by A. T. Grubb, 41, Grasmere Avenue, Acton, London, W.3; "Condendences," by M. Holt, 85, St. Margaret's Road, Bradford, Yorks; "Study," by J. R. B. Moore, 436a, Bromley Road, Bromley, Kent; "Sunset," by Asghar M. Quettawalla, Dalhousie Road, Rawalpindi, India.

#### BEGINNERS' SECTION.

First Prize.—"Still Life," by L. Wheatley, 38, Saville Street, South Shields.

Second Prize.—"The Fog Descends," by E. G. Roughton, 63, Havering Road, Romford, Essex.

Certificates of Merit.—"Naughty," by J. Campbell Rose, 70, Fulwood Avenue, Alperton, Wembley; "Hope, S. Devon," by Bernard G. Franklin, 10, Brandwood Road, King's Heath, Birmingham, 14; "Arklow," by F. McCarthy, 9, Helsby Road, Aintree, Liverpool, 9; "The New Boat," by C. Wells, 65, Harebreaks, Watford.

# How I make my EXHIBITION PICTURES

Methods and Ideals of well-known Pictorial Workers.

No. CCCV.

Mr. JOHN  
EYMER.

From information communicated to our Special Representative.

I AM one of that ordinary and numerous class of photographers the members of which find little time for the production of negatives except during the summer holiday period. It follows that my subjects are chiefly landscapes; and as I like my prints to be as 'straight' as possible I lay myself open to the criticism that my work is of the 'record' class rather than pictorial—a criticism which some of my friends do, in fact, offer.

"A good proportion of my work consists of lantern slides, printed either perfectly straight or with the minimum of shading during printing; and for this purpose negatives which require the least possible manipulation are essential. To obtain such negatives, or perhaps I should say in the attempt to obtain them,

I generally use a  $4\frac{1}{4} \times 3\frac{1}{2}$  roll-film camera with an anastigmat working at f/6.3. With this I use panchromatic film of high speed, and always have a K 1 gelatine filter fitted in the lens. I prefer lantern plates of the chloro-bromide type, so that the attractive warm-black colours can be obtained by direct development.

"For the print, 'The Storm Passes,' Agfa isochromatic film was used, and an exposure of  $1/25$ th of a second given through the filter at f/11, at about 10 a.m. in September. The only modification was additional exposure of the upper part.

"For enlarging I use generally a soft bromide paper, toned by the direct barium sulphide method. The tone it gives is just as rich as that of chloro-

bromide paper, and its use provides distinct advantages over the latter. In addition to the great range of surfaces and grades in bromide paper there is its much greater speed, and this permits of reduced exposures when enlarging. I find this last advantage very helpful, as I frequently make several enlargements in an evening from the same negative, with varying degrees of control in different parts of the picture, before deciding which attempt comes nearest to the effect desired.

"To the toned enlargement I usually add a narrow border of indian ink, applied with a brush, and finally rub over the surface with a wad of cotton-wool carrying a few drops of enlargement medium. This brightens and clarifies the shadows wonderfully. Such spotting as is necessary I do after mounting.

"Then comes the submission of the result to the monthly competition of the photographic society. For persistent stimulation there can be few things to equal the monthly criticism of one's fellows, or that of some independent authority consulted by the club. The result of this has been an improvement in the product of every member, and the monthly competitions and criticisms have become probably the most important and valuable features of the syllabus of the club. I must acknowledge the help and stimulus they have been to me.

"Very often some point or other has been made whereby improvement could be effected, and an attempt to incorporate the suggestion has led to something much better worth while."

(A further example of Mr. Eymer's work is reproduced on one of the centre Art pages.)

THE VALLEY ROAD.

John Eymer.

# Pictorial Analysis

Every week the picture reproduced on the art page opposite will be analysed in detail for the benefit of readers of the paper who are seeking to improve their pictorial work.

"BUSH HOUSE AT NIGHT," by G. A. Slight.

A NIGHT study, such as this, differs very considerably from any impression of the same thing under daylight conditions. Sunlight reveals everything, and obscurity in the rendering not only raises a suspicion of falsity, but also a doubt as to the technical adequacy of exposure.

Obscurity in a night impression is a natural concomitant of the conditions, and, far from being an evidence of inefficient craftsmanship, is the reverse. It is, of course, necessary that there shall be a sense of form, but the slightest indication is sufficient. More might be inclined to dispel the feeling of mystery that is so valuable an adjunct in studies of this type and introduce a suggestion of realism that would be more appropriate to the daytime; but, in this instance, a nice adjustment has been exercised and the real atmosphere of a damp and misty evening is finely portrayed.

The scale of tones, too, is very full, ranging from darks of richness and depth to lights of considerable brilliance, but the whole is in harmony, and, to a large extent, this is attributable to the presence of a good proportion of half-tone. In fact, the greys predominate, and, while the print is of excellent quality and not without a measure of luminosity, it does seem as though a lantern slide from the same negative, particularly if the soft grey-blue of the thiocarbamide process were chosen, would retain all the beauties of the print and convey the last-mentioned quality to an enhanced degree.

At all events, it will readily be appreciated that the lights, being thrown on the screen by a manifestation of light itself, would be rendered in an incomparable way, and one that could not be approached by any print. Light would be represented by light itself, instead of by a reflection, and, on this account, night studies seem to be peculiarly suitable for

treatment as subjects for lantern-slide making.

The point is mentioned because, in an issue devoted specially to lantern slides and transparencies, this subject, although a reproduction from a print, provides an instance of the sort of thing that is in mind, and one that might be employed to make a

Naturally enough, this state of affairs confers a degree of concentration that is very useful, but, beyond this, it will be observed that, contained within these boundaries of obscurity, there are three points at which there are splashes of light of varying intensity. The most brilliant of these is the galaxy of lamps at (1). On account of its brilliance, this group can be regarded as—and inevitably assumes the function of—the centre of interest, for, besides its claim to priority because of its supreme brightness, it is more strongly placed in the picture space than either of the other two. Next in order of brightness comes the reflection in the wet pavements (2) of the partly obscured lamp on the left. Its position is not so forceful as (1), but it is lighter in tone than the light in the archway at (3), which, therefore, exerts a lesser attraction still.

Light No. 2 provides an accent in support of the first, but, on account of its position, a further note seems to be needed to furnish a balanced arrangement, a function that is fulfilled by (3). With (1) in the lower reaches of the picture and (2) on the plane a stage below, the placing for the third must be at a tangent from a line drawn between them and in the upper part of the print. Hence, No. 3.

It also happens that the positions of these three lights suggest a pyramidal formation,

which may or may not be fortuitous, but which provides a yet further accession of strength.

Its finish, again, is emphasised by the connection established between the lights (1) and (2) by the line of the pavement, and, between (2) and (3), by the line of the tree on the left.

That these considerations were deliberately weighed and thought out at the time of exposure is, of course, highly improbable. Rather is it likely that they were instinctively appreciated.

"MENTOR."

slide of very high attraction indeed.

As far as the aesthetics are concerned, the feelings of light and luminosity and atmosphere might be expected to show to better advantage in a slide than in the print. This, however, is simply a question of medium, and, from the point of view of composition, that remains the same whatever the method of production. In the first place, the deepening of tone towards the margins tends to direct the attention to the central portions of the picture.

## SOME CRITICAL COMMENTS on the Beginners' prints reproduced on the opposite page

IT may not be inappropriate to remark—apropos of the theme of this as a special number—that the prints reproduced on the opposite page, because they are shown against a black background, simulate, as far as can be done by any method of printing, the effect of lantern slides shown by projection in a darkened room.

### Prints and Slides.

The actual sense of light which arises when slides are shown cannot, of course, be imitated, but, apart from this, the method of reproduction, particularly if each individual print be isolated, gives some idea of what the effect of the various subjects would be if, instead of being made into prints, they were shown in the form of transparencies or lantern slides.

From which it will be gathered that the subjects in question might very well be so treated, and, in fact, any of them would be perfectly suitable. Their white margins, too, confirm the idea, for it is analogous to the trick that many slide-makers adopt to isolate their pictures, though, as a general rule, such margins have a greater depth of tone, for clear glass in a slide—which would be a more exact equivalent—would be inclined to make too violent a contrast with the surrounding gloom.

Slide-making is no more difficult than print-making. The processes are much the same in principle, and are described in detail elsewhere in this issue; but the method of making a toned border, which can also be applied to the making of prints, is simple, and, after the print or slide has been masked in the ordinary way to provide a white or clear glass border, as the case may be, the part to be occupied by the image is covered up with another mask, usually held in position by being affixed to a piece of clear glass, and a brief exposure is given to the uncovered margin.

### Borders and Surrounds.

When the print is developed, the border shows a tone, the depth of which depends on the amount of exposure. If a double or treble surround is desired, it can be obtained by further masking and repeating the

exposure, and, in some cases, the expedient provides highly attractive effects.

But, to return to our prints: No. 1, "In Contemplative Mood," by E. C. Hunt, is a nice bit of work in its class, the figure being well posed and placed, and, with the sunlight upon her, standing out with good effect against the setting. The way in which her garments glow with light in comparison with the darker tone of the sky is excellent, and the effect, good as it is in the print, would be highly intensified if a slide were made from the same negative and shown on a screen.

Moreover, besides enhancing the effect, the magnification of the image would not only make it more impressive, but things which are scarcely discernible in the small print would attain their full value, and the suggestion of space and distance would gain enormously.

### Breadth and Space.

Qualities of this kind never seem to reach the level they should in a small print. It needs enlargement to bring them out. Whether this enlargement be effected by the making of a bigger print or by making a lantern slide and showing it on a screen is immaterial, but the impression, even if illusory, is acquired and has only to be seen to be appreciated.

The contrasts of No. 2, "Sunset," by Noel Pearson, are inclined towards excess, and in a print could be corrected by the substitution of a softer grade of paper for that originally employed. A similar expedient is possible with lantern-slide material, different ranges of contrast being obtainable, and, assuming the choice of a suitable grade, a greater harmony of tone could be secured. The way the light in the sky, from behind the clouds, and on the foam in the water would then be rendered would be exceedingly brilliant, and would convey a vastly enhanced effect.

"Buckfast Abbey" (3), by Harry Dunks, is just a shade overprinted, and the bit of foliage at the top is rather an eyesore. A repetition of the print would enable the first-mentioned defect to be corrected, but, unfortunately, the intruding foliage cannot be re-

moved without also removing essential portions of the subject material. The feeling of sunshine, nevertheless, is nicely conveyed, and the foreground shadow is most useful.

### Sunshine and Shade.

A similar shadow, if it could be obtained, would be valuable in No. 4, "A Worcester Village," by Gordon H. Beard, but the foliage on the right does not seem an intrusion as in the former, for it seems to act as a marginal mass keeping the interest within the picture.

The sky, too, is very well managed, and suggests a fine sense of luminosity. In this respect it compares very favourably with No. 7, "Village Street," by J. D. Maries, where the sky is practically devoid of tone. Could a similar degree of tone or cloud forms be introduced, the comparative value would be more or less equalised, for, in other respects, the subject matter is well chosen.

There is something of an analogy between No. 5, "The Porch, Shelton," by Jack Woolley, and No. 3; but while there is no mistake about the depth of printing in No. 5 it appears rather constricted—possibly through the absence of sky above the building—and the sunshine does not tell so well because there is not the same amount of shadow to set it off.

### Interdependent Factors.

The two factors—sunlight and shadow—are interdependent. It needs the presence of an adequate amount of shadow tone to make the sunshine evident, a fact which is well illustrated in No. 5, and, to some extent, in No. 6, "Wagon Wheels," by Louis Brown.

The latter is obviously something in the nature of a freak, and in its choice of subject matter has little to commend it. It is, however, mainly composed of shadow tone, and the sunlit areas are comparatively small; but, against so much shadow, they do show up extraordinarily well, and with just a little more along the base the effect would be better still. Technically, too, the work is good, and, in a way, it seems a pity that so much good work was wasted upon such indifferent material.

"MENTOR."

# With the Beginners

NOTES AND NOTIONS FOR THE  
LESS ADVANCED WORKER

Every week an article will appear under this heading dealing with a topic of interest to the novice in photography.

## MASKING, SPOTTING AND BINDING SLIDES.

**A**FTER a slide has been made as far as exposing, developing, fixing, washing and drying are concerned, there remains a good deal to be done before it is really finished and ready for use in the lantern. All this additional work (except the masking) is purely mechanical, and like other mechanical work needs care and skill to make a good job of it. An examination of a number of slides by different workers will soon show the great differences there may be in neatness and accuracy even with so comparatively easy a task.

Although the operations are practically the same for all slides, there are many differences in procedure. The illustrations show some of the methods, but I will also suggest alternatives. I wish I could finish a few slides so that all readers could watch the operation, which is much easier to perform than to describe.

First comes the masking. It must be assumed that the

Fig. 1.

picture has been properly positioned on the slide, and it is now necessary to block out everything that is not to be projected. This is where consideration is required. A tiny difference in the masking makes a considerable difference in the "trimming" of the picture on the screen.

Except in rare cases I consider that the only satisfactory method of masking is by sticking down four strips of opaque paper. These can be bought in assorted widths, but I find it necessary to cut most of mine, as some of the widths soon get used up. I cut them on glass, with a steel rule and a mounted safety-razor blade. The edges must be clean-cut and parallel. In Fig. 1 two such strips are in position. I cut each strip a trifle narrower than required so that I can see a very narrow margin of clear glass as a guide to correct placing.

It is not necessary to paste or gum the strip all over. In fact, it is unwise to have any adhesive too near the inner edge, for fear it squeezes out on to the picture. A touch to hold the strip in position is sufficient; the cover-glass will keep it flat.

When the slides have all been masked, strip by strip, it may be desired to put titles and spots on the mask. I used to do both with a pen and white ink, until I was frightened off it

Fig. 2.

by finding that after a time minute particles became detached and naturally found their way on to the picture. I was probably using an unsuitable white. A good plan is to do any writing in black ink on white paper and stick this on to the mask.

A cover-glass must now be provided for each slide. It must be free from flaws, at any rate where the picture will come, and must be cleaned and polished before laying it down on the masked slide, the picture side of which should also be carefully dusted, say with a soft brush.

This is my own method, but Fig. 2 shows an alternative. In this case the cover-glass has the four binding strips attached to its edges. Only about one-third of the strip is moistened

Fig. 3.

Fig. 4.

or gummed, the glass laid down on it evenly, and lifted up with the strip adhering. This is rubbed down and allowed to dry. Afterwards the slide is put face down on to the cover-glass, and the rest of the binding strips gummed, turned over the edges and rubbed down.

In my own practice I lay down a binding strip on a folded newspaper, and moisten the gum. Instead of using plain water I apply thin paste with a soft brush, giving a quick, thin coat, and giving it time to moisten the gum on the strip. Too much brushing takes off some of the gum.

Now, as shown in Fig. 3, I lower a slide and its cover on to the middle of the strip, which adheres to the two glasses. With fingers and thumb the strip is bent down on to the front and back surfaces (Fig. 4), and rubbed and pressed into perfect contact, taking special care of the corners (Fig. 5).

Here again, my own practice differs. I use a duster. This is perhaps too polite a name, but it will serve. I stand the

slide on edge with the loose, but partly attached, strip on top. Putting down a finger on the strip near one end, I run the first finger of the other hand along the top edges of the glasses, so that the strip adheres, and then run finger and thumb along with a pinching stroke that brings the strip into contact with both surfaces at once. Then I turn the slide round, and finish the loose bit of the strip—finger along top edge, finger and thumb along both sides. For all these movements, finger and thumb are covered with the duster.

Fig. 6 shows a method of "spotting." The office filing punch is used for obtaining a number of discs from gummed white paper. These are moistened, placed in position with the blade of a penknife, or a pin, and pressed firmly down. In Fig. 7 similar spots are being affixed to the face of the cover-glass after the slide has been bound. This illustration also indicates the correct position of the spots, the subject of the slide being viewed as it will appear on the screen.

I use binding strips of which one in four has title strips and spots in white, the rest of the strip being black or coloured. This strip must, of course, be affixed so that the spots are in the right position.

I find a dozen slides quite enough to finish at a sitting. These I arrange in two rows of six each. Taking No. 1, I give it its first masking strip and put it back, then I do the same, one by one, for the others. After the second round, each slide has two strips, and at last all twelve are masked. This sort of thing takes more time, but it allows for thorough drying at every stage.

The next round ends with each slide having a clean cover-glass laid on it.

Then comes what is probably an unusual round. I am not particular about adjusting the ends of the masking strips to the edges of the slide, and so some of them stick out a bit. So I pick up slide and cover-glass, hold them tightly together, and shave off the projecting paper with the razor.

Similarly with the binding strips. Each slide gets one strip at a time, and this is dry before the slide is handled again. I leave the spot strip till last.

Lastly comes cleaning up. I go quickly over one surface with a soft moist sponge—one to twelve. Then over the other surface—one to twelve. Then by a similar routine the surfaces are polished up.

Fig. 7.

# Ciné Points for Beginners, by RICARDO.

While ciné technique has much in common with that of "still" cameras, there are many other points to consider that are essential to good photography of animation.

ALL hand ciné cameras are intended to be held close to the eye in order to see the complete field of view, and while a tripod is strongly advised wherever possible, reasonably steady pictures can be obtained if the camera is held firmly against the face, as seen in Fig. 1.

Speed indicators, Fig. 2. These are the equivalent to shutterspeeds of the "still" cameras, and must not be confused with footage indicators. But because of the mechanism of the ciné shutter, all such speeds must be halved for actual exposure value, so that when exposing with, say, eight frames a second, each frame receives only 1/16th of a second's exposure. With cameras that do not possess a speed indicator, it can be taken that the shutter works the same as in the projector seen in Fig. 13, and this is sixteen a second, so that each exposure receives a 1/32nd of a second's exposure on the camera.

Fig. 3 shows the difference between slow motion and slow speeds. Bearing in mind the explanation of Fig. 2, the necessary alterations to the lens stops or apertures when changing over to different shutter speeds will be understood.

The tendency for most novices when handling a ciné camera is to expose a length of film for too short a time. It is a good guide to aim at giving a minimum of ten seconds for each shot when using sixteen frames a second, although this can be cut down as faster speeds are being used. Fig. 4.

If the picture shows too much bright area, especially for any length of time, it is very glaring and tiring to the eyes when seen on the screen. If sky and water must be shown, a filter is advisable to hold back the "whiteness" or the transparency of the finished film, Fig. 5.

Remembering that a ciné film cannot be trimmed like a "still" camera picture, care must be taken when exposing to see that the camera is held perfectly level when horizons and verticals are well in evidence. Fig. 6.

When exposing on distant views, the big feature of animation is lost unless a slightly moving figure or foreground is included. This is not only a big help towards good composition but provides variety of tone values and gives a "lead in" to the picture. Fig. 7.

When following slow-moving subjects, called "panning," not only must the subject be followed steadily with the camera but care should be taken that it is kept in the same relative position in the view-finder, vertically as well as horizontally. Fig. 8.

At normal shutter speeds, never attempt to take fast-moving subjects going across the field of view, as only a dazzling blur will be the result when it is seen on the screen. Aim at giving a three-quarter view as seen in Fig. 9.

When exposing on two or more subjects that cannot all be included at once, never "pan" the different subjects in a reciprocating manner, from side to side, as this is very irritating to follow on the screen. Fig. 10.

In such subjects it is better to make separate shots, and this is an occasion where "close-ups," Fig. 11, make a welcome change. But always remember to open up the lens aperture to one stop larger, as much of the light is cut out when a head looms up large in the picture.

When a long-focus or telephoto lens is used on the camera, Fig. 12, extra precaution must be taken to keep the camera steady, as all camera-shake will be enlarged when seen on the screen. A tripod is strongly advised.

Projecting the film, No. 13. Do not tilt the projector too much, as it is very uncomfortable for the audience to sit and have to look up for any length of time.

# Amateur Cinematography

NEWS, NOTES AND MATTERS OF INTEREST FOR ALL CINEMATOGRAPHERS USING AMATEUR CINÉ APPARATUS.

## The Show's the Thing By F. R. UNDY.

**N**OW that the dark evenings are here, and we are no longer confronted with the problem of shutting out daylight, ciné shows in the home can be carried out with much greater ease. The projection side of the hobby will therefore begin to take first place, and it should become a point with every amateur to see that shows are presented in the most attractive manner possible.

After all, the show is the real climax of one's ciné activities, and whatever care and skill has been bestowed on the production of a film it cannot be properly appreciated unless equal care and thought is given to its presentation. To beginners, of which there are large numbers at this time of the year, suggestions are naturally of the utmost value. More advanced workers, on the other hand, would also do well to peruse all the information they can obtain on showmanship; not only to gather new ideas, but also to refresh their memories.

### Film Libraries.

It is important for all concerned to acquaint themselves with the various film libraries, for even when home-made films are to be the main feature some extra material is usually required.

For those who have only recently acquired a projector it should be noted that beside gratis leaflets giving brief details of their films, most of the big firms, such as Messrs. Kodak, Ensign and Pathéscope, also provide a very comprehensive list, giving the story of each film, at a charge of sixpence or a shilling.

A convenient method of hiring films is provided by the coupon system, a book of coupons being bought and then exchanged for films as required. The more coupons one buys at a time the cheaper it works out. In the Ensign library, for example, a book of twelve costs £1 1s., whereas 80 cost £5, and each coupon allows a reel (up to 400 ft.) to be hired for a day.

For 9-mm. users it is useful to note that through Messrs. Pathéscope a number of interest films are loaned for three days without charge. These deal with the manufacture of such commodities as cocoa and toothpaste, and though issued by well-known manufacturers primarily as publicity matter they are exceedingly interesting.

It is essential to plan the shows well ahead, ordering the films three or four weeks beforehand, for at Christmas time in particular there is always an

extra rush on the libraries, and it is annoying to anticipate an attractive film and then find it is not available when required. To some extent the length of a show can be gauged when it is remembered that 100 ft. of 16-mm. film and unnotched 9.5-mm. film will run for about four minutes, and the same amount of 8-mm. for twice that time.

### The Programme.

Then there will be the arrangement of the programme to consider, remembering always to avoid monotony. The length of the whole show is the deciding factor, of course, but as a suggestion one might start with a travel or interest film, then a short comedy or cartoon, followed by a news reel or a production of one's own, and finally a story film of several reels.

Business-like methods are to be advocated, a record being kept of each show so that there will be no fear of duplicating anything unintentionally later on.

A musical accompaniment, introduced by means of a gramophone or piano, is usually a welcome addition, and to ensure success the whole thing should

be run through beforehand and the music or records placed in order.

Whatever form of music is used it should be remembered that it is only a background and must not be so loud as to detract attention from the picture.

### The Audience and the Screen.

The comfort of the audience must be considered at all times, and seats should be placed in positions free from draughts. It is well to try out the seats in turn to see that the screen is at the most comfortable height and that no one is so far to the side that the picture will appear distorted or lacking in brilliance.

Another point concerning the screen is to have some dark material in the background as this makes for greater brilliance of the picture. The whole room, indeed, should be as dark as possible during projection, so that the fire must be screened as effectively as possible. It would be a mistake to extinguish this completely, however, for a cold audience would surely be a miserable one.

A special cupboard to house the projectionist and machine would make

Firework displays provide excellent material for making striking and unusual ciné films. During the next week many opportunities will be presented that should be taken advantage of by the amateur cinematographer.

for a show *de luxe*. This is hardly possible for all, however, but most amateurs can arrange the projector behind the audience so that it does not claim attention during the show. Vibration, too, can be reduced to a minimum by standing the machine on a typewriter pad or bathroom mat. A separate little table should accommodate the reels, and room should also be found for a spare lamp and

pocket torch; and if a touch of oil is applied to the projector after brushing out any dust, and the glasses are polished with a soft piece of rag, then the amateur is well on the way to a successful show. If it is necessary to have a trail of flex across the floor, the best precaution is to cover it with a rug.

Finally, should a break occur do not spoil the continuity of the show for

longer than necessary by splicing there and then, but rethread as quickly as possible and carry on. If the break can be spliced neatly afterwards so much the better, but rather than have a bad joint leave the film as it is. In either case, it is a matter of courtesy to point the matter out to the owners, so that they may satisfy themselves before sending the film on its next journey.

## Simpler Title-Making

By  
F. E. WILLIAMS.

FROM time to time articles have appeared on the art of title-making, but it seems to me that far too little has been said about the most

Fig. 1.

Fig. 2.

difficult part of the business, namely, the actual drawing of the titles. Enough has been written recently about the photographic side and about the best kind of pen to use and so forth; but what of the amateur who finds difficulty in drawing really neat titles by hand in anything like a reasonable time? Most people can, with a little care and plenty of patience, produce a few decent letters of, say, half an inch in height, but the drawing of a number of complete titles is a different matter altogether.

On returning from my holidays recently I was faced with the production of about thirty rather lengthy titles, each of which would have taken me at least twenty minutes to draw. So I turned my attention to the method of using white cut-out letters laid on a black background.

The first step obviously was to make the letters. I commenced by drawing all the letters of the alphabet in black indian ink on a sheet of thin glazed paper of about postcard size. The small letters were made half an inch in height (see Fig. 1). This was done with a fine brush, and did not prove a very lengthy task. It will be seen from the reproduction that some of the letters are omitted. This is because the p's and d's, the q's and b's and the n's and u's are identical when cut out and need not be repeated. (This, of course, only applies to the small letters.)

Having drawn all the necessary letters, several prints were made on matt bromide postcards, using the lettered paper as a negative. These prints consisted of white letters on a dead-black ground (Fig. 2). For all ordinary titles I have found it sufficient to make four prints from the whole negative and another six from the top half only (this comprising the letters a, e, i, o, s, t, r, n, h, d, b and l). The illustrations show the small letters only. The capitals were made similarly, only two of each being required.

When dry these letters were separated by cutting round the outline of each one with a pair of scissors. This again was not nearly such a long job as it sounds, for as they were only to be used against a black background it was unnecessary to actually cut out the "insides" of the letters. The white edges were blacked with a brush and indian ink. Some finished letters are shown in Fig. 3.

These letters were then laid out to form the titles upon a sheet of black

Fig. 3.

cardboard measuring about 16×12 in., and photographed from above. Using Pathéscope direct reversal film the contrast obtained was sufficient to obliterate any shadows round the edges of the letters, the result being plain white letters against a dead-black background. A sample title produced by this method is reproduced below.

It was found that the work of setting up titles was considerably reduced by keeping the letters in separate compartments in a large tray, returning them to their allotted places after photographing each title. A set of thin pencil lines ruled on the board parallel to the longer side assisted greatly in the alignment of the letters. A knitting needle was used to finally straighten them up after placing them roughly in position by hand.

Fig. 4.

*Wait for it!*

# THE NEW PATHÉSCOPE

“ACE” 9.5-mm.  
PROJECTOR

**WILL BE READY SHORTLY**

A scientific instrument in every sense, designed upon the best cinematographic principles.

Made of solid high-pressure die castings throughout. No flimsy construction likely to get out of order quickly.

High-class optical system arranged to give easily a brilliantly illuminated picture 2 feet wide.

The “ACE” is supplied complete with a perfectly insulated resistance

Price complete

**37/6**

**PATHÉSCOPE LTD., NORTH CIRCULAR RD., N.W.2**

## The right film for you

All Ciné-Kodak Film—both 16-mm. and 8-mm.—is Reversal Film. It has the following advantages.

**FINE GRAIN.** The larger grains of silver are bleached out in reversal, leaving a super-fine grain positive which will give larger screen pictures and better definition.

**EXPOSURE LATITUDE.** Minor errors in exposure are automatically corrected during processing by an exclusive Kodak device.

Always shoot on

### Ciné-‘Kodak’ Film

Made in Panchromatic and Super-sensitive Panchromatic grades.

**KODAK LTD.,** KODAK HOUSE, KINGSWAY, LONDON, W.C.2

# PROJECTORS, LANTERNS, FILMS and ACCESSORIES—The Buyer's Guide

On this and the following pages will be found particulars of all the best-known apparatus for Ciné and Lantern work now available on the British market. For the benefit of our readers these have been grouped so that comparison can be made with a view to purchase. The addresses of the firms supplying these goods can be ascertained by referring to our advertisement pages, and in each case we suggest that readers apply to the address given for further particulars, which will be sent free on application.

## SUB-STANDARD FILM.

## SECTION I.—PROJECTORS.

(Motor-driven unless otherwise stated.)

### Agfa Photo, Ltd.

Movector Super 16, 16-mm., automatic rewind, automatic regulation of

resistance, illuminant 220 lumens, 750-ft. capacity, £75.

Movector Domestino, 16-mm., A.C. or D.C. 100-watt light, special cooling device, 400-ft. capacity, £17.

### Bell & Howell Co., Ltd.

Filmo Model 130, 16-mm., 1,000-watt, 1,600-ft. capacity, fast power rewind, radio interference eliminator, 100 to 120 volts, £124.

Filmo Model 129A, 16-mm., 750-watt, 1,600-ft. capacity, 100 to 120 volts, £60; or Model 129B with variable resistance and volt-meter, £67 10s.

Filmo Model JS\*, 16-mm. all gear driven, 750-watt, £79 10s.

Filmo Model S, 16-mm., 500-watt, belt rewind, £47 10s.

Filmo 8, 8-mm., 300-watt, interlocking controls, 200-ft. capacity of 8-mm.

film, adjustable tilt, automatic gear driven, f/1.6 Cooke lens, £41.

Filmoscope, 16-mm. Sound-on-Film Projector, complete, £200.

### Cinex, Ltd.

Paillard-Bolex G3.\* Projects all sub-standard films, e.g., 8-mm., 9.5-mm. and 16-mm., in the one unit, change over in seconds without tools or readjustments, £60.

Resistance for high voltages, £2 10s.

Special Meyer 20-mm. lens for 8-mm. detail projection, £4.

Paillard-Bolex DA, for 9.5 and 16 mm. projection in one unit, for use with talking pictures, 400-watt, £37 10s.; 400-watt resistance, £1 17s. 6d.

Paillard-Bolex G916, for 9.5 and 16 mm. projection in one unit, all gear driven, change-over without tools, for use with talking pictures and colour films. Dallmeyer 2-in. projection lens, 250-watt, £46; 500-watt, £47.

### Cinepro, Ltd.

"Home" Model, 16-mm., for 6-ft. pictures, £36.

"Standard" Model,\* 16-mm., 250-watt, speed control, interchangeable, 2 or 3 blade shutter, £60.

"Super-lux," 16-mm., for extra long throw, attachment for sound-on-film pictures, £99.

### Construments, Ltd.

"Ray." Several inexpensive projectors with hand-wind priced from 6s. 9d. to 27s. 6d. are marketed.

### Coronet Camera Co.

9.5 Projector,\* hand drive, mains lighting, 100-150 volts, or 200-250 volts A.C. or D.C. Also available for running on 6-volt accumulator, 45s.

### J. H. Dallmeyer Ltd.

Victor 20, 16-mm., special "hi-power" optical system, bi-plane filament, 750-watt 100-volt lamp, Max-Lite projection lens, £60.

Victor 21, 16-mm., 750-watt 100-volt lamp, pilot light, automatic film trip, automatic rewind whilst projector is running, £60.

Victor 25 Animatophone, 16-mm. talking projector, 1,600-ft. capacity. 10 FH Victor Projector, 500-watt lamp, Dallmeyer optical system. Price on application.

### Ensign, Ltd.

"300-B Silent Sixteen," 16-mm., f/1.8 Dallmeyer Superlite lens, automatic cooling, self-centring, 300-watt 100-volt illuminant, for any current from 100 to 250 volts A.C. or D.C., 400-ft. capacity, £29 10s.

"100-B Silent Sixteen," 16-mm., f/1.8 Dallmeyer Superlite lens, automatic

cooling, 100-watt 100-volt illuminant, for any current from 100 to 250 volts A.C. or D.C., 400-ft. capacity, £17 10s. "Mickey Mouse," 16-mm., 100-ft. capacity, hand drive, £7 10s. Motor drive, £12 7s. 6d. "Mickey Mouse," 9.5-mm., hand drive, battery model, 17s. 6d. Mains lighting model, 21s.

#### Edwin Gorse.

Ampro 16-mm., f/1.8 lens, 500-watt, all movements and stills, bronze ripple finish, £37 10s.

Ampro 16-mm. Super, f/1.6 lens, 750-watt, all movements, centralised on base for one-hand operation, thick ripple bronze finish, £48.

Ampro 16-mm. Sound Projector, f/1.6 lens, 750-watt, all movements, silent or sound projection, 20-watt full cinema volume, all bronze ripple, £175.

Egofix 16-mm., f/1.6 lens, 300-watt, all movements, forward, reverse, rewind, tilting head, all ripple gold finish, £17 10s., or with 500-watt light, £25.

Egofix 8-mm. Super, 200-watt, all movements, £12 12s.

#### Home Ciné Cameras, Ltd.

"Campro" 9.5-mm., f/3.5 lens, combined camera and projector, clockwork motor, £3 3s.

"Campro de Luxe," 9.5-mm., f/2.5 lens. This model has various refinements unobtainable in the cheaper instrument, £6 6s.

#### Kodak Ltd.

Kodascope L, 16-mm., for super projection by choice of combinations of lens and light, centralised control, lever focussing, all movements, central lubrication, bronze crystalline finish, £67 10s. without lamps.

Kodascope D, 16-mm., 300-watt, fan cooling, high-speed rewind, lever controls, £25.

Kodascope-Eight, 8-mm., A.C. or D.C., 100-watt, motor rewind, still picture device with safety screen, £9 9s.

#### Illustra Enterprises.

Illustra Projector, 16-mm., 6-ft. picture, from mains or accumulator, hand drive, £4 19s.

#### Luminos, Ltd.

"Alef-Bilcin 171," 9.5-mm., 80-ft. capacity, automatic stills device, frame adjustment, tilting by screw, all voltages A.C. and D.C., hand drive, £4 15s.

"Alef Bilcin 101," similar to 171, but capacity for 300 ft., and better lens, £9.

"Alef Junior Bilcin 85," 9.5-mm., 80-ft. capacity, all voltages, hand drive, £1 10s.

#### Pathéscope Ltd.

"200-B," 9.5-mm., 200-watt, single-nut tilting, automatic cooling, mechanical rewind, interchangeable lenses. Two models: 50-volt for A.C. mains, 110 volts to 250 volts with transformer, or direct on 50-volt supply; 110-volt for D.C. and A.C., 200 to 250 volts with double resistance, or direct on 100 to 110 volts, £15.

"Imp," 9.5-mm., hand driven, projection from mains, 110 volts to 250 volts, or from accumulators, £4 12s. 6d.

#### Zeiss Ikon Ltd.

"Kinnox," 16-mm., all-enclosed, right angled mirror illuminant from external lamp, stills mechanism, 400-ft. capacity.

Model A, with 250-watt lamp, £58 10s. Model B, with 375-watt lamp and forced-draught cooling, £65 17s. 6d.

### SECTION II.—PROJECTION LANTERNS, EPISCOPES AND EPIDIASCOPES.

#### Ensign, Ltd.

"Optiscope No. 6," double-lined metal body, all electric connections housed in base, 4½-in. condenser, leather bellows focussing, 100, 250 or 500 watt illuminant, Aldis Uno projection lens, in case,

without lamp, £7 15s. Aldis-Butcher lens, £2 extra.

"Optiscope 6B," for travellers, all voltages, 100 to 250, Aldis Uno 8-in. or 10-in. lens, with lamp, £8 15s. Aldis-Butcher lens, £2 extra.

"Optiscope No. 9," black ripple enamel and chromium plated, all-metal

double-lined body, all electric connections housed in base, extra long

throw, 4½-in. condenser, leather bellows focussing, 500-watt illuminant, Aldis Uno projection lens, in case, without lamp, £11 10s. Aldis-Butcher lens, £2 extra.

Optiscope, 1,000-watt, any focus Aldis-Butcher lens from 8 to 20 in. fitted as standard. Without lamp, £25; lamp 32s. extra.

"New Junior," enamelled metal body, draw-tube focussing, 60-watt illuminant, 4-in. condenser, 6-in. focus projection lens, in case, without lamp, £2 10s.

"Comet," crystalline enamelled metal body, draw-tube and rack and pinion focussing, 4-in. condenser, Aldis Uno projection lens, in case, 250-watt Monolite, £8 10s.

"Mickey Mouse," for use with ordinary house lighting, in case, £2 17s. 6d.

#### Sands Hunter & Co., Ltd.

"K.W. Episkop," episcopic aperture 3½ × 3½ in., projection from mirror, f/3.2

5.3-in. projection lens, £5 15s. Lamp extra.

#### Zeiss Ikon Ltd.

"Adept" Epidiascope, 250-watt, episcopic aperture 5½ × 5½ in., 12-in. f/4 episcopic and 6-in. diascope lenses, £23 10s. to 110 volts, £25 2s. 6d. to 250 volts. Episcopes only, £19 and £20 12s. 6d.

"Lector" Epidiascope, 500-watt, episcopic aperture 5½ × 5½ in., horizontal projection for slides, forced-draught cooling, 13½-in. f/4 episcopic and 8½-in. diascope lenses, £33 to 110 volts; £45 12s. 6d. to 250 volts.

"Famulus" Epidiascope, 500-watt,

single-movement change from diascope to episcopes. Model A, 14½-in. f/3.7

episcopic and 8-in. diascope lenses, £44 15s. Model B, 20-in. f/4 episcopic and 10-in. diascope lenses, £57 15s. Resistances extra.

### SECTION III.—ACCESSORIES.

**Automatic Coil Winder and Electrical Equipment Co., Ltd.**

"Avo" Universal Photo-electric Exposure Meter\*, calibrated in f/ numbers and H. and D. speeds, 57s. 6d.

**Camera Co.**

Vauxhall de Luxe Carrying-case for Pathéscope "200-B" projector and accessories, 17s. 6d., carriage 1s. 3d.

Also carrying-case for "Imp" projector and accessories, 9s. 6d.

Vauxhall Silver Screen, on rollers, 30 x 40 in., 11s. 6d., carriage 1s. 3d.

Vauxhall Super Reel,\* finest aluminium, 400-ft. capacity, feet indicator. 9.5-mm., 3 reels for 5s. 9d.,

post free; 16-mm., 3 reels for 6s. 9d., post free.

Vauxhall Humidor Cases, 3 for 3s. 6d., post free. Either 9.5-mm. or 16-mm.

**Coronet Camera Co.**

Titling device, 9.5-mm., adjustable lighting, complete excepting for lamps, 21s. Special half-silvered lamps, 2s. 6d. each.

Silver Screen, 40 x 30 in., 15s. 6d.; 30 x 20 in., 7s. 6d.

**J. H. Dallmeyer, Ltd.**

Blendux Photo-electric Exposure Meter, incorporating lens, restricting angle, £4 4s.

Dallmeyer Projection Lenses, ¾-in. to 4 in. ¾-in. for Kodascope Eight-30 costs 42s.

Dallmeyer "Super-Lite" Series, 2 to 4 in., £5 5s.; "Max-Lite," for Victor and Bell & Howell projectors, £6 to £8.

Craig Senior Splicer,\* chromium-plated, £2 12s. 6d.; Junior Model, £1 1s. Special Senior Splicer for sound, £3 3s.

Craig de Luxe Rewinder, geared 4 to 1, 200 to 700 ft. reel capacity, £2 12s. 6d.

**Cinepro Ltd.**

"Cinea" 16-mm. Film Splicing and Mending Outfit,\* £2 10s.

**Drem Products, Ltd.**

Drem Extinction Type Cinemeter,\* includes special scale for use with Kodacolor, 30s. Case extra, 3s.

**Ensign, Ltd.**

Ensign Portable Silver Auto-Screen, 32 x 24 £3 5s., 40 x 30 £3 15s., 50 x 40 £4 15s.

Maxflat Portable Silver Screen, erected by winding crank, 84 x 64 £17 10s.

Ensign Rigid Silver Screen, 18 x 14 12s. 6d., 32 x 24 27s. 6d.

Ensign Electric Torch Pointer, for lecturers; avoids necessity for stick pointer, 15s.

16-mm. Humitin Carrying-case, with 5 humitins (without reels), £2 2s.; or with 10 humitins, £3 3s.

16-mm. Humitin Carrying-bags, to hold 6 humitins, 11s. 6d.; or 10 humitins, 15s.

Ensign "Universal" Film Editor, 16-mm., 9.5-mm. or 8-mm., single, £5 5s. each; dual, £5 10s. each.

Ensign "Universal" Film Splicer, for all sub-standard films, £2 15s.

Ensign "Universal" Film Winder, for 16-mm., 9.5-mm. or 8-mm., 37s. 6d. each model.

**Edwin Gorse.**

"Egofix" Crystal Beaded Screen, rollers, from 27s. 6d.

"Lux" Automatic Screen, leather-covered case, from £4 17s. 6d.

"Egofix" 400-ft. Aluminium Reels, 9.5 or 16 mm., 5 for 10s. 6d.

9.5-mm. Geared Rewinder, 17s. 6d.

**R. F. Hunter Ltd.**

"Celfix" Patent Automatic Screen,\* self-erecting, drum-taut, silver or crystal-glass beaded 27 x 20, S. £3 10s., C.G. £4 10s.; 40 x 30, S. £4 12s. 6d., C.G. £6 10s.; 52 x 40, S. £6, C.G. £8 10s. Obtainable up to 96 x 72 in.

"Super Celfix" Beaded Screens, 9 x 7 ft., £36; 13 x 10 ft., £60.

"Atlanta" Crystal Beaded on rollers, 6 ft. 6 in. x 6 ft. 6 in., £20; 10 ft. x 10 ft., £32.

"Self Recta," automatic opening and closing, silver surface, 27 x 20 in., £2 5s.; 52 x 40, £4.

"Silvette" rigid, silver and crystal glass surfaces: 24 x 18, S. £1 5s., C.G. £2; 32 x 24, S. £1 10s., C.G. £2 12s. 6d.; 40 x 30, S. £2, C.G. £3 10s. Other types of screen from 12s. 6d.

**Illustra Enterprises.**

"Illustrascreens," beaded surface: 26 x 36 £2, 30 x 40 £3 10s., 36 x 48 £4, 40 x 56 £4 10s., 56 x 72 £6, 58 x 84 £7 10s.

"Illustrascreens," silver surface, rollers, battens and framed sides, 40 x 30 20s., 48 x 36 25s., 60 x 48 40s.

"Illustrachrome" Multi-colour Wheel, for dissolving changes with colour blends. Home Movie Model, 5s.; Pathéscope 200-B Model, 6s. For all other projectors, 7s. 6d.

**Kodak Ltd.**

Photoflood Lamp, all standard voltages, 4s.

Kodascope - Eight Silver - surfaced Screen, 30 x 22, 59s. 6d.

**Modern Traders, Ltd.**

"Matélux" Super Actinic Lamp for indoor cinematography, 42s.

**Weston Electrical Instrument Co., Ltd.**

New models of this well-known photo-electric meter will be available in the first week of December. Prices have not yet been announced.

# The Week's Meetings

*Societies will have their meetings announced here if the syllabus is sent to us at the beginning of the session or from time to time.*

## Wednesday, October 30th.

Bethnal Green C.C. "Practical Work."  
Birkenhead P.A. "Lantern-Slide Making." F. W. Hollett and J. A. McAusland.  
Birmingham P.S. (Ciné). "The Value of Music and Electrical Recordings to the Sub-Standard Ciné Film." R. Bassett-Bullock.  
Brighton and Hove C.C. "Some Problems of the Printing Process." J. Ainger Hall.  
Coventry P.C. "Chat on Making an Exhibition Print." S. Bridgen.  
Croydon C.C. "Stereoscopy." D. S. Rose.  
G.E. Mechanics' I.P.S. "Hints and Dodges."  
Handsworth P.S. "Preparing Prints." R. Sanders.  
Harrow C.C. "Night Outing. Meet Charing Cross Tube Station, 8 p.m."  
Ilford P.S. "Photography by Sashalite." A. M. Harker.  
Kodak Works P.S. "Some Ciné Gadgets." A. S. Newman.  
Northallerton and D.P. and C.S. "Bromoil." E. T. Glaister.  
Partick C.C. "Whist Drive."  
S. Suburban and C.P.S. "Flashlight Photography." H. Y. Moysse.  
Worcestershire C.C. "An Hour with a Naturalist." Herbert Thompson.

## Thursday, October 31st.

Accrington C.C. "Hanging Exhibition Prints in the Library."  
Armsley and Wortley P.S. "Gems of Gothic Architecture." J. Crowther Cox.  
Ashton-under-Lyne P.S. "Members' Slides."  
Aston P.S. "Enlarging with a Camera." A. Deverell.  
Bolton C.C. "Still Life by Artificial Light." H. Kitchen.  
Bromley (Kent) C.C. "Further uses of the Photoflood Lamp." J. S. Marriott.  
Bury P.S. "Social Evening."  
Camberwell C.C. "Monthly Competition."  
Cardiff C.C. "The Camera and its Relation to Art." C. I. Britton.  
Coatbridge P.A. "Bromoil I" (Enlarging and Bleaching). R. H. Hobbs.  
Gateshead and D.C.C. "The Construction of a Picture." Burdus Redford.  
Greenock C.C. "Development by Various Tanks."  
Hammersmith H.H.P.S. "Discussion on One-man Show." A. Keith Dannatt.  
Hull P.S. "Secrets of the Newspaper Picture Page." E. W. Watson.  
Isle of Wight C.C. "Small Bromide Enlargements." Dr. H. F. Bassano.  
Keighley and D.P.A. "Chloro-Bromide Printing." H. Bottomley.  
Liverpool A.P.A. "Photography of the Man of Arran." Ciné Film. J. Osborne.  
N. Middlesex P.S. "Mont St. Michel." H. W. Fincham.  
Richmond C.C. "The Romance of some Wayside Flowers." F. Martin Duncan.  
Singer C.C. "In the Dark-room (2). Use of the Enlarger."  
Tadmorden P.S. "A Chat on Making the Exhibition Print." S. Bridgen.  
Tynemouth P.S. "Paintings, Their Lesson." W. Maitland.

Worcestershire C.C. "Leica Photography." G. B. MacAlpine.

## THE NEW SELO 9.5-mm. REVERSAL CINÉ FILM

WE have already referred to this latest introduction of the Ilford Company as embodying several excellent features, and a recent camera test has confirmed that preliminary notice. Although not put forward as being pan-chromatic, the emulsion of this film gives very perfect colour rendering, is fast, and has a remarkably fine grain. It has an anti-friction coating that ensures freedom from scratch, stress and cinch markings, and blue-tinted base has been employed. This gives a better black-and-white effect and has certain anti-halo properties. The base is also singularly strong and flexible, which should give it long life. The Selo Daylight Charger, in which the film is supplied, is of new design and is of a much

stronger metal than previous makes. Treating the film as 20° Sch. an excellent negative—plucky and with a good range of tones—was secured. The processing—which is included in the price of the film—was well done. An improvement has been made in the reel on which the processed film is wound, namely, that one side can be taken off, allowing the whole film to be lifted out for editing and joining up. Another minor improvement which makes for smoothness, is that the edges of the opening on the reel have been rolled over, so avoiding any sharp edge which might scratch the film during projecting. The Selo 9.5-mm. Reversal Ciné Film is supplied in 30-ft. lengths, in chargers, at 5s. 6d.

# Readers' Questions ANSWERED

GENERAL.—All communications for the Editor should be addressed: "The Editor, *The Amateur Photographer and Cinematographer*, Dorset House, Stamford Street, London, S.E.1," and in every case, without exception, must give the name and address of the writer.

CONTRIBUTIONS.—The Editor is glad to consider original, up-to-date manuscripts on photographic subjects. All contributions must be typewritten, or in very legible handwriting on one side of the paper only. Letters or communications arising out of matters already appearing in the paper are not paid for. The Editor disclaims legal responsibility for the safety of matter submitted to him, but he will endeavour to return rejected manuscripts, etc., when a stamped addressed envelope is enclosed. MSS. or prints that are not actually accompanied by a stamped wrapper or envelope can in no case be returned. Reproduction fees for prints are only paid by arrangement beforehand. The sending of a print, without any condition stated, will be taken as permission to reproduce it without fee.

ENQUIRIES AND CRITICISM.—Advice, Criticism and Information are freely given, but the following conditions should be read carefully before applying, as any communication which does not comply with the rules must be ignored.

(1) See "General" above. (2) Every question and every print for criticism must be sent separately through the post, and must be accompanied by a separate stamped addressed envelope. No exception can be made in any case to this rule, except so far as enquiries or prints from Overseas are concerned. (3) Neither enquiries nor prints for criticism must be enclosed with competition prints. (4) On the back of each print sent for criticism, in addition to the name and address of the sender, must be the title (if any), and the criticism coupon from the current issue. (5) Enquiries should be clearly written, on one side of the paper only, and should be specific and not general. Such enquiries as "How can I take interiors?" or "Can you give me some hints on outdoor portraiture?" are too general to be dealt with in this section. (6) All envelopes should be distinctly marked "Query" or "Criticism," as the case may be. (7) Prints are sent for advice or criticism on the distinct understanding that by so doing permission is given for their reproduction without fee. We endeavour to deal promptly with enquiries but cannot undertake to answer by return of post, nor can we give precedence to any enquiry.

A selection of those replies is printed each week, but all questions are answered by post. Enquiries from abroad must contain a coupon also, but it need not be from the current number, and should be cut from the latest issue to reach the enquirer.

## Chemical and Physical Developers.

What is the difference between "physical" development and ordinary development?  
G. E. G. (Aston.)

It is far too deep a subject to deal with adequately in the form of a short reply, but briefly it is this. Ordinary or "chemical" developers which contain metol, hydroquinone, amidol, etc., are really "reducing" agents, and in practice reduce the silver in the sensitive emulsion in proportion to the exposure made. On the other hand, "physical" developers add the silver to the image in a similar proportion to the exposure on the negative. Physical development has the advantage of producing fine grain but is, comparatively, a long process. There are some developers available which are combinations of "chemical" and "physical" developing agents, and these "reduce" the silver first and then add further silver to it.

## Metol Poisoning.

Can you recommend a developer that will not cause inflammation and soreness to the fingers that I have recently experienced with some developers?  
S. T. (London.)

You are evidently suffering from metol poisoning, and you should never touch any solution which contains this chemical. If you wait until your skin is quite sound and healthy we do not think that a good all-round developer like amidol will have any ill effect.

## Labels for Tins.

What is a good adhesive to use for sticking labels on to tins?  
G. E. M. (Manchester.)

A gum such as the following is suitable.

Gum tragacanth .. ½ oz.  
Gum arabic .. 1 oz.  
Water .. 4 oz.

When the labels are dry it is a good plan to paint them over with celluloid varnish, carrying it beyond the edges of the label on to the metal.

## Black Backing for Glass Positive.

I have a very old photograph made on glass and have removed the black coating on the back which had become streaky. Can you recommend me a black paint that would be suitable for re-backing?  
J. R. H. (Chiswick.)

We should say that any dead-black varnish applied to the glass would answer the purpose, assuming that you have not in any way damaged the photographic image. Any good oil and colour merchant would be able to supply you with a suitable medium for painting on to the glass, but you will probably find that two coats will be necessary.

## Bubbles in Lens.

I have recently purchased a camera, the lens of which has many bubbles in both the front and back components. Is this affecting the definition and quality of my negatives?  
M. B. (India.)

Such bubbles as those to which you refer were once much more common than they are now, but, in any case, they only occur in good lenses made of a special kind of glass; they will have no bad effect on the working of the lens, or on the definition and quality of your negatives.

## Lens Discoloration.

I have a lens, the front surface of which is discoloured to purplish blue. Although it has f/4.5 aperture, I have been told that the discoloration has slowed it down to a speed of f/8. Is this so?  
A. J. (Eltham.)

We cannot pass any opinion upon the lens as we do not know to what extent the coloration has appeared. Slight colour of this kind should have no appreciable effect on the exposure, and we fail to see how anybody is able to calculate to what extent it has affected the aperture. To say that it has reduced the working speed from f/4.5 to f/8 is to say that the colour has the same absorption value as a 3× filter, and we should think this most improbable.

## Pyro for Lantern Slides.

Can you give me the formula for a single-solution pyro developer for warm-tone lantern slides?  
C. D. (Harrogate.)

The following gives good results with most plates, the shadows being rich and transparent.

Pyro .. .. 10 grs.  
Potassium bromide .. 10 grs.  
Ammonia (.880) .. 10 min.  
Water .. 10 oz.

It is advisable to use the solution fresh.

## Overseas Competition.

Will you kindly let me know, at your earliest convenience, the closing date for your Overseas Competition for 1935, and the rules governing it?  
S. C. B. (Benares City, India.)

All entries for our Annual Overseas Competition must be received by December 31st, 1935. The awards will consist of silver and bronze plaques, also certificates. No coupons or entry forms are required for this competition, and readers of *The Amateur Photographer* residing in any part of the British Empire, outside the British Isles, are eligible to compete. Prints can be of any size and by any process. They may be either mounted or unmounted, but must not be sent framed. The fact that they are unmounted will not in any way detract from their chances in the competition, or from their careful consideration for awards. Competitors should state on their entries whether they desire them to be submitted to the selecting committee of the Royal Photographic Society's Exhibition or of the London Salon of Photography (in which case any necessary entry fees should be sent), or to the Editor of *Photograms of the Year*. Packets of prints for the Overseas Competition should be addressed to the Editor, *The Amateur Photographer and Cinematographer*, Dorset House, Stamford Street, London, S.E.1, and marked "Overseas Competition" on the outside.

## Reducing for Over-development.

Through incorrect timing in the developing bath I have many negatives which are far too dense for enlarging. Can you suggest a suitable reducing agent and the method of using it? Is the process a "daylight" one?  
E. A. L. (Surrey.)

It is difficult to give complete instructions in a short form, but we would suggest that you try the following.

Each negative will have to be treated individually and watched.

Make up the following stock solution:

Ammonium persulphate .. 1 oz.  
Sodium sulphite .. 96 grs.  
Sulphuric acid .. 48 min.  
Water .. 10 oz.

For use take one part of stock solution and nine parts of water.

Soak the negative. Place it in a clean dish, cover with the reducer, and rock gently and continuously. When the solution becomes milky action has commenced, and the negative must be examined until the action has gone far enough, when it should be placed straight into a 5 per cent solution of sodium sulphite for a few minutes. Then wash and dry. All the different operations can be carried out in daylight or artificial light.

# CONTAX

The Contax has been designed with one end in view—the production of the perfect miniature negative, and can justly be claimed to represent the peak of achievement in modern miniature instruments. The following important features are to be obtained only with the Contax.

- All-metal focal-plane shutter, speeded from  $\frac{1}{2}$  to a real 1/1,000th second.
- Shutter speeds can be altered both before and after setting.
- Long-base patent rotating wedge distance meter, ensuring a focusing accuracy and robustness not equalled by the distance meter on any other miniature camera.
- Choice of 12 Zeiss Contax Lenses, the high qualities of which are acknowledged throughout the world. All lenses are interchangeable, and nine are coupled with the distance meter.
- The back of the Contax is detachable for cleaning, an important point, not only because dust, etc., which collects inside the camera can be removed easily, but also because plates can be used in conjunction with the Contax plate back.

The Contax is fully explained in our three books which will be sent free on request. The Contax can be purchased from most high-class camera dealers on the instalment system. Name of nearest dealer on request.

Each paragraph is charged separately.

**SERIES DISCOUNTS** are allowed to Trade Advertisers as follows on orders for consecutive insertions, provided a contract is placed in advance, and in the absence of fresh instructions the entire "copy" is repeated from the previous issue: 13 consecutive insertions, 5%; 28 consecutive, 10%; 52 consecutive, 15%.

All advertisements inserted in these columns must be strictly prepaid and posted to arrive at the Head Office, Dorset House, Stamford Street, S.E.1, not later than first post **FRIDAY** for the following week's issue, or one day earlier at the Branch Offices, 19, Hertford Street, Coventry; Guildhall Buildings, Navigation Street, Birmingham, 2; 260, Deansgate, Manchester, 3; 26a, Renfield Street, Glasgow, C.2.

Advertisements are inserted, as far as possible, in the order received, and those received too late for one issue, or crowded out, are published in the first following in which there is space. The Proprietors retain the right to refuse or withdraw advertisements at their discretion.

Postal Orders sent in payment for Advertisements should be made payable to **ILIFFE AND SONS LTD.**, and crossed

& Co.

Notes being untraceable if lost in transit, should not be sent as remittances.

The Proprietors are not responsible for clerical or printer's errors, although every care is taken to avoid mistakes.

**BOX NUMBERS.**—For the convenience of advertisers, letters may be addressed to numbers at the office of this paper. When this is desired, the sum of 6d. to defray the cost of registration and to cover postage on replies must be added to the advertisement charges, which must include the words: "Box 000, c/o 'The Amateur Photographer'." Replies should be addressed: "Box 000, c/o 'The Amateur Photographer,' Dorset House, Stamford Street, London, S.E.1," and these letters will be simply forwarded by us to the advertiser. It must be understood that we do not deal with the correspondence in any other way, nor accept any responsibility in connection with the advertisement. Readers who reply to Box No. advertisements are warned against sending remittances through the post except in registered envelopes. In all such cases the use of the "Deposit System" is recommended.

### Special Note

Readers who reply to advertisements and receive no answer to their enquiries are requested to regard the silence as an indication that the goods advertised have already been disposed of. Advertisers often receive so many enquiries that it is quite impossible to reply to each one by post. When sending remittances direct to an advertiser, stamp for return should also be included for use in the event of the application proving unsuccessful.

### Deposit System

Readers who hesitate to send money to advertisers in these columns may deal in perfect safety by availing themselves of our Deposit System. If the money be deposited with "The Amateur Photographer and Cinematographer," both parties are advised of its receipt. The time allowed for decision is three days, counting from receipt of goods, after which period, if buyer decides not to retain goods, they must be returned to sender. If a sale is effected, buyer instructs us to remit amount to seller, but if not, seller instructs us to return amount to depositor. Carriage is paid by the buyer, but in the event of no sale, and subject to there being no different arrangement between buyer and seller, each pays carriage one way. The seller takes the risk of loss or damage in transit, for which we take no responsibility. For all transactions up to £10 a deposit fee of 1/- is charged; on transactions over £10 and under £50 the fee is 2/6; over £50 and under £75, 5/-; over £75 and under £100, 7/6; and on all transactions over £100, one-half per cent. All deposit matters are dealt with at Dorset House, Stamford Street, London, S.E.1, and cheques and money orders should be made payable to Iliffe and Sons Ltd.

## CAMERAS AND LENSES

**ENSIGN** Roll Film Reflex, Aldis f/4.5, and Dallmeyer 9-in. Telephoto to fit, £7/10.—Conway, Brookfield, Preston, Yeovil. [9984]

## WARNING

We have received many complaints from our readers in regard to the business methods of Mr. R. L. Green, trading as R. L. Green's Photographic Exchange, of 218, Fore Street, Edmonton, London, N.18, or (possibly with different initials) as Cine Photo Supplies, 4, Holborn Place, High Holborn, W.C.1.

For some considerable time we have refused to insert his advertisements in "The Amateur Photographer and Cinematographer," and from the complaints we have received it would appear that his practice is to communicate with private advertisers having goods for sale, offering to take such goods in exchange for others, or to purchase for cash. Readers are advised to ignore all such offers from this quarter.

## CAMERAS AND LENSES

## GAUMONT-BRITISH TALKIES— *in your own home!*

After exhaustive experiment the Gaumont-British Picture Corporation have, through their subsidiary Co., G.B.E., perfected the ideal talking picture apparatus. The "GeBescope" 16-mm. Model A Talkie Set is contained in a single attaché case. The loud-speaker is attached to the lid, and can be unhinged and placed anywhere in the drawing-room. Mains operated. Simple to use, and absolutely no danger. The G.B.E. Library supplies a big variety of 16-mm. titles, all of safety, non-inflammable film.

## GeBescope 16-mm. Sound-on-Film TALKIE APPARATUS

## K.W. MASKING FRAME FOR VERTICAL ENLARGERS

The K.W. Masking Frame is suitable for all self-focussing enlargers  
since the paper remains in the position of focus. Notches in the masking  
strips allow of instant setting to the standard sizes of prints, without  
the trouble of adjustment. The solid build and wide bearings of all  
moving parts ensure regular "squareness" of the enlargements.

## LEICA MANUAL

Here is a book which represents the accumulated experiences of 22 specialists and pioneers in Leica photography. No other book has ever attempted to cover the broad scope of miniature camera photography as thoroughly as the LEICA MANUAL.

The Beginning Leica Photographer will find information presented in a style and language readily understandable. Step-by-step procedures and simple directions will lead him to successful results and save him disappointments.

The Advanced and Skilled Leica Photographer will find a wealth of information which will assist him to expedite his work, give him stimulating ideas, new and different viewpoints, ways and means to make his camera pay for new equipment, accessories and gadgets.

The Veteran Leica Photographer will find many new angles and subjects to capture his interest in the LEICA MANUAL. There are specialised chapters on photomicrography, Infra-red, Dental or Insect photography which will open for him new avenues of approach and put a fresh spirit into his hobby, profession or just a pastime.

To One Who Does Not Own a Leica the LEICA MANUAL will be an extremely interesting and timely guide for deciding the important question: "Shall I go in for miniature camera photography?" And even if you do not intend to take up this new and modern form of photography... this volume will give you so many new ideas about photography that you will take your camera and start out with a fresh and different conception of things.

350 Illustrations. 500 Pages.

All the illustrations in the LEICA MANUAL have been selected with great care from thousands of pictures. These pictures illustrate many specific examples of Leica photography. In fact, it is possible to look through this book and study the pictures only and obtain new ideas and methods which can be adapted to your own work. We can assure you that when you obtain your LEICA MANUAL you will agree with us that the illustrations are of the finest quality and represent definite ideas in Leica photography. The photo-montages in this book are worth considerable study in themselves.

# SPECIALLY FOR *Leica* USERS

OUR ORGANIZATION IS EQUIPPED TO SUPPLY  
EVERYTHING YOU NEED FOR  
MINIATURE CAMERA WORK!

We have special Leica facilities, exposures record cards, instruction booklets (copyright), "Leica News and Technique," film posting containers, and other conveniences for registered Leica customers. Get in touch with us. We stock everything for Leica, including all Leica accessories. Send for list or, better still, call and inspect our stock.

REGISTER YOUR LEICA NOW AT WALLACE HEATON'S

## A LEICA USER WRITES:

22/6/35.

"I think it only right to let you know how satisfied I am with your Leica service, which is both prompt and efficient. Nowhere else can I obtain such high-class work."

## THE LEICA MANUAL

The finest book ever published on Leica photography. Nearly twenty authors. 500 pages, 300 illustrations, covering everything connected with Leica photography. 21/-, post 6d. Get yours now.

**PARAPHENYLENE DIAMINE GLYCIN.**—The super fine-grain developer. Tin contains sufficient for 20 oz. Results enlarge almost any size without grain. 1s. 0d.

**FESAGOL.**—A compensating developer for prints and enlargements. Eliminates staining. Good results even from poor negatives, 1/7 and 3/2.

**SUPRAMIN.**—The non-poisonous paraphenylene for fine-grain negatives. Per tin for 36 oz., 1/10.

**TETENAL ULTRAFIN S.F.**—Latest Continental fine-grain developer. Per carton making 600 c.c., 4/-.

**STOP-BATH AND HARDENER.**—New "Wallace Heaton" preparation for use when developing Leica and other films between development and fixing. Eliminates scratching and ensures bright, crisp, clean negatives. Per packet for 20 oz., 3d.

**VISCOSE SPONGES.**—For drying films after development, 1/6, 2/6, 3/6. Very absorbent. No risk of scratching.

EVERYTHING FOR LEICA IN STOCK

## A BARGAIN-BUYER WRITES:

"The camera far exceeds my expectations for such a low price."

As advertisements on these covers go to press a fortnight in advance some of these second-hand items may be sold already, but similar outfits are usually available.

## FREE LISTS

One for each of your Still or Ciné needs, and a special list of our Film Library, the finest in the country. Please enclose 2d. postage.

## EASY TERMS AND EXCHANGES

Anything on 9 monthly instalments. First payment secures the goods. High allowance on your used apparatus in part exchange.

## ZODEL LENS HOOD

It is not only in the summer that the Zodel lens hood is indispensable. In autumn photography, with the sun at a lower altitude and giving many beautiful shadow patterns and against-the-light effects, a lens hood is even more necessary. Zodel lens hood is telescopic and folds flat for carrying. State size of lens when ordering.

Only 7/6

No. 2452.

**START ENLARGING NOW!**

**You can get an ENSIGN  
MAGNAPRINT  
with ENSAR F6.3 Anastigmat  
for 57/6**

This inexpensive Enlarger enables you to commence enlarging—the most fascinating side of photography—with the utmost ease and simplicity. The condenser diffused lighting system employed ensures perfect quality grainless enlargements from miniature negatives.

ENSIGN, Limited, HIGH HOLBORN, LONDON, W.C.1

# The A.B.C of Home Snapshots After Dark

**A.** Put some Kodak Super Sensitive Panchromatic Film into your camera.

**B.** Plug-in a "Photoflood" or two in place of the ordinary electric light bulbs.

**C.** If you want to make the most of the light from your "Photoflood" use a "Kodaflector" Reflector.

**Kodak Super Sensitive Panchromatic Film.** The film of lightning speed; especially sensitive to artificial light. Made in roll film and film pack.

**"Photoflood" Lamp.** Special type of electric bulb that gives powerful, highly-actinic light. New reduced price, **2/6.**

**"Kodaflector" Reflector.** A collapsible, specially-surfaced aluminium reflector that concentrates the light from the "Photoflood" and considerably shortens necessary exposures. It fits on to any electric lamp holder. **3/-**

For details of other Kodak Night Photography Aids, including the "Sashalite," and examples of night-time pictures with explanatory diagrams, ask your Kodak Dealer for free illustrated Night Photography Folder.

*How this picture was made.* Two "Photofloods" in "Kodaflectors" were used. The exposure was  $1/25$ th sec. at  $f5.6$  on Kodak Super Sensitive Panchromatic Film.

## KODAK LIMITED

KODAK HOUSE, KINGSWAY, LONDON, W.C.2

# ENGLAND'S BUYING CENTRE for MINIATURE CAMERAS SPECIALIZATION.

## MINIATURE APPARATUS.

We are the only firm in Great Britain specialising exclusively in miniature apparatus such as the Leica and Contax. Every miniature camera of distinction together with a full range of accessories is to be seen at our showrooms. Where miniature cameras are concerned, we give the highest part-exchange allowances and pay the best cash prices in the trade. Any type of modern high-class apparatus taken in part exchange.

## PROCESSING.

A new approach to the problem of processing is essential if flawless negatives and perfect enlargements are to be produced from miniature negatives. Appreciating this, we have equipped ourselves exclusively to deal with the miniature negative. We pride ourselves that the results fully justify our policy.

VOL. LXXX. No. 2452.

THE numerous competitions we have been called on to judge recently, apart from those associated with this paper, have impressed us with the enormous and unceasing activity of amateur photographers throughout the country. The vast numbers of prints sent in to these competitions are all evidences of the creative factor that renders amateur photography so vital and distinctive when compared with any other hobby. And it must be remembered that such prints represent only a tithe of the total output. There is little doubt that the camera habit has come to stay, and the further growth of interest in the subject will be made apparent to any reader who glances at the page devoted to "The Week's Meetings" appearing elsewhere in this issue. We are glad to know that "The A.P." has played a useful part in helping forward such an important element in modern life.

### Exhibition Films.

The films selected at the recent annual exhibition of the Royal Photographic Society were shown to the keenly critical Cinematograph Group the other evening. They proved to be a very fine lot. There was 250 feet of 16-mm. film by J. B. Stanley, illustrating the life and death—especially the death—of fish in the rivers and pools of India, with unintended pictorial effects in the shadows and ripples on the water surface. There were two films, each of 400 feet, on 16-mm. Kodacolor, by Mr. J. P. Jervis Chapman, for which the Society's medal was awarded. One of them illustrated a trip to Madeira. Then there were two films of scientific subjects, both very suggestive to those in search of ideas for shapes

## TOPICS of the Week

and designs. One of them illustrated the growth of convection currents in a tank of cold water when an electric heater is plunged into it; and the other, almost barbarous in its magnificence, consisted of motion photomicrographs of growing crystals. These last were by the new Kodachrome process, and it was stated that this occasion was the first on which a film by this process had been projected at a formal meeting in this country. The producer was Mr. Loyd Jones, who well deserved the Society's medal which he received.

### Why Colour Photography Tarries?

The Traill Taylor memorial lecture given recently, on the subject of light-sensitive systems, was a highly technical deliverance, though Professor Eggert "got it across" in a language not his own. He stated very succinctly the reason why a final solution of the problem of natural colour reproduction seems so difficult to reach. It all comes back to the question of the human eye, so indulgent in some respects, so rigorous in others. For example, the eye is quite satisfied with a reasonable reproduction of the external world in monochrome. It allows, within generous limits, the tones of the picture to represent the visual brightness of the various colours seen. It does not insist upon absolute accuracy—what accuracy can there be when you are representing colours by tones? Therefore a good monochrome rendering can be relatively easily attained by a panchromatic emulsion and a suitable filter. On the other hand, the eye sets a very high standard on colour reproduction, and a very small deviation from

A SNAPSHOT OF THE "FIFTH."

correct colour rendering in either an additive or subtractive process is obvious to the eye. It is this fact which complicates and makes so difficult the whole question of colour photography.

### Thrillers.

Those who read the modern detective story must have noticed the frequency with which the camera now appears in the detective's kit. We do not recall any adventures of Sherlock Holmes which involved resort to a photographic method, though there may well have been such, but the modern amateur is hot on to it with the camera every time. When he goes out it is with the malacca with the foot rule marked on it, the innocent monocle which is really a powerful magnifier,

the fingerprint powder in his right-hand coat pocket, and the camera. The miniature camera ought to be a godsend to future writers, but as yet it seems scarcely to have got into detective fiction. The idea is rather to parade the photographic equipment and to pretend that the detective is someone else, with dark slides in one pocket, a few odd lenses in another, and the inevitable stains on his thumb and forefinger. A most engrossing work of this kind kept us engaged the other day during the whole journey to Scotland, and here the detective's butler was the photographer, and was shown developing plates in the dark-room in which was a telephone extension by which he might learn when it was time to leave these intriguing operations and attend to his master's

dress tie. It was a most ingenious story, and we never discovered the murderer until the last page, but it was not easy to see how the photographic business helped the discovery. Perhaps it was put on only to heighten the mystery.

### Quieter Colourings.

A new recruit to colour photography remarked recently that one of the delights which it had brought him was the discovery of how large an amount of colour there was in landscape which he would ordinarily have taken to be colourless. There is, of course, a tendency for the colour worker to try out his plate or film on violent colours, but it is the subtler colours which reveal the possibilities of the process and his skill in the management of it.

## "The Amateur Photographer" EXPOSURE TABLE—November

EVERY MONTH a brief exposure table will be provided for the assistance of our readers in their practical work. A glance at the current approximate exposures as here given will serve as a reliable guide for most purposes. The subjects will be varied to suit the time of year. The following exposures will serve as a working guide for any fine day during the month, between the hours of 10 in the morning and 2 in the afternoon, with the sun shining, but not necessarily on the subject. Stop used, f/8. The exposure should be doubled if the sun is obscured or if stop f/11 is used. For f/16 give four times the exposure. For f/5.6 give half. From 8 to 10 a.m. or from 2 to 4 p.m., double these exposures. From 7 to 8 a.m. or from 4 to 5 p.m., treble them.

SUBJECT.	Ordinary.	Medium.	Rapid.	Extra Rapid.	Ultra Rapid.
Open seascapes and cloud studies .. ..	1/20 sec.	1/30 sec.	1/60 sec.	1/80 sec.	1/100 sec.
Open landscapes with no very heavy shadows in foreground, shipping studies or seascapes with rocks, beach scenes ..	1/10 ,,	1/15 ,,	1/30 ,,	1/40 ,,	1/50 ,,
Ordinary landscapes with not too much foliage, open river scenery, figure studies in the open, light buildings, wet street scenes	1/4 ,,	1/6 ,,	1/12 ,,	1/15 ,,	1/20 ,,
Landscapes in fog or mist, or with strong foreground, well-lighted street scenes ..	1/3 ,,	1/4 ,,	1/10 ,,	1/12 ,,	1/15 ,,
Buildings or trees occupying greater portion of pictures .. .. .	3/4 ,,	1/2 ,,	1/4 ,,	1/5 ,,	1/6 ,,
Portraits or groups taken out of doors, not too much shut in by buildings .. ..	2 secs.	1½ ,,	1 ,,	1/2 ,,	1/3 ,,
Portraits in well-lighted room, light surroundings, big window, white reflector ..	6 ,,	5 secs.	3 secs.	2 secs.	1½ ,,

As a further guide we append a list of some of the best-known makes of plates and films on the market. They have been divided into groups, which approximately indicate the speeds referred to above. The hypersensitive panchromatic plates and films require less exposure than the ultra-rapid.

# "Silver-plating"

## THIN NEGATIVES

By  
ARTHUR PAGE.

A further note on the physical intensification of negatives of weak density to produce good printing results without graininess.

IN a recent number of *The Amateur Photographer*, a short description was given of the Odell process for obtaining fine-grain negatives by physical development, and the similarity of the process to silver-plating was pointed out.

Space did not permit the inclusion of the inventor's formula for the intensification of negatives which had been physically developed. It is proposed now to remedy that omission, and to show also what a very safe and powerful method of intensification is provided thereby for negatives which have been developed by the ordinary methods of chemical development.

It will be recalled that a stock solution was prepared which contained the following ingredients:

Hypo .. ..	3½ oz.
Sodium sulphite (anhy.) .. ..	1¼ oz.
Silver nitrate (crys.) ..	150 grs.
Water to make ..	20 oz.

This solution has to be prepared very carefully. The hypo and sulphite are dissolved in 12 oz. of water. The silver nitrate is dissolved in the other 8 oz. of water. The silver solution is then added very slowly to the solution of hypo and sulphite, the mixture being stirred vigorously with a glass rod the whole time.

The mixing is best carried out in subdued daylight, and the combining of the two solutions done so slowly that the precipitate which forms is immediately dissolved on stirring. It is best, too, to use distilled water in the stock solution.

### The Working Solution.

For intensification purposes one ounce of the stock solution is diluted with an equal quantity of water and to this is added 2 drams of a 10 per cent solution of strong liquor ammonia. In another half-ounce of water 10 grains of glycine or metol are dissolved and then added to the ammoniacal silver-

hypo solution. Amidol may be used in place of the glycine or metol, but the ammonia should be reduced to 10 or 15 drops if it is used.

The negative, after being washed for another hour, if possible, is then placed in this solution. Every ten or fifteen minutes it should be removed and wiped over with cotton-wool before replacing. In 30 to 45 minutes intensification should be sufficient to make the negative printable.

### Experiments and Results.

These instructions as given originally by Dr. Odell for intensification of physically developed negatives were tried out by me on old thin negatives which had been developed by ordinary methods. Experiments were first conducted with a useless negative, after covering one half of it with rubber solution to protect it from any action. The difference between the intensified and untouched portions was very great. The next essay was upon a very thin negative more than twelve years old. The results were equally good, but the fact must be emphasised that no method of intensification, however perfect or however powerful, will put into deep shadows details not in the original negative.

### Cleanliness Essential.

In the description of physical development great stress was laid on the importance of cleanliness of all dishes and other utensils used. This is equally necessary for physical intensification, and applies also to the negative itself.

The negatives should always be given a thorough polishing up with clean methylated spirit on a piece of soft chamois leather before they are wetted at all. In spite of this some horny old negatives during the intensification acquired a bright thick metallic edging which led me to think that the plates had been damaged. However, a quick bath

in a moderately strong Farmer's reducer cleared all this away completely and at the same time brightened up the negatives.

There are two classes of persons to whom this method of intensification should appeal. There are those who have negatives which are thin and lacking in good printing value on account of the original materials not having been as fresh as they might have been. Every worker in the Tropics and out-of-the-way parts of the world has this trouble at some time or other.

Then there are those with a stock of negatives developed on the thin side for bromide enlarging with a condenser enlarger who would like to make some of them suitable for chloro-bromide printing, which demands a negative of greater contrast to derive the fullest benefit of the long scale of tones possible with this paper.

To all such who are afraid of submitting their precious negatives to the usual methods of intensification I can confidently recommend the silver-plating process and can promise a fresh interest in many an old negative long since put aside and half-forgotten.

### Absence of Grain.

It is a commonplace nowadays that there is a paper to suit every kind of negative, and it is true that bright pictures can be produced from the thinnest of negatives by the use of an extra-contrasty hard paper. But there are limitations. With a very slight amount of enlargement graininess begins to appear whilst the smallest marks on a thin film are bound to show up too much.

Physical intensification has a marked effect in closing up the pores, so to speak, and curing graininess, whilst a poor negative acquires a printing value which enables good results to be obtained on normal grades of paper.

# Mirror Portraits

By E. B. WATTON.

ALTHOUGH the idea described below may not be new, it will prove of interest to those who are always seeking something out of the ordinary in portraiture, and are not merely content with the conventional "head and shoulders" against a (more or less) suitable background.

Briefly the device consists in posing a model before a mirror and photographing the reflection as well as the model.

The idea sounds absurdly simple, but there are one or two points which require careful consideration if satisfactory results are to be obtained without many early failures.

In the first place the arrangement of both model and mirror require careful thought to secure a pleasing composition, and the accompanying diagram, illustrating a typical arrangement which may be found suitable for early experiments, indicates the relative positions of model, mirror and camera, together with the auxiliary background, this latter being a most important feature.

In a spacious studio with perfectly plain walls, it could perhaps be dispensed with, but for work in a crowded room with other furniture, it is a very valuable aid in suppressing

*The New Hat.*

model and the reflection equally sharp, a much smaller stop in the lens will be necessary than is commonly used for portrait work.

Personally, I use a  $5\frac{3}{4}$ -in. lens on a  $3\frac{1}{2} \times 2\frac{1}{2}$  T.-P. reflex, and for normal work at 8 to 9 ft. (maximum obtainable owing to space limitations) the depth of focus at  $f/4.5$  is only a few inches, entirely insufficient to extend from the back of the model's head to the reflection.

The possibility of rendering the mirror image slightly out of focus is, however, frequently a definite advantage, as by its aid a pleasing study may be obtained of a person who is

normally a difficult subject for direct portraiture in the ordinary way.

"The New Hat" is an example of deliberate soft focus and was taken according to the diagram, the lighting being one flood-light at 5 ft. (700 watts, with diffuser), and a little top light.

This is, of course, just one example of the mirror treatment and I do not claim to have made an exhaustive study of the subject. It is hoped, however, that these few notes may prove of service in establishing a "jumping-off point" for others who may be interested enough to experiment on similar lines.

## WARM TONES ON BROMIDE PAPER BY DIRECT DEVELOPMENT

BY the use of a hydroquinone-glycin-borax developer rich warm-black tones can be obtained on most well-known brands of bromide paper. A full exposure is necessary, and development should be continued longer than the normal time for black tones. The formula, which is due to T. Lee Symes, is as follows:

A. Hydroquinone..	.. 200 grs.
Glycin ..	.. 80 grs.
Potassium bromide ..	.. 80 grs.
Soda sulphite (crys.) ..	.. 4 oz.
Water ..	.. 20 oz.
B. Soda carbonate (crys.) ..	.. 4 oz.
Borax ..	.. $\frac{1}{2}$ oz.
Water ..	.. 20 oz.

For use take equal parts of A and B, and add equal quantity of water. Use at 65 degrees Fahr.

undesirable reflections. (In the writer's case, black cloth was used for both main and auxiliary backgrounds, but this is only one of many suitable materials.)

Furthermore, it must be remembered that if it is desired to render both the

# A £2,500 Rolleiflex PICTURE

... THIS IS WHAT Mr. JENKINS, WHO WON THE "DAILY HERALD" £2,500 PRIZE, HAS TO SAY ABOUT THE ROLLEIFLEX

"I naturally think the Rolleiflex is a wonderful camera. Its chief advantage to my mind is that you can see your picture right way up all the time and in actual size. I've found this a great help in getting good composition. The quick focussing and clever placing of the controls are a wonderful asset in getting quick, unusual shots."

(Signed) R. Jenkins.

Mr. Jenkins using his Rolleiflex.

Reproduced by courtesy of the "Daily Herald."

Rolleiflex takes 12 exposures on  $3\frac{1}{4} \times 2\frac{1}{4}$  8-exp. roll film for 1/-. The square format proves an advantage for enlarging or trimming your print to any desired shape. Rolleiflex is the fastest roll - film mirror reflex in the world. It is fitted with one lever Compur shutter speeded to 1/500th sec., T. & B., and the lens is Zeiss Tessar f/3.5. It is designed to take plate back and numerous accessories which make it extremely versatile. Price £22 10 0.

## GIVE YOUR ENLARGEMENTS A NEW BEAUTY

Complete with screens and masks £2:2:0

The S.H. Gravure Enlarging Frame will give your photographs a unique distinctiveness so that they will cease to be "just photos." Unlike all the methods which have been evolved in the past in an attempt to attain this objective, the S.H. Gravure Enlarging

Frame does not necessitate the use of special paper, manipulative skill or the carrying out of tedious chemical processes, but it enables a variety of novel and extremely beautiful effects to be easily produced on ANY enlarging paper and with ANY vertical enlarger.

By means of the special textured translucent screens—which are non-inflammable—photographs can be made to have the appearance of being beautifully etched, or given lovely "linen" or "tapestry" effects to make them definitely "out of the ordinary."

# LANTERN SLIDES by the CARBON PROCESS

By  
P. E. ABRAHAM.

IT is fairly well known that the carbon process is pre-eminently capable of reproducing prints in which it is desired to retain a long scale of gradations. That this quality can be utilised in the production of lantern slides in a variety of colours does not seem to be so widely appreciated. It is hoped, therefore, that the following description of the work involved will be of interest to those who seek something as a change from ordinary methods.

The best kind of negative for the purpose is one that will give a good print on soft gaslight paper; the sort that has been obtained by full exposure followed by full development. A welcome use, however, may be found for many negatives which on account of their strength have been rejected for enlarging, or condemned to the reduction bath, as the process has a tendency to flatten contrasts.

## The Pigmented Paper.

A supply of pigmented paper can be purchased from the Autotype Co. (59, New Oxford Street, W.C.1), who are always ready to advise upon any difficulties which may be experienced.

With regard to colours, the writer finds sea-green, grey-green, brown-black, inkpot and sepia good to work with. The dark-blue pigment paper should be eschewed in first attempts as it seems to have a tendency to "frilling" in development. This appears to be due to printing action penetrating to the backing-paper owing to the pigment's transparency to actinic light, and causing tension in the stripping operation mentioned later. It is suggested that the use of this colour be confined to cloud studies requiring light printing. The brown pigments appear to give warmer tones on glass than they do in paper prints.

## Sensitising.

The paper is best purchased in an insensitive condition, for when sensitised its keeping qualities are somewhat uncertain, and it generally does not keep in good printing order longer than a fortnight. It is, however, a very easy matter to sensitise.

The sensitising agent is pure bichromate of potash, and a five per cent stock solution of this salt should be prepared.

For use, the bichromate stock solution is further diluted to form a solution of one and a quarter per cent strength, e.g., to 2 oz. of stock add 6 of water.

The pigment paper is immersed face downwards in the solution, which should not be of a temperature higher than 65 degrees Fahr. All air-bubbles having been removed from the back, the paper

is reversed and the pigment side similarly treated. The length of immersion should be two minutes.

The pigment paper is then placed face downwards on a clean sheet of glass and squeegeed with a flat squeegee to remove surplus solution, and then hung up in a dark, well-ventilated room to dry. Drying should not be allowed to take longer than three hours, as long drying may affect the subsequent solubility of the pigmented gelatine. It may be dried in yellow artificial light, but heat must not be used in any case.

## The Glass Final Support.

The  $3\frac{1}{4} \times 3\frac{1}{4}$  glasses which are to receive the carbon image may be purchased from the makers of the pigment paper, and are already prepared with a thin coating of insoluble gelatine. Ordinary clean lantern cover-glasses may, however, be coated with a layer of insoluble gelatine by the method advocated in the handbook to the Autotype process.

Scrupulously cleaned, discarded lantern plates or cut-down quarter-plate negatives may be pressed into service, if the worker undertakes this venture, but for the best results it is wiser and cheaper to obtain the prepared variety, as they are completely free from flaws or dust specks, a condition not easily effected in the home-made product.

## Exposure.

The most militant difficulty to contend with is the question of exposure, no visible image being produced at the time of printing, which is carried out in daylight but not direct sunlight. Some form of actinometer is almost a necessity, the method here being to print for a number of "tints," i.e., the number of times the exposed silver paper in the aperture of the actinometer darkens to the colour of a standard comparison tint.

Another method which the writer has proved successful, is to conduct a trial exposure by uncovering the print in five-minute periods with a piece of card. After subsequent development the time taken by the correctly exposed portion is noted against the factor given in the Burroughs Wellcome exposure calculator for the month and the light. The exposure required for any other time can then be calculated by comparison of the light factors consulted. About half the normal exposure is recommended for the blue pigment paper owing to its greater penetration by actinic light.

Yet another method is to use a piece of ordinary P.O.P. or self-toning paper in a printing frame under a negative of similar density. The speed of this paper is approximately the same as the sensitised carbon tissue, and the exposure

can be readily judged in this manner after a few trials.

Steps having been taken to ensure some guide to printing as outlined above, subsequent operations are delightfully simple. The sensitised paper, cut to the correct lantern size, is placed in the printing frame, pigment side in contact with the negative. A mask is a necessity to provide a "safe edge" against frilling, and to leave a clear unprinted edge in the positive.

## Developing.

After the estimated time of printing has elapsed, the sensitised pigment paper is placed in a dish of cold water, when it commences to curl inwards. When it has almost uncurled again bring it into contact with the prepared glass under water, and, using a piece of rubberised cloth as a protection from abrasion, squeegee into contact and leave for twenty minutes. Perfect contact between pigment paper and glass should be ensured, as any airbells will be a source of future trouble.

At the end of the time stated place the slide into warm water at a temperature of 100 degrees Fahr. When the pigment is seen to ooze from the edges of the paper, strip the latter from its glass support and throw aside.

Holding the slide in the left hand lave it with hot water from the right hand until the soluble gelatine which has been unacted upon by the light dissolves away, leaving the transparency in the form of insoluble pigmented gelatine.

The temperature of the water may be increased gradually to a heat as high as the hand can bear to secure more contrast if necessary; in fact, at this stage some measure of control is possible.

## Finishing the Slide.

Development should be complete in about five minutes, and the slide is then gently rinsed in cold water, and finally transferred to a five per cent alum solution for a few minutes to harden. The slide is removed from the alum and again rinsed gently in cold water.

It is then allowed to dry naturally in a dust-free room. Considerable relief will be apparent in the wet image, but this will almost disappear on drying and will not affect projection. The dry transparency is masked, bound up with a cover-glass and spotted like an ordinary slide.

In concluding, it must be stressed that dust should be carefully avoided at all stages in the process, and that particles of grit in solutions should be guarded against. The beautiful transparency of the slides and the fascination of the colours obtainable will be a revelation to even the hardened slide-maker.

November 6th, 1935

# November

By M. W. BRAMPTON.

*Hill-top. Late autumn ploughing affords many fine subjects for the outdoor photographer.*

**T**HOSE days when autumn verges on the edge of winter offer many opportunities for picture-making. In sheltered districts the autumn tints last well into November, which is not always the foggy month it is supposed to be.

Sometimes there are days of beautiful soft sunshine, and the fact that there is generally a lot of moisture about results in those atmospheric effects which are so typical of the season.

We all know the kind of day when there is a cold tang in the air and a pungent scent from the damp leaves which lie under hedges or drift along the edge of pavements where many of them have been trodden underfoot. When the sun shines on these days it is well to take full advantage of it, for the autumnal atmosphere will soon disappear and the bright days which come later will be crisp winter days of quite a different character.

Bright winter days are just as good for photography, but it is a pity to let any season go by without securing some records of it.

Seasonal effect is the thing to aim for when taking photographs in late autumn, and a wide variety of subject matter can be used for pictures which plainly represent autumn and no other time of year.

Mist will play a large part in these effects. It often makes quite commonplace scenes, particularly buildings, look interesting and slightly mysterious, and enables one to secure photographs which have cold masses of tone instead of intricate and spotty detail, which present such a difficulty to the photographer who aims at something more pictorial than the average record.

Often the best effects are to be had

*A wind tossed tree.*

*Clearing autumn leaves.*

typical of autumn, strong filters should not be used.

If the mist is thick, or in sunlight, a weak filter will cut out a little of it, and may give a softer and more pleasing result. It is interesting to expose several films on one subject, using no filter for one and filters of varying strengths for others, and compare the results.

Wind is an aspect of autumn which is somewhat neglected. It is difficult to take photographs in a strong wind which causes violent movement in everything movable, but effects of windswept trees can sometimes be secured when there is not actually a

# Subjects Out of doors

strong wind blowing. In exposed places most trees have a decided list to one side, all the branches growing in one direction, showing which way the prevailing wind blows, and photographs of these bent trees give a good impression of the blustery days which are interspersed with the misty ones of late autumn. It is best to photograph the trees after the leaves have fallen, as foliage suggests more summery conditions.

The light loses its strength rapidly

*The value of autumn mists to give broad effects is seen here.*

in autumn, so exposures have to be correspondingly longer. Even when the sunlight looks bright it is much more yellow in tone and lacking in actinic value than the light of a few months ago, and contrasts are not as strong. Negatives must therefore be amply exposed and fully developed if the resulting prints are to be of rich quality.

With the very fast films now on the market, particularly the panchromatic varieties with their extra sensitivity to yellow, snapshot exposures are generally quite satisfactory as long as there are no deep shadows near the camera.

*An autumn morning.*

As to the type of paper which gives the best rendering of autumn scenes, opinions differ as to the relative merits of cream- and white-based paper. Personally, I think that for subjects where the soft glow of sun is the main feature a cream base is best, but for misty scenes a white or pale ivory base is to be preferred. A greater delicacy is given to the mist and a better impression of the cool atmosphere of late autumn conveyed. A cream paper is apt to make mist look dirty, more like fog through which the sun tries to penetrate.

Autumn colouring and atmosphere provide some of the best possible subjects for the available colour plates and films, and the opportunities so afforded should on no account be overlooked by those who can take advantage of them.

*Late autumn in a country road.*

# NEWS AND REVIEWS

ITEMS OF GENERAL INTEREST FROM ALL QUARTERS.

The Secretary of The Royal Photographic Society informs us that in consequence of the dissolution of Parliament Colonel J. T. C. Moore-Brabazon, M.P., will be unable to open the forthcoming Exhibition of Cinematography at the Society's House. The Exhibition will be opened by Mr. A. C. Cameron, Secretary to the Central Council for School Broadcasting and a Governor of The British Film Institute, on Saturday afternoon, 9th November, at 3 p.m. Tickets for the ceremony can be obtained on application at 35, Russell Square, W.C.

A fine exhibition of Alpine photographs by Mr. J. Hubert Walker was opened recently by Dr. N. Dudley Stamp, at the Ilford Galleries, 101, High Holborn, London. Readers who are interested in Alpine scenery are strongly recommended to pay it a visit. Admission is free.

A new club has been formed in Brighouse to be known as the Brighouse Camera Club. A fully-equipped club-room has been opened at Water Street. The annual subscription is 5s. Interested amateurs should get in touch with the Hon. Sec., W. Shillitoe, 46, Bridge End, Brighouse, Yorks.

Readers who have regularly received the little monthly publication issued by E. Leitz—"Leica News"—will be glad to know that the firm can supply a special binder made of strong material and covered with washable Rexine. The price is 2s. 6d. Application should be made to E. Leitz, 20, Mortimer Street, W.1.

Erdington, a fast-growing suburb of Birmingham, must have within its borders many amateurs who desire to join a "live" photographic society. The Erdington Society has vacancies for new members. A fully-equipped

dark-room is now provided for the free use of members. Juniors (subscription 10s.) are particularly welcomed. A programme and particulars will be sent on receipt of a postcard addressed to the Hon. Secretary, H. A. C. Chamberlin, 36, Grange Road, Erdington, Birmingham.

Many of our readers who entered the Rolleiflex and Rolleicord competition organised during the past year by the makers of these popular cameras, Messrs. Franke and Heidecke, of Brunswick, will be interested to learn that 35,000 pictures were entered, and the names of the 400 prizewinners will be available shortly. We understand that the D. Heering Publishing Co. will issue a book in which the winning prints will be reproduced.

Amongst the list of ciné societies published in our last week's issue we regret to find that the Ilford Amateur Ciné Society was omitted. The Club room is at the Gatehouse Café, Cranbrook Road, Ilford, where meetings are held on the first Thursday of each month. Hon. Secretary, A. D. Taylor, 9, Middleton Gardens, Ilford, Essex.

Ciné enthusiasts will be interested in the new "Argus" 9.5-mm. ciné camera which has just been introduced by The Camera Co., 320, Vauxhall Bridge Road, London, S.W.1. It is an attractive-looking and well-made instrument, easy to hold and operate. It has a three-lens turret fitted with Ross lenses throughout, a 1-in. f/1.9 lens as standard with micrometer focussing mount, and a 4-in. Teleros and 6-in. lens as extras. The "Argus" has a 100-ft. capacity, and among the many novel features are a 3-in. diameter sector shutter, a spring load indicator, a forward and reverse motor and a pre-selector giving the option of single shots, "time" and the usual "brief"

shutter releases. Four shutter speeds of 12, 16, 32 and 64 frames a second are fitted, and the footage indicator which runs to 100 ft. is conveniently placed under the view-finder. It is remarkably

compact, extremely strong and well finished and retails at 32 guineas, including a de luxe leather carrying-case. Readers should apply to the above address for further particulars.

The Southport Photographic Society has recently equipped a dark room at its headquarters, St. John Hall, Scarisbrick Street, Southport. This is available for members at all hours. Any amateur photographer in the neighbourhood who is not already a member should apply to the Hon. Secretary, Mr. J. H. Moorhouse, 22, Queen's Road, Southport, for all information. He will be sure of a personal welcome.

"Celfix" Ciné Screens have become well established among amateur ciné workers and projectionists, who want the best results from their films or slides. A new price list of these screens has just been issued by the makers, R. F. Hunter Ltd., "Celfix House," 51, Gray's Inn Road, London, W.C.1. It is most convincingly illustrated, and well worth applying for. It will be sent free to any reader of "The A.P." and sample pieces of "Celfix" crystal glass beaded and "Celfix" silver material—as used in the construction of the screens—will be sent at the same time.

## Exhibitions and Competitions

CURRENT AND FUTURE.

Notices of forthcoming exhibitions and competitions will be included here every week if particulars are sent by the responsible organisers.

The Amateur Photographer Monthly Competitions for Beginners, Intermediate and Advanced Workers.—Entries, November 30. Rules in issue of October 30. Irish Salon (to be held at Mansion House, Dublin).—Open, November 2-9. Particulars from Hon. Secretary, Irish Salon of Photography, 18, Morehampton Road, Dublin.

Seventh Western International Photographic Salon.—November 23-30. Organising Secretary, W. H. Hill-Muchamore, 24, Church Road, Redfield, Bristol.

Cape of Good Hope International Salon (under the auspices of Cape Town P.S.).—Entries due, November 19; open, January, 1936. Hon. Salon Secretary, Richard Dekenah, P.O. Box 2431, Cape Town, South Africa.

IXe International Kertsalon Fotografische Kring "Iris".—Open, December 22-January 5, 1936. Entries close, November 15. Particulars and entry forms from J. Van Dyck, Secretary, "Iris," 69, Ballaerstraat, Antwerp.

Third (Second International) Wilmington Salon of Photography.—Open, January 6-26, 1936. Last day for entries, December 15, 1935. Particulars and entry

forms from the Salon Committee, Delaware Camera Club, P.O. Box 818, Wilmington, Delaware, U.S.A.

Leicester P.S. International Exhibition.—Entries, January 24, 1936; open, February 24-March 7, 1936. Exhibition Secretary, H. Foscutt, 19, Doncaster Road, Leicester.

Preston Scientific Society.—Eleventh Annual Open Photographic Exhibition. Monday, February 3 to Saturday, February 15, 1936. Entries close Friday, January 10, 1936. Particulars and entry forms from the Exhibition Secretary, F. Wells, 65, Powis Road, Ashton, Preston, Lancs.

The 40th Annual Exhibition of the South London P.S.—Open, February 15-March 14, 1936. Entries close, January 21. Further details and entry forms from Hon. Exhibition Secretary, H. S. Adams, 40, Stockwell Park Road, London, S.W.9.

Scottish National Salon.—February 8-29, 1936. Entries close, January 11. Particulars and entry forms from the Hon. Salon Secretary, Norman G. Brown, 36, North Lindsay Street, Dundee.

Ilford Photographic Society.—Annual Photographic Exhibition. From Monday, March 2 to Saturday,

March 7, 1936. Closing date for entries, Saturday, February 1, 1936. Particulars and entry forms from E. G. Roughton, 63, Havering Road, Romford, Essex.

City of London and Cripplegate Photographic Society.—Thirty-first Annual Photographic Exhibition from March 16-21, 1936. Entries close, February 10, 1936. Particulars and entry forms from the Hon. Exhibition Secretary, A. C. Mundy, 11, Monkham Lane, Woodford Green, Essex.

Ville Salon International D'Art Photographique de Bruxelles, 1936.—Open, from March 21-April 5, 1936. Entries close, February 25. Particulars and entry forms from M. M. Devaivre, 152, Rue Markelbach, at Brussels 3, Belgium.

Darwen Exhibition of Photography.—April 20-May 2, 1936. Entries close, March 19. Particulars and entry forms from the Secretary, J. H. Woods, South Down, Bolton Road, Darwen.

Bristol Photographic Society.—Second Annual Open Exhibition, from May 2-19, 1936. Entries close, March 28. Particulars and entry forms from the Hon. Exhibition Secretary, Percy V. Cave, 36, Coldharbour Road, Redland, Bristol, 6.

# how I make my EXHIBITION PICTURES

Methods and Ideals of well-known Pictorial Workers.

No. CCCVI.

Mr. DONALD  
S. HERBERT.

From information communicated to our Special Representative.

"FACES and moods are the foundation of my photographic pictures. All kinds of faces interest me deeply. There are children, whose moods and expressions are a constant source of supply for attractive pictures; and there are the sweet young maids in their 'teens, just blossoming into womanhood, who are perhaps my favourite subjects.

"Then, again, there are the sophisticated ladies, who are full of character, with their make-up and cool, calculating glances; and if they can be successfully photographed they nearly always make pictures of strong and lasting interest. Finally there come those whose faces have become mellowed by age. People in the autumn of their life have ever been favourite subjects for the greatest figure painters, and I also find great

pleasure in my efforts to create pictures of old people.

"I am always on the look-out for the characteristic or typical face or figure, or one that expresses a mood; and having found a suitable subject it requires a great amount of tact and persuasion to get the models to the studio and explain exactly what is wanted of them. Having found and captured a good model I consider my picture half made.

"All my photographs are taken in a studio—quite a small one, by the way—and I always use half-watt lighting. The arrangement and manipulation of this is quite simple, although I have introduced one or two gadgets of my own invention.

"Every subject, I maintain, must be treated differently; and I rely on 'inspiration' for the particular

treatment of any given subject. I have at times a leaning towards the unusual, and work in a modernistic style; but at other times, especially when photographing old people, I find that there is nothing better than to use conventional methods.

"Now a word or two as to my camera and materials. I use mostly half-plate size in a studio stand camera with a variety of lenses, my favourite being a Dallmeyer f/3.5 of 19-in. focus. For some children and animal studies I prefer a quarter-plate Thornton-Pickard reflex camera with f/3.5 lens.

"For the half-plate size I work with portrait panchromatic flat films, which I find very suitable; and in the reflex I use Ilford hypersensitive very successfully. I use a tank developer, metol-hydroquinone-pyro, and adopt the time-and-temperature method.

"For my prints I use chloro-bromide paper, chiefly Kodopal P, which, with the right development, can give beautiful warm tones. Just of late I have made some very successful prints on Gevaluxe, and this seems to suit my class of negative very well. I retouch my negatives, and finish my prints, but I do not believe in over-doing either of these processes.

"In mounting my exhibition prints, which are usually 12×10 in., I make a cut-out mount 20×16 in. outside, from a light-weight mounting-board of a light cream tint. The print is placed in position at the back of the mount, and fastened with gummed paper tape. A pencil line round the cut-out completes the picture. For exhibitions abroad I always send prints unmounted.

"I am secretary of the Weymouth and District P.S., and my advice to all who wish to improve their photography is to join the local photographic club; and if one does not exist, to set about starting one."

(A further example of Mr. Herbert's work is reproduced on one of the centre Art pages.)

HANDS.

Donald S. Herbert.

# Pictorial Analysis

Every week the picture reproduced on the art page opposite will be analysed in detail for the benefit of readers of the paper who are seeking to improve their pictorial work.

"SUNSHINE ON THE STAIRWAY," by T. G. Corkill.

THE choice of material for this picture is interesting as it conveys the impression of arising from one of those things which, being seen every day, have become familiar, but which, under the transforming influence of a casual effect of sunshine, is suddenly found to possess all the qualities needed for forming a picture, the perception of the fact becoming its inspiration.

Whether this impression be the case or not, it is undeniable that the print provides an admirable example of the beauty conferred upon the most commonplace of material by sunlight, for, in its absence, the subject would have no point and little interest. There might, perhaps, be something in the nature of a pattern arising from the curves and formation of the stairway, but its artistic attraction would be slight, and nothing in comparison with that exerted by the present rendering.

That splash of sunshine makes the picture. Not only does it afford an effective centre of interest and the basis upon which the composition is constructed, but it also provides the æsthetic motive. As the brightest light, it naturally attracts the attention and, as a manifestation of sunshine, it becomes the theme or motive of the picture. The fact that the two factors are coincident renders them mutually helpful, and, in addition to the attraction so excited, the importance of the light in question is emphasised by its force of placing. Its centre (1) occupies a position closely approximating to one of the points formed by intersections of divisions of thirds, from which it derives a not inconsiderable measure of strength, and this is again stressed, in the first place by a suggestion of a spiral formation—arising from the lines formed by the edges of the shadows, the level of the balustrading, the uprising curve of the stairway, and the line of the ceiling; roughly indi-

cated in the sketch by the dotted line—and, in the second, by the feeling of enclosure which the darker tones toward the edge create.

In combination, these several features, by directing the attention to the point (1), concentrate the interest there and ensure the establishment of unity. That it is so well expressed is an indication of the satisfactory

inwards, and so towards the centre of interest, such an arrangement of tone conveys a feeling of harmony, and, at the same time, the darks being full and rich, an impression of quality.

This latter impression owes its existence partly to the selection of the subject and partly to a thoroughly adequate measure of technique. The contrast of a subject of this character

would exceed the normal range, and not only would it be necessary for the exposure to be calculated pretty accurately having regard to the consequent restriction in latitude, but it would also be essential for either the time of development to be curtailed or a softer grade of printing paper than normal to be employed in order to correct the tendency towards excess of contrast. The degree of development of the print itself would have to be carried out to the full extent demanded by its type, and the adjustment of its range to that of the negative would call for considerable experience and judgment.

Insomuch, the work is excellently contrived, but it could be wished, perhaps, that the upper and lower portions of shadow tone at (2) were joined together along the left-hand edge. It does not happen to be so, but, could it have been managed, a slight inclination towards running out at that point would have been prevented, and the line of the spiral would be, as it should be,

more "in" the picture.

A slight adjustment such as this should not present much difficulty. It might be arranged by the local application of an oil pigment well rubbed in, and it would, of course, be necessary for the tint and depth of tone to be exactly matched. There is, however, a natural boundary for the inward side of the projected addition in the shadow of one of the elements of the window frame, which would help, and, if the space were filled in, it would serve.

"MENTOR."

nature of the arrangement, and it is aided, to an appreciable extent, by the placing of the tones in their relationship with one another.

It will be observed that the tones surrounding the main light at (1) are but a shade or so darker; around these are steps of deeper tone, and these are succeeded by further degrees of depth till, towards the edge—except for some slight modifications which furnish a necessary relief—the greatest darks are reached. Besides tending to direct the attention

## SOME CRITICAL COMMENTS on the Beginners' prints reproduced on the opposite page

THE device of showing a dark against a light, or a light against a dark is a sound practice, for, besides having the authority of the rules of composition behind it, it proves one of the most practical ways not only of indicating what the subject is, but of showing it to the best possible advantage.

### **Extremes in Conjunction.**

It is not the only method, of course, but it is as efficient as any other, and, although it may not have been intentionally adopted, its value is to be seen in Nos. 1 and 7 of the prints reproduced on the opposite page.

In the former, "... while the Sun Shines," by C. Allan, the head of the child is in light, and it comes against a dark portion of the setting. It stands out extremely well, and there is no doubt about what is intended to be the subject of the picture. The fact that the figure is the most important element is shown, as well, by the scale and by its placing in the picture space; but that it is so well isolated lends it a value that the other factors could not impart by themselves, and makes the intention perfectly clear.

As a child study of the genre type it is good work, and the fact that the figure is shown in sunshine confers a further artistic attraction. This also is enhanced by the placing of extremes in conjunction, for the sunlit head comes against a shadowed part of the setting, and the light on the body is nicely set off by the foreground shadow below.

This shadow again is useful inasmuch as it gives the picture a firm base, and another good feature is the degree of tone in the sky, which, on account of its depth, does not introduce a note of competition.

### **Dark against Light.**

Were it light in tone, much of the value of the lights on the figure would be lost, simply because the introduction of another high-light would compete with it for the attention and divide the interest which should—and now does—attach only to the child.

In No. 7, "Thatching," by Captain M. C. Hogg, the tone values of the

sky are equally adequate, but, here, the arrangement is reversed, and the dark of the figure, as the principal element, is shown against the light of the sky. The isolation of the figure is no less effective than in the former instance, and his placing—just off the centre and sufficiently distant from the edge to avoid any feeling of weakness—is nicely judged.

It is quite as strong as the other, and, with an unassertive collection of accessories for a setting, makes a pleasing little picture. The inclusion of the roof posts does introduce a set of lines that the picture would be better without, but, unless it were possible to get above them, it would be difficult to avoid their inclusion.

The sky in No. 6, "The Homestead," by Arthur Heap, has just about the right degree of tone, and the rendering of the whitewashed walls of the cottage in sunlight against it affords evidence of a high level of craftsmanship.

### **Division of Interest.**

The arrangement, however, does not reach the same standard. From the title it is to be inferred that the cottage is intended to be the centre of interest. Its light tone and brightness does attract a share of the attention, it is true, but the light is shown against another light; its position is too near the edge for strength, and the dark of the tree, which is in a much more forceful position, outweighs it entirely.

The real centre of interest, as the picture stands, rests with the tree, but the light on the cottage has the effect of dividing the interest, and, on this account, the print is incapable of maintaining the attraction it should.

If the placing of these two items could be re-arranged so that the cottage adjoined the tree, their attraction would be united and the fault corrected. Whether that could be done or not would depend on the lie of the land. If it were feasible to find a viewpoint some little distance towards the right, the line of sight being inclined more to the left, the cottage would appear behind the tree and the required junction would be effected.

Incidentally, the cow is a not too

fortunate feature, for, facing the edge as it does, it has the effect of directing the attention outwards, whereas, if it were turned the opposite way, the effect would likewise be reversed and the interest would be retained within the picture.

### **Directional Lines.**

When a figure is included in a picture, the eye tends to follow the same direction in which the figure is looking. There should be, therefore, more space in front of a figure than behind, and this is one of the reasons which make the placing of the man in No. 7 good and that of the cow in No. 6 bad.

In the case of No. 2, "Clovell Harbour," by P. M. Brocklesby, the same contention applies to the boat. Its bow is facing the right-hand edge and the eye follows the same direction out of the picture. If the boat were reversed, so would the sense of direction it imparts, and, as far as the arrangement of lines is concerned, they would make quite a satisfactory composition; but, with practically no tone at all in the sky, the light on the water has no chance of holding the attention.

That light should be the centre of interest, but, despite its good position, it cannot so act because of the competition of the sky. A light filter of medium depth, particularly if employed in conjunction with panchromatic material, would correct matters, but now that the negative is made, the only practical way of introducing tone into the sky is by local overprinting.

The same fault recurs in No. 4, "In Smooth Waters," by W. H. Scott Badcock, and similar treatment is indicated; while in No. 3, "The Net-Maker," by E. E. Oakley, the patch of lighter tone along the right-hand margin has much the same effect, i.e., it draws the attention away from the figures. These are quite well caught, although a little more space between them would be an advantage. This might possibly have been contrived by the choice of a viewpoint slightly to the left, and a setting of contrasting tone would enable the figures to be better isolated.

"MENTOR."

# With the Beginners

NOTES AND NOTIONS FOR THE  
LESS ADVANCED WORKER

Every week an article will appear under this heading dealing with a topic of interest to the novice in photography.

## HUNTING FOR SUBJECTS.

A GOOD deal of the interest, and sometimes excitement, of photography lies in hunting about for what we consider sufficiently good subjects. We may draw a blank, or we may have unexpected luck. It is nearly always a lottery.

We may hunt over familiar ground, and this is not so unpromising as it may seem; for where we have often found little or nothing, we may come across something really fine—the result of unusual lighting or atmosphere. Sometimes we explore new territory, with no idea of what we may happen upon, but always hoping for the best. Or we may be prospecting over ground which although new to us has been made more or less familiar to us by the pictures of others; then we are faced with the pleasant problem of trying to do something different from “the usual thing.”

Or, again, we may conduct our hunting in a leisurely manner, with plenty of time for exploration and consideration; or it may have to be done with a rush—a race against time.

Fig. 2.

Here is an instance of the latter case. On a recent coach tour I was unloaded at a little town called Fordingbridge, with the information that there was a forty-minutes' interval for tea. Naturally the ladies of the party were delighted, and obviously made the most of the time and opportunity. I mentally voted for an extra course or two at dinner later

on, and took out my little camera for a rapid prowling round.

A sort of instinct led me to the fence at the bottom of the tea-garden, where there was a glimpse of river and some of the arches of an old stone bridge—more alluring to me than tea and pastries. There were a few nice willows and other trees, and two men quietly fishing from a punt. Not an exhibition picture, perhaps, but pleasant enough under a gleam of soft sunshine. So I had a shot at it, and the result appears on one of the Art pages.

Photographic friends have applauded my wise use of panchromatic material and a filter to get the colour values of the trees. I appreciate the applause, but do not deserve it. I used orthochromatic film—Verichrome as a matter of fact—and no filter. There was a good deal of wind, and the water was running swiftly, so that I should not have cared to risk either a longer exposure or a larger stop. Only sharp definition everywhere would do justice to the “texture” of the trees.

Then I found my way out on to the bridge and looked at the river beyond. By a devious route I reached the bank and made one or two exposures, of which Fig. 1 is a sample. The light was changeable, and not favourable for the subject; and the wind was gusty, so that the rushes and

Fig. 1.

willows were almost continuously agitated.

It seemed to me a reasonably good example of a certain type of English stream, and anyhow it would serve to remind me of Fordingbridge. An artist has called me an idiot for making so much of the foreground reeds, which I had been at special pains to include. They were, he said, exaggerated in size, uninteresting and monotonous, and they quite overwhelmed the bridge. Why did I not have the sense to make a narrow panel of the bridge? I humbly replied that I had already chosen a different viewpoint and done so. Whereof Fig. 2 is my witness. With equal humility I maintain that the rushy versions are more characteristic of what I saw.

Looking down the stream, and walking some distance along it, I had a shot against the light (*contre-jour* the wise call it), and this is shown in Fig. 3. I have ruled two lines across it to indicate roughly the part of the negative which I think should be enlarged.

Then I hurried back just in time to find the coach and the ladies loaded to capacity.

A day or two ago a friend of mine was describing some interesting things in an old church. They sounded good enough for records. "Where is this church?" I asked. "At Fordingbridge," he replied. Which

Fig. 3.

shows that it may be a great advantage to know something of a place before we go hunting in it. All the same I like my note of the anglers better than a tea-garden gorge.

On another occasion I found that I had to change from one bus to another with a twenty-minutes' interval, at a place I had passed through previously. Here again I did a bit of intensive hunting against time. Needless to

say, it was the wrong time of day for the lighting, but I bagged half a dozen subjects worth adding to my records of places visited.

Perhaps I ought to blush to admit that in my spare time during a week's trip I exposed ten film packs, and got 120 printable negatives. I have been asked how I developed them. Next week I hope to give an account thereof.

W. L. F. W.

## Letters to the Editor

*The Editor is not responsible for the opinions of his correspondents.*

### A NEW METHOD OF PRINT PRODUCTION.

SIR,—All praise to Mr. Lluellyn for his new method of extracting the full range of gradation from our negatives. This is what I have been looking for since first I made a print and wondered why the negative was so much superior to it. I had almost abandoned printing on paper, and gone over to transparencies, but am now encouraged to try again. I may mention that I am a painter as well as a printer, so have a broad base for my criticism.

It seems to me that printing is analogous to the stretching out of a long camera bellows. The bellows is shut tight and is resting on a rather sticky table. One catches hold of the "shadow" end and starts to pull the bellows open. Soon it is well open at that end and in the middle, but still almost closed at the "light" end. Certainly a stiffer bellows (or softer paper) can be used, but then no part will open out properly.

Now Mr. Lluellyn's method, to use the same analogy, is to pull the bellows for a long distance till there is no doubt of its full extension at the "light" end. We find then that the end we took hold of (the shadow end) is out of our range of vision, so we then take hold of the "light" end and pull the whole thing back to the middle of the table right opposite our chair. This action, of course, still maintains the even extension of the bellows.

It may be urged that with the carbon processes one starts from the shadow and works towards the light. This may be temporarily true while developing, but the final result is due to the progress of the printing, which proceeds in the same manner as the printing-out papers.—Yours, etc.,

PERCY B. ASHWORTH.

### THE ENLARGER PROBLEM.

SIR,—I feel that Mr. J. C. Scott's letter in a recent issue calls for a reply, for no matter how well-meaning this gentleman may be, some of his statements may cause trouble with any beginner who happens to read them.

Let me assure Mr. Scott that to enlarge two negatives at the same time (no matter how alike they may be in density) is the worst possible advice he could give. It is mainly due to such practices as these that the standard of much amateur pictorial photography is so low—appallingly low considering the magnificent negative and positive material available.

If Mr. Scott would permit me to offer him a word of advice I would suggest that when trying to make exhibition prints he should go into his dark-room and try to make the best print possible from one negative and confine his whole evening's effort to this task.

As a very able photographer has said, "A good print only remains so until a finer one is made from the same negative." If Mr. Scott adopts this method he will be amazed at the improvement in his work in a very short time.

Mr. Scott's advice on enlargers is equally ridiculous, apart from the enormous waste of light caused by the large half-plate condensers being "miles" away from the small negative, the normal lens used with a half-plate enlarger is most unsuitable for miniature negatives owing to its long focal length.

In conclusion I would like to ask Mr. Scott if he has ever made a  $15 \times 12$  print from a third of a negative (size 16 on  $3\frac{1}{4} \times 2\frac{1}{4}$ ) with an enlarger such as he recommends? If so, I should like to know how he managed to focus it—maybe he used a pair of field-glasses!

A normal half-plate enlarger *can* be used for enlarging small negatives very successfully—after it has been considerably modified.—Yours, etc.,

H. W. LAMBERT.

# Picture Points

## for Beginners, No. XXII.

by RICARDO

### Proportions in Print Trimming

JUST as we saw in the last series of "Picture Points" that the mount should be trimmed to suit the print, so we can say that the print should be trimmed to suit the composition of the subject matter.

While it is admitted that for a blank space a rectangle in the proportion of seven to ten is probably the most pleasing shape, it does not follow that this will suit any print and subject. If we take a look at the five sketches we can see how this applies.

No. 1, because of its character, can be trimmed to this proportion, but every one of the others must be trimmed so that its composition will show to its best advantage. In each of these examples the subject matter has been purposely drawn to fill the picture space and to show, as far as possible, that further trimming would detract from the pictorial composition.

A square shape, No. 2, is by no means uninteresting provided that the motif is soundly arranged, while the shapes of Nos. 3 and 5, although rather narrow, are quite satisfying in relation to their subjects.

While the triangular and circular shapes in No. 4 are anathema to most workers, credit must be given to these photographers in that they visualise their design more thoroughly from start to finish without having any latitude in the way of trimming the finished print.

1.—Pleasing proportions.  
2.—Square pictures are ideal for some arrangements.

3.—A long picture emphasises the motif.  
4.—Freak shapes, perhaps, but good designing is needed.  
5.—Tall pictures give dignity to the subject matter.

### A Point on Backgrounds and Lighting

THIS is a point to be watched whenever backgrounds are used. If we study the first sketch the first criticism we can make is that the shadow of the vase is much too strong in tone contrast for its area. The effect is to draw too much attention to the shadow instead of to the motif, the group.

The cause of this trouble is obviously the background. It is much too near the farther subject, the vase, and its tone value, compared with the group, is too light.

Consequently, the shadow is not diffused enough because of its nearness to its subject, and its shape is too hard and well defined to compensate for its dark tone. While it is true that a stronger secondary source of light could be positioned to lighten this shadow tone, it is only a remedy and not a cure.

It will be noticed, too, that had a second object of approximately the same size been used, instead of the small inkpot, the contrast in size of the shadows would not have been so noticeable and would have helped to alleviate matters. But the small inkpot was purposely included to show clearly the result of placing the background too near the subject. The second sketch shows how, by placing a background of a darker tone a little farther away, the unnecessary counter-attraction has been removed. It is also interesting to note how the "direction" of the inkpot has been altered to better advantage.

# Amateur Cinematography

NEWS, NOTES AND MATTERS OF INTEREST FOR ALL CINEMATOGRAPHERS USING AMATEUR CINÉ APPARATUS.

## Lumens and Light Factors By S. E. L. M.

An article for the Projectionist who is interested in results.

OWING to the difficulty of avoiding limitations in low-priced equipment, brilliancy of image has always been a matter of some concern to the great majority of amateur projectionists. More than a few have tried to cope with their problem by fitting a bigger lamphouse; others have introduced supplementary mirrors—and yet others have reluctantly been compelled to rely upon a smaller size of picture.

My own remedy for increased brilliancy is to overhaul the other end of projection first; in short, to see that the screen represents the maximum of efficiency for the task it has to perform. And this is hardly a popular remedy, since in many of the cases under discussion the "most efficient" screen may well cost almost as much as the projector itself.

For this reason, most of the amateurs concerned may prefer to use a combination of *reasonably* efficient screen and projector brilliancy representing the utmost value for the money expended.

### Lamp Specifications.

Three general specifications exist, and these are firmly adhered to by the majority of manufacturers. They are (1) a light source of the smallest convenient magnitude, (2) a standard of brilliancy that can be maintained without excessively "over-running" the filament, and (3) freedom from structural weaknesses. The first is ensured by coiling the filament into spirals and mounting these multiple fashion as closely as possible together. Over-running has presented a more difficult problem and has not yet been achieved without somewhat affecting the life of the lamp; nevertheless, certain manufacturers, e.g., Paillard-Bolex, have placed this matter in the hands of the amateur himself by providing an external resistance which cuts out the overload until circumstances justify its application.

Structural weaknesses likewise, although not entirely absent from earlier lamps, have been eliminated in the light of practical experience.

More important than these, however, are the "specifications" occasionally given by several manufacturers. In this connection, I was once informed that the *efficiency* of a lamp was merely its candle-power! Again, this factor has been defined as the total wattage consumed by the lamp divided by its candle-power. Neither of these definitions can, however, convey to the amateur pre-

cisely what he most needs to know—and that is the *screen brilliancy* which any particular lighting system is going to yield.

### Lumens.

That is where the lumens come in. For the lumen is the most satisfactory unit that can be applied to light emission, one lumen representing the light flow covering an area of one square foot—any and every point of which is exactly one foot from a light of one candle-power.

This represents not a misleading specification but a means whereby we can estimate the value of a lamp in terms that convey exactly what we want to know. We are going to be more easily attracted by a guarantee of thirty lumens than we are by one of twenty lumens—or, for the matter of that, by one of any smaller number.

And, if the amateur be at all concerned about running costs, he may adopt a more convincing formula for the "efficiency" of his lamp—expressing this as the ratio of what he puts *into* the

lamp to what he gets *out of* it. All of which may be memorised in the following form:  $E = L \text{ over } W$  (efficiency equals lumens over wattage).

### Accessory Factors.

Nor does the quest for greater brilliancy end here, for certain accessory factors have to be considered. It is impossible, for example, to overestimate the importance of using a clean screen, clean films and a clean lens. An inefficient shutter, too, can cut down the amount of light reaching the screen, whilst it does not require any delicate instrument to judge the dimming effect of much tobacco smoke.

Similarly, a poor or badly-focussed lens can rob the screen of much light, as can the too-high setting of a resistance.

\* \* \*

And a final word. Remember that screen brilliancy is mainly a matter of contrast. Keep the room as dark as it can be made, and most assuredly the pictures will appear all the brighter for it.

*Autumn weather at the coast will frequently be productive of many excellent action subjects of a topical nature that will make good ciné pictures.*

# Using a Photo-electric Exposure Meter

UNDOUBTEDLY the most important advance in exposure calculation, since the inception of photography, occurred when the photo-electric exposure meter made its debut. To cinematographers this instrument seems the answer to all their exposure problems, and there can be no doubt that it is the ideal instrument for this work. There can also be no doubt, however, that used with a little more imagination and knowledge it can serve the mass of ciné workers even better than it does now.

On a normal landscape subject, without excessive contrast, a direct reading on the meter will give very accurate results. Unfortunately, on very contrasty subjects, the meter is likely to be unreliable used in this way. Thus, if we get a large dark area and a small area of very brilliant light, the exposure indicated will be less than that actually required. The best way to work in such circumstances is to find the tonal range of the subject; that is to say, the ratio between the brightest high-light and the darkest shadow it is desired to record. This is done by

taking the meter close up to the darkest and brightest portions of the subject in turn. For instance, the reading beneath an archway might be  $f/3.5$ , and the reading for a white building  $f/22$ , giving a ratio of  $\frac{(3.5)^2}{(22)^2} = 40:1$ .

Modern reversal film can handle a tone range of about 100:1 (negative-positive rather more). Thus we can easily get our 40:1 ratio subject within these limits. The best stop to use in the circumstances would be the one halfway between  $f/3.5$  and  $f/22$ , namely,  $f/8$ .

If the subject had had a greater tone ratio than 100:1 it would have been necessary to choose whether the high-light or shadow detail was more important. Suppose the ratio had been  $f/2 : f/32$ , that is 1:256.

This is very much greater than the latitude of reversal film will handle, and either the high-lights or shadows must be sacrificed. If the shadow detail be sacrificed, then the high-lights can be correctly rendered from the brightest portion down to the parts that are one-hundredth as bright. That is to say

those portions of the subject represented by the ratio  $f/32 : f/3.2 (=100:1)$  and the stop required to obtain this result will be the intermediate one,  $f/10$  approximately. The procedure is, of course, similar when it is desired to preserve full detail in the shadows, although, in that case, the correct tone values are rendered from the lower end of the scale upwards.

A point often overlooked when using a photo-electric exposure meter is the fact that it has a colour response different from that of the film. Cells of the photo-voltaic type, used in exposure meters, have a maximum response in the red end of the spectrum, whilst films, on the other hand, have a pronounced peak in the blue end. This peculiarity should be remembered, particularly when exposing on clouds. Point the meter at a part of the sky where there are plenty of white clouds, not at a part where large patches of blue sky exist.

Finally, remember that the photo-electric exposure meter is a delicate, scientific instrument; "Treat it like a watch." P. H. DRAKE.

## Letters to the Editor—continued from page 457.

### TECHNICAL DATA WANTED.

SIR,—I was much interested in Mr. A. R. Turpin's exhibition picture, "The Church on the Hill," in "The A.P." of September 11th. I lived in the locality some twelve years, and attempted the same subject on more than one occasion with two different cameras, but I think my lens was too long a focus, as I was not successful. It would interest me still more if Mr. Turpin would kindly say what type of camera and lens he used to take this photograph.—Yours, etc., G. L. WOOD.

### CAMERA MOVEMENT DURING EXPOSURE.

SIR,—The volume of correspondence on my short article indicates the interest taken in the subject, and it is gratifying to see that it has progressed from sarcasm, through argument, to experiment. The last of these ought finally to have killed my argument stone dead, instead of which it has proved and clarified my case. The correspondence has helped me to see more into the matter, and I think I can now briefly restate the case and carry all my critics with me.

Suppose a half-plate camera and a miniature, both fitted with theoretically perfect lenses, are mounted on rigid stands and are perfectly focussed on the same subject. The result of exposure will produce two images of perfect and equal sharpness. Now repeat the exposures but push each camera a distance of  $1/100$ th in., whether by swinging round the lens or by a purely lateral movement matters little.

The result will be two blurred images, the amount of blur being exactly equal on each, as Mr. Breeze's careful experiment proved. Both pictures have a blur which can be defined as a circle of confusion of  $1/100$ th-in. diameter. And now my point begins. The large picture, with its  $1/100$ th-in. circle is sharp to the eye, and, as it requires no enlargement, the camera movement has not mattered at all. But what of the miniature? Its sharpness of  $1/100$ th-in. circle will simply not do, for it has to be enlarged, and the smaller the picture the greater the enlargement necessary and hence the greater the importance of the camera movement. The only point to be placed on the credit side of the miniature ledger is that it is usually fitted with

a large-aperture lens, thus allowing of reduced exposure and a proportional reduction in camera movement. But, as I showed, on the balance the small camera loses. It is usually conceded by all writers that the midget is the more difficult to hold still. Personally I doubt it, and think there is confusion of thought due to a failure to recognise the far greater importance of a trifling movement. The purpose of the article was to express this fact in terms of figures. But the fact surely cannot be disputed.—Yours, etc., R. E. DICKINSON.

### "THE SHADOW ON THE SAND."

SIR,—Was it absolutely necessary for a woman to be naked to produce "The Shadow on the Sand"? Would a wrap or bathing-suit obscure the shadow? Is a woman's body so common and unholy that every now and again she has to be stripped, stark naked, for men to stare at with curiosity and evil eyes? I wonder how many of your male readers noticed the insignificant shadow? I wonder! About ten per cent. It is most unfair, mean and cowardly to treat women in such a way. Most women are shamefaced and do not like to be exposed, even in illness. Why, then, outrage us? The Bishop of London intends to fight down nudity on the stage. I sincerely hope he will fight it down in books also. What is the use of suppressing the stage, when books show figures far more nude and disgusting than ever dare appear on the stage. A woman who would pose for that picture is not to be admired, she has sadly fallen from her place of honour. Please keep the book clean that women, as well as men, can look at it without feeling uncomfortable. It can easily be done; just warn the public: No nude figures will be exhibited.—Yours, etc.,

"WOMANHOOD OUTRAGED."

### "STRAIGHT" OR "CONTROLLED"?

SIR,—How refreshing to read the article by Mrs. Laurie Black in a recent issue of "The A.P."

Surely this is the *Art of Photography* and not the art of Fake and Imagination as practised by Mr. G. L. Hawkins in the previous issue. Such methods as practised by him give the real photographer the proverbial "pain in the neck."—Yours, etc., A. L. MURGATROYD.

# The Week's Meetings

*Societies will have their meetings announced here if the syllabus is sent to us at the beginning of the session or from time to time.*

## Wednesday, November 6th.

Bayswater and Paddington P.S. "Wandering in France." H. A. Keyser.  
Bethnal Green C.C. Materials: What to use and Why.  
Birmingham P.S. Display of Films by Members of Ciné Section.  
Borough Polytechnic P.S. Third Print Competition. Outings Print Competition.  
Bradford P.S. Pictorial Group Evening. Night Photography.  
Brighton and Hove C.C. "Seascape Photography." C. Cecil Davies.  
Bristol P.S. Whist Drive.  
Bury P.S. "Burmese Pagodas and Priests." W. E. Heginbotham.  
Carlisle and County A.P.S. Portfolio. Miss Kate Smith.  
Civil Service C.S. "The Documentary Film." Sigurd Moir.  
Coventry P.C. M.C.P.F. Portfolio and Slides.  
Croydon C.C. "The City of St. Swithun." H. B. Burdekin.  
Dennistoun A.P.A. "Picture-Making with a Camera." S. Bridgen.  
Edinburgh P.S. "Architectural Photography." A. Graham.  
G.E. Mechanics' I.P.S. Apparatus, Cameras, Lenses, etc.  
Handsworth P.S. "Lantern-Slide Making." J. O. Wilkes.  
Ilford P.S. "Photographic Chemicals: Their Properties and Use." P. Evans.  
Kodak Works P.S. The Educational Film. Miss Mary Field.  
Northallerton and D.P. and C.S. Ciné Evening—Other Societies' Work.  
Partick C.C. "Lantern-Slide Making." H. G. Cooper.

Halifax P.S. "The Bromoil Process." A. Barraclough.  
Hamilton P.S. "Bromide Enlargement." I. Gordon.  
Kilburn and Willesden P.S. "This Pictorialism." E. C. Butcher.  
Leeds P.S. "Panchromatic Plates and Their Use." J. P. Oakes.  
Leicester and Leicestershire P.S. Gevaluxe Demonstration. G. Findley.  
Nelson C.C. Competition (Portraits of Club Members only).  
Newcastle and Tyneside P.S. "Wild Birds and a Camera." A. F. Park.  
Norwood C.C. "Light Filters and Their Uses." J. Ainger Hall.  
Pontefract P.S. Enlarging Prints for the Y.P.U. Competition.  
Portsmouth C. and Ciné C. "Netley Abbey." E. C. Lomer.  
Rugby and D.P.S. M.F. Competition Prints and Slides.  
St. Bride P.S. "Architecture." J. W. Hodges.  
Sheffield P.S. "Printing." Thomas Duncan.  
Small Heath P.S. "Warwickshire Medley." Lewis Lloyd.  
S. Shields P.S. "The Art of Slide-Making." W. J. Brown.  
Stafford P.S. "The Amateur Photographer" Prize Slides.  
Warrington P.S. "A Trip to Rhodesia." Leslie Armstrong.  
Whitehall C.C. "Gleanings." E. Dockree.  
York P.S. "Bromoil Process." D. J. T. Bagnall.

## Wednesday, November 13th.

Bethnal Green C.C. Practical Work.  
Birkenhead P.A. Slide-Making Demonstration.  
Birmingham P.S.C.S. "A Further Talk on Current Ciné Topics." P. W. Harris.  
Borough Polytechnic P.S. "The Simple Technique of True Landscape." J. H. Clarke.  
Brighton and Hove C.C. "The Dead Cities of North Africa." Major C. Howard.  
Bristol P.S. "By Zeppelin to Rio." H. Norton Matthews.  
Coventry P.C. "The Land of Mist, Sunshine and Pardons." J. E. Hall.  
Croydon C.C. "Miniature Camera Photography." H. B. Burdekin.  
Dennistoun A.P.A. Whist Drive.  
G.E. Mechanics' I.P.S. Print and Slide Competition.  
Handsworth P.S. Members' Print Criticism.  
Harrow C.C. "A Ciné Cruise to Northern Capitals"; also Animal Films. H. E. Isard.  
Ilford P.S. "Etchadine." G. H. Potts.  
Kodak Works P.S. "The Wonderland of Nature." W. Percival Westell.  
Northallerton and D.P. and C.S. "Enlarging." J. P. Utley.  
Partick C.C. G.D.U. Portfolio.  
Pontefract P.S. Military Whist Drive.  
Rotherham P.S. Social Whist Drive and Presentation of Awards.  
S. Suburban and C.P.S. "Ciné Work in the Smallest Size (8 mm.)." W. A. E. Farmer.  
Stockport P.S. Exhibition Prints and Slides to be handed in.  
Worcestershire C.C. "Light, Colour and the Photographer." J. N. Cockin.

## Forthcoming International Salon at the South African "Empire Exhibition"

AN interesting photographic event will take place in South Africa next year, when the Johannesburg Photographic Society's International Salon will be held in the Art Gallery of the Empire Exhibition. The Society has taken up with enthusiasm the suggestion that their annual show should be made one of the events of the Exhibition, and in

view of the special Empire character of the Exhibition it is proposed to invite an extensive and representative entry from this country and the Empire. In addition to the annual Salon, the Johannesburg Society plans to hold a series of photographic displays at intervals during the run of the Exhibition, one of which is to be devoted to work

from Great Britain and Ireland, and another to be devoted to Advertising and Commercial Photography. The Empire Exhibition. South Africa, will be held in Johannesburg from September, 1936 to January, 1937, and buildings are now being constructed to house the British, South African, Colonial and Dominion Governments.

# Readers' Questions ANSWERED

GENERAL.—All communications for the Editor should be addressed: "The Editor, *The Amateur Photographer and Cinematographer*, Dorset House, Stamford Street, London, S.E.1," and in every case, without exception, must give the name and address of the writer.

CONTRIBUTIONS.—The Editor is glad to consider original, up-to-date manuscripts on photographic subjects. All contributions must be typewritten, or in very legible handwriting on one side of the paper only. Letters or communications arising out of matters already appearing in the paper are not paid for. The Editor disclaims legal responsibility for the safety of matter submitted to him, but he will endeavour to return rejected manuscripts, etc., when a stamped addressed envelope is enclosed. MSS. or prints that are not actually accompanied by a stamped wrapper or envelope can in no case be returned. Reproduction fees for prints are only paid by arrangement beforehand. The sending of a print, without any condition stated, will be taken as permission to reproduce it without fee.

ENQUIRIES AND CRITICISM.—Advice, Criticism and Information are freely given, but the following conditions should be read carefully before applying, as any communication which does not comply with the rules must be ignored.

(1) See "General" above. (2) Every question and every print for criticism must be sent separately through the post, and must be accompanied by a separate stamped addressed envelope. No exception can be made in any case to this rule, except so far as enquiries or prints from Overseas are concerned. (3) Neither enquiries nor prints for criticism must be enclosed with competition prints. (4) On the back of each print sent for criticism, in addition to the name and address of the sender, must be the title (if any), and the criticism coupon from the current issue. (5) Enquiries should be clearly written, on one side of the paper only, and should be specific and not general. Such enquiries as "How can I take interiors?" or "Can you give me some hints on outdoor portraiture?" are too general to be dealt with in this section. (6) All envelopes should be distinctly marked "Query" or "Criticism," as the case may be. (7) Prints are sent for advice or criticism on the distinct understanding that by so doing permission is given for their reproduction without fee. We endeavour to deal promptly with enquiries, but cannot undertake to answer by return of post, nor can we give precedence to any enquiry.

A selection of those replies is printed each week, but all questions are answered by post. Enquiries from abroad must contain a coupon also, but it need not be from the current number, and should be cut from the latest issue to reach the enquirer.

## Lantern Illuminant.

Would a 6-volt bulb, similar to that used in Pathé projectors, be suitable for a lantern if a reflector is used? G. R. (Lincoln.)

If you mean a lantern for projecting standard size slides we do not consider that you will get sufficient light in the way you suggest. If, however, you think of trying it we doubt whether either a reflector or painting the inside white will make any appreciable improvement.

## Front Lens Focussing.

Does the new focussing arrangement for self-erecting cameras, whereby the front of the lens is revolved, interfere with the corrections when focussed at subjects nearer than infinity? J. C. (Bromley.)

The type of lens where the front component only is used for focussing is specially designed for this variable separation between the first and second component, and the various corrections are constant, whether the lens is focussed for near distances or at infinity.

## Public Highway Photography.

Recently, while I was taking a photograph of a roadside cottage, the owner appeared and told me that I had no right to make an exposure of private property without permission. As I was standing on the main road at the time, am I right in assuming that I could photograph anything that is visible from that point, whether private or not? H. W. P. (Southampton.)

The owner of the cottage did not know what he was talking about. The only consideration when photographing from a public thoroughfare is that you must not cause any obstruction to those using the thoroughfare. A camera used in the hand would not be considered an obstruction, but if the camera were used on a tripod and placed on the pathway or road without reasonable care being taken in guarding it and one's self against pedestrians and traffic, then the law has the right to order you to remove it. Under the circumstances you mention, you were quite in the right.

## Backing-paper Marks.

I have recently had trouble from the backing-paper of my roll films leaving marks when developed in my Kodak tank, although care is taken in keeping the paper taut. Can I remedy it by removing the paper? W. E. D. (Kew.)

You cannot remove the backing-paper when using the Kodak tank. Personally, we have never had any trouble with the paper sticking to the film, but the slight mark made when this does happen can be removed by polishing up the back of the film with a rag moistened with Baskett's reducer.

## Uneven Development.

I am enclosing some negatives which are uneven in density. Can you suggest the cause and a remedy? W. F. (London.)

The lighter patches on your negatives are due to uneven development. At intervals, especially at the commencement of development, the dish should be gently rocked, sometimes in one direction and sometimes in another. Above all, violent rocking in the same direction should be avoided. We hope that this hint will prevent any further trouble.

## Uneven Illumination in Enlarging.

I am constructing an enlarger of the diffused electric light type and I am experiencing difficulty in getting even illumination. How far from the negative should I place the lamp? What power and type of lamp is best for this purpose? M. C. (South Shields.)

We have often pointed out that it is extremely difficult to illuminate evenly a quarter-plate negative with a single lamp unless a condenser is used. The distance of the lamp from the negative must be decided by the position which gives the most even lighting on the easel, and it is generally unimportant whether the lamp itself is vertical or horizontal. The illumination tends to become more even as the lamp is moved farther away from the ground-glass, but this, of

course, weakens the light and so increases the exposure. A 60-watt lamp will answer, but you would naturally increase the light and shorten the exposure by having, say, a 100-watt lamp. The pearl or frosted variety is the best for enlarging purposes.

## Brown-Blacks on Gaslight Paper.

Can you tell me what is the cause of the brownish tints in the enclosed gaslight prints? They were developed in Rodinal with 10 per cent potassium bromide added, and fixed in acid hypo. C. R. (Norwich.)

We do not see anything to complain of in the prints you send. Where the warm tone is most in evidence it is probably the result of slight over-exposure. If you want to get pure black tones we should advise you to use the developer recommended by the makers of the paper.

## Square Filters.

How can one use square glass filters on an ordinary folding roll-film camera? W. B. (Bolton.)

When square filters are used a special fitting is made to attach them to the lens. This generally takes the form of a ring to which two metal runners are soldered, and sometimes with a bar at the bottom so that the filter is dropped into the grooves, and the bar stops it in position central with the lens.

## Print Reversal.

I wish to make an enlargement from a 9.5-mm. positive cine film on bromide paper. As the image will be negative, is there any process by which it can be reversed to give a positive? F. C. T. (Enfield.)

It is of no use trying to reverse from negative to positive with ordinary bromide paper, as the emulsion is not intended for this purpose. The usual plan is to project, through the enlarger, on to an "ordinary" plate or film and so make a new negative. From this, a bromide enlargement can be made, with the advantage of control work being made possible.

## Hectograph Jelly.

I understand that an adhesive in the form of a jelly can be used for sticking bromide paper on to a vertical easel; can you give me the formula? C. D. (Ealing.)

A good stationer could probably supply you with the Hectograph material ready made. It can be prepared as follows: Soak 4 oz. of gelatine in 8 oz. water for 48 hours, stirring at intervals. Then add this to 14 oz. of glycerine at 200 degrees Fahr., stirring gently until a smooth mixture free from airbells is obtained.

## Bromide Solution.

What is the best and most useful solution to make from 1 oz. of potassium bromide? How much of this solution should I add to the developer? A. J. F. (Southgate.)

We should advise you to dissolve the ounce of bromide in about 8 oz. of water and make it up to 9 oz. 1 dram. You could then take it that 10 minims of this solution would contain one grain of bromide. How much you should add to a developer would depend upon the formula; but however many grains were mentioned you could easily secure that number by taking ten times as many minims of the solution.

# The Amateur's Emporium

## Prepaid Advertisements

### SALE AND EXCHANGE: AMATEURS ONLY—

12 words or less ..... 1/-  
1d. for every additional word.

### PROFESSIONAL AND TRADE—

12 words or less ..... 2/6  
2d. for every additional word.

Each paragraph is charged separately.

**SERIES DISCOUNTS** are allowed to Trade Advertisers as follows on orders for consecutive insertions, provided a contract is placed in advance, and in the absence of fresh instructions the entire "copy" is repeated from the previous issue: 13 consecutive insertions, 5%; 26 consecutive, 10%; 52 consecutive, 15%.

All advertisements inserted in these columns must be strictly prepaid, and reach the offices, Dorset House, Stamford Street, S.E.1, not later than first post Friday for the following week's issue. Advertisements are inserted, as far as possible, in the order received, and those received too late for one issue, or crowded out, are published in the first following in which there is space. The Proprietors retain the right to refuse or withdraw advertisements at their discretion.

## Box No. Advertisers

If a Box No. is required the words "Box 000, c/o 'The Amateur Photographer'" should be included in the charge, and an additional 6d. sent for registration and cost of forwarding any replies.

Letters addressed to box numbers are simply forwarded by us to the advertisers. We do not deal with the correspondence in any other way, nor accept any responsibility in connection with the advertisements.

## Deposit System

Readers may deal in safety through our Deposit System.

Purchase money should be deposited with "The Amateur Photographer and Cinematographer." The time allowed for decision is three days, counting from receipt of goods, after which period, if buyer decides not to retain goods they must be returned to sender. If a sale is effected, buyer instructs us to remit amount to seller, but if not, seller instructs us to return amount to depositor. Carriage is paid by the buyer, but in event of no sale, and subject to there being no different arrangement between buyer and seller, each pays carriage one way. The seller takes the risk of loss or damage in transit. For transactions up to £10 a deposit fee of 1/- is charged; over £10 and under £50, 2/6; over £50 and under £75, 5/-; over £75 and under £100, 7/6; over £100 one-half per cent. All correspondence must be sent to Dorset House, Stamford Street, London, S.E.1.

"The Amateur Photographer" can be obtained abroad from the following: **UNITED STATES:** The International News Co., New York. **FRANCE:** W. H. Smith and Son, 248, Rue Rivoli, Paris; Hachette et Cie, Rue Reaumur, Paris. **BELGIUM:** W. H. Smith & Son, 71-75, Boulevard Adolphe Max, Brussels. **AUSTRALIA:** Gordon & Gotch, Ltd., Melbourne (Victoria), Sydney (N.S.W.), Brisbane (Queensland), Adelaide (S.A.), Perth (W.A.), and Launceston (Tasmania). **NEW ZEALAND:** Gordon & Gotch, Ltd., Wellington. **Canada:** Christchurch and Dunedin. **INDIA:** A. H. Wheeler & Co., Bombay, Allahabad and Calcutta. **CANADA:** Imperial News Co., Toronto, Winnipeg, and Vancouver; Benjamin News Co., Montreal; Gordon & Gotch, Ltd., Toronto. **SOUTH AFRICA:** Central News Agency, Ltd.

Cheques and Postal Orders sent in payment for deposits or advertisements should be made payable to **ILIFFE AND SONS LTD., and crossed** & Co.

Notes being untraceable if lost in transit should not be sent as remittances.

## WARNING

We have received many complaints from our readers in regard to the business methods of Mr. R. L. Green, trading as R. L. Green's Photographic Exchange, of 218, Fore Street, Edmonton, London, N.18, or (possibly with different initials) as Cine Photo Supplies, 4, Holborn Place, High Holborn, W.C.1. For some considerable time we have refused to insert his advertisements in "The Amateur Photographer and Cinematographer," and from the complaints we have received it would appear that his practice is to communicate with private advertisers having goods for sale, offering to take such goods in exchange for others, or to purchase for cash. Readers are advised to ignore all such offers from this quarter.

## CAMERAS AND LENSES

# HAND CAMERAS

Third Edition

By R. Child Bayley

AN outstanding feature of this book, which makes a special appeal to all amateur photographers, is a number of separately printed plates, all from hand camera negatives by the author. These are selected to show the very wide range of subjects accessible to the snapshotter, from pure landscape to tele-photographic portraiture.

Though primarily written for the beginner, "Hand Cameras" contains much of interest to the advanced worker, and should be in the working library of all who would attain to the highest degree of artistic excellence in their work.

## NEW LEICA MANUAL

You must not fail to get your copy. It's a mine of Leica information written by 20 of the world's best authorities on the Leica camera and its possibilities. It contains 500 pages with 300 illustrations. Price 21/- (post 6d.)

### EVERY MINIATURE CAMERA IN STOCK

Including New Super Ikonta, Rolleiflex, Rolleicord, Contax, Foth-Derby and all the accessories needed for any model.

## NEW FILMO "STRAIGHT 8"

The smallest Ciné Camera in the World.

Daylight loading. Takes 30-ft. spools of 8-mm. film. Has built-in exposure chart and four film speeds. Fitted with Taylor-Taylor-Hobson f/2.5 lens as standard equipment.

£19 : 15 : 0

Nine monthly payments of 46/1.

We specialise in Bell-Howell Apparatus and have every Ciné Camera and Projector actually in stock.

### "AVO" METER

The British-made photo-electric meter with entirely unique sensitivity and accuracy. It is for use with either still or ciné camera. Simple and rapid to use. Compact and light in weight.

57/6

(Leather case, 5/- extra).

### WRITE FOR LISTS

There is one for each of your needs including Ciné Apparatus, Still Cameras, Film Library, Used Bargains and Accessories. Any or all the lists you require sent free on receipt of 2d. postage.

*and you do  
Best of all at  
Wallace Heaton's*

## THE ONLY PERFECT *Leica* SERVICE

- Wallace Heaton offers facilities which cannot possibly be obtained elsewhere. Registered Leica customers are supplied free on request with Leica spool transit envelopes to ensure safe despatch of D. & P. orders.
- Free copies of "Leica News and Technique" are sent to you periodically, and "News" binders for preserving your copies are supplied at 1s. each.
- Leica exposure record cards are also available. Full technical information is willingly given on all matters photographic. Every Leica camera, lens and accessory always in stock.
- Paraphenylene Diamine Glycin—the super fine-grain developer. Tin contains sufficient for 20 oz. Results enlarge almost any size without grain, 1s.
- Tetenal Ultrafin S.F.—latest Continental fine-grain developer. Per carton, making 600 c.c., 4s., can be used repeatedly.

### A LEICA CUSTOMER SAYS:

Yorkshire.

11th July, 1935.

"I must say I give 'full marks' and a bit over to your operators who competed with my last Leica film."

(Signed) A. B.

### "OMBRUX" Meter

The photo-electric cell meter with a marvelous lens which makes it the finest instrument on the market at such a price. Gives dead-accurate readings for still camera work. In ever-ready case, 84/- "Blendux," for ciné work, 84/-.

### ZODEL LENS HOOD

It is not only in the summer that the Zodel lens hood is indispensable. In autumn photography, with the sun at a lower altitude and giving many beautiful shadow patterns and against-the-light effects, a lens hood is even more necessary. Zodel lens hood is telescopic and folds flat for carrying. State size of lens when ordering.

Only 7/6

## BARGAINS

USED—BUT

ABSOLUTELY GUARANTEED

1—V.P. Piccolette Roll Film Camera, f/4.5 Zeiss Tessar lens, in Compur shutter, 1 to 1/300th sec. Cost £10 10s. .... £6 6 0

### We have pleasure in announcing the RESULTS OF THE WALLACE HEATON 'LIFE' PHOTOGRAPHS COMPETITION

First Prize, £10 10 0.—Edgar Rawnsley, Ribblesdale, Menston in Wharfedale, Yorks ("This Freedom").

Second Prize, £5 5 0.—G. R. Rookledge, 7, Griffin Avenue, Moreton, Cheshire ("Sticklebacks").

Third Prize, £2 2 0.—Miss Pennethorne, Lindfield, Haywards Heath ("Welding").

Winners of 10s. 6d. Consolation Prizes are being advised direct by post. The number of entries was very great, and the general standard of photography high. This made the judging a long and difficult task, and it has only just been completed.

### EASY TERMS

Anything on nine monthly instalments. First payment secures the goods.

### BRITAIN'S BEST FILM LIBRARY

Whatever film you want—9.5-mm., 16-mm. silent or 16-mm. sound-on-film—you'll find them in our comprehensive library. Hundreds of new titles have just been added which are exclusive to Wallace Heaton customers. Take advantage of this home ciné aid. Time taken by films in the post is deducted from charges. Customers are periodically notified of all new releases.

Vol. LXXX.

Wednesday, November 13th, 1935.

No. 2453.

## A Rolleiflex Picture

This remarkable picture is yet further evidence of the superiority of Rolleiflex. However experienced a photographer may be—unless he owns the *right* camera—such subjects as this would be impossible, but even the amateur can get them with Rolleiflex. The minute detail in the original enlargement is really miraculous. This is made possible by the focussing magnifier and the delicate precision with which the camera and the optical system are made. You can't go wrong with Rolleiflex—it shows you your picture full size and right way up on the ground-glass screen and a turn of the focussing knob is all that is needed to get your picture dead-sharp. Rolleiflex takes 12 square pictures on  $3\frac{1}{2} \times 2\frac{1}{4}$  8-exposure roll film for 1/-. Fitted with Zeiss Tessar F/3.5 lens and Compur shutter speeded to 1/500th sec., T. and B. Constructed to take plate back and numerous Rolleiflex accessories, £22 10 0.

See it at your dealers, or write for free descriptive brochure from the Sole Importers:

Telephone: Hol. 7311/2.

*Don't leave indoors out of your photography!*

Take advantage of the Kodak Night Photography Aids—take pictures indoors after dark. It's easy with

**KODAK SUPER SENSITIVE PANCHROMATIC FILM**

and the brilliant

**"PHOTOFLOOD" LAMPS**

It's good fun, too. Try it this evening.

A special folder is ready for you, giving a list of the Kodak Night Photography Aids, reproductions of night-time pictures, details about lights, exposures, etc., and general hints. It is free on request from your Kodak Dealer or from Kodak Limited.

You can take pictures like this with the Kodak Night Photography Aids. It was made on Kodak Super Sensitive Panchromatic Film by the light of 3 "Photoflood" Lamps in Kodaflectors arranged as shown in the diagram. The exposure was  $\frac{1}{2}$  second at f11.

# The discerning ciné amateur will appreciate the

## MOVIKON

- THE ONLY 16-mm. CINÉ CAMERA HAVING DISTANCE METER COUPLED WITH LENS FOCUSING. A necessity when using lenses as rapid as the Zeiss Sonnar  $f/1.4$  fitted to the Movikon.
- THE ONLY CINÉ CAMERA PROVIDED WITH FINDER HAVING COMPENSATION FOR PARALLAX COUPLED WITH FOCUSING. The image in the finder accommodates itself to embrace the exact view as the lens is focussed.
- THE ONLY CINÉ CAMERA PROVIDED WITH BUILT-IN DELAYED-ACTION TAKE YOURSELF RELEASE.

- SHUTTER PROVIDES VARYING SPEEDS FROM  $1/25$ th to  $1/1,250$ th SECOND. Invaluable for fast shots and the first time such a feature has been introduced into a ciné camera as portable as the Movikon.

- DIRECT FOCUSING ON FILM THROUGH FILM GATE. In short, the Movikon gives to the Ciné amateur all professional camera advantages.

Of course the Movikon takes any make of film in 50-ft. or 100-ft. spools; is provided with an angle view-finder for round-the-corner work; has a clockwork motor giving an even speed throughout the whole length of the drive; gives single pictures when required, and adjustable film speeds from 12 to 64 frames per second.

The foregoing and many other interesting Movikon features are fully described in our Movikon booklet which will gladly be sent free on request. All high-class ciné apparatus dealers stock the Movikon; name and address of nearest dealer on request.

## ENGLAND'S BUYING CENTRE for MINIATURE CAMERAS SPECIALIZATION.

### MINIATURE APPARATUS.

We are the only firm in Great Britain specialising exclusively in miniature apparatus such as the Leica and Contax. Every miniature camera of distinction together with a full range of accessories is to be seen at our showrooms. Where miniature cameras are concerned, we give the highest part-exchange allowances and pay the best cash prices in the trade. Any type of modern high-class apparatus taken in part exchange.

### PROCESSING.

A new approach to the problem of processing is essential if flawless negatives and perfect enlargements are to be produced from miniature negatives. Appreciating this, we have equipped ourselves exclusively to deal with the miniature negative. We pride ourselves that the results fully justify our policy.

### A SELECTION FROM OUR SECOND-HAND LIST

## Coming—THE CONTAFLEX!

Write for advance particulars.

Last week we described the LEICA MANUAL as "The Leica Owner's Encyclopædia." On second thoughts we feel that this is hardly doing justice to its universal appeal. Rather should we describe it as THE COMPLETE GUIDE to modern photography. Now in stock, price 21/-.

# CITY SALE & EXCHANGE (1929) LTD.

It is supplied complete with all accessories and is fitted with 2-in. lens and 500-watt lamp, giving brilliant illumination. **£60:0:0**

Nine monthly payments of £7.

500-watt resistance. £2 10 0

De luxe carrying-case £4 5 0

Hugo-Meyer Eccentric 1/20 mm. lens for projecting 8-mm. films £4 0 0

## EASY TERMS & EXCHANGES

Anything on nine equal monthly instalments. First payment secures goods. High allowance on your used apparatus in part exchange

## THE NEW IMPROVED ENSIGN 'MAGNAPRINT'

These enlargers give you super speed without loss of quality, due to the perfect system of illumination, whereby the light at its source is concentrated on the lens by a powerful double condenser.

Each model fitted with f/6.3 Ensign lens. For all miniature negatives, enlarges to 15 x 10. **£4:10:0**

As above, but with Dallmeyer f/4.5 lens. £8 17 6

For use with Leica lenses. As above, but without lens, and front adapted to take Leica lenses, including carrier to take 35-mm. film. £4 10 0

For all sizes up to 3 1/2 x 2 1/2. With Ensign f/6.3 lens. £7 10 0

As £7 10s. model, but fitted with f/4.5 Dallmeyer lens. £9 10 0

ANY MODEL ON EASY TERMS!

# LATEST CAMERAS, CINÉ

## NEW SUPER IKONTA

Takes 12 pictures on 3 1/2 x 2 1/2 8-exposure roll film. Distance meter coupled with the focussing. Direct built-in viewfinder. Compur Rapid shutter, speeded to 1/4000 sec. With f/2.8 Zeiss Tessar lens

**£28:5:0**

Nine monthly payments of 68/-.

## 'ROLLEIFLEX'

The all-automatic roll-film reflex. Gets unusual pictures at split-second's notice. What you see on the ground-glass screen you get in absolute detail on your negative. Parallax compensation fully allowed for. With Compur shutter, Zeiss Tessar f/3.5.

**£22:10:0**

Nine monthly payments of 52/6.

- No. 5 Empire Educational Model Cine Projector, conforming to L.C.C. requirements, fitted F/125th h.p. motor, speed regulator, Maltese cross action, spiral gears, square pattern spool boxes, holding 1,000 ft., lamp-house, 30-volt 3 1/2 amps. gas-filled lamp with mirror, resistance and case..... £2 12 0
- 17 1/2-in. Pathoscope S.O.F. Home Talkie, with amplifier and loud-speaker, suitable for any ordinary electricity circuit, complete and perfect. Cost £60..... £52 10 0
- 1-pl. Mahogany Enlarger, first-class obj., 5 1/2-in. condenser, reversing carrier, electric fittings..... £4 4 0
- 3 1/2 x 2 1/4 Compact Enlarger, good obj., 4 1/2-in. condenser, reversing carrier, electric fittings..... £3 18 6
- 1-pl. Miraphot Vertical Enlarger, f/6.3 anas., electric fittings, large enamel dish..... £2 7 6
- 1-pl. T.-P. Reflex, f/2.9 Dallmeyer Pentac lens, 6 slides, F.P.A., L/case..... £14 14 0
- Latest Model I Chromium-plated Leitz Leica, detachable f/3.5 Elmar lens, and case. Un-sold..... £13 17 6
- Model II Coupled Leitz Leica, f/3.5 Elmar L/case..... £18 10 0
- Model III Chromium-plated Leitz Leica, high and low speeds, coupled range-finder, f/2 Summar lens, ever-ready case. As new..... £23 10 0
- Kodak Retina, f/3.5 anas. As new..... £7 17 0
- 3 1/2 x 2 1/4 T.-P. Reflex, f/4.5 Texor anastigmat. lens, 3 slides, F.P.A., L/case..... £5 5 0
- 1a Special Kodak, f/6.3 anas., auto. sector shutter 30s. 0d. Whole-plate Lancaster Field Camera, double ex., revers. back, 3 D.D. slides, L/case..... 30s. 0d.
- P.C. Graflex Reflex, F.P. shutter, double ex., f/4.5 Zeiss Tessar lens, 12-in. Dallmeyer f/6 Popular Telephoto. Cost £50..... £11 17 6
- 6 x 13 Stereo Roll-Heidoscope, f/4.5 Tessar lenses, full-size reflex finder, takes standard 120 roll films, L/case. As new. Cost £54 8s..... £26 0 0
- V.P. Ekakta Roll Film Reflex, f/2.8 Carl Zeiss Tessar, f/6.3 Tele-Tessar, colour filter, L/case. As new £27 10 0
- 6 x 6 Rolleicord, f/4.5 Triotar..... £3 17 6
- 6 x 6 Latest Automatic Rolleiflex, f/4.5 Carl Zeiss Tessar, plate back, 3 slides, pair Proxar lenses, L/case. As new £18 18 0
- Latest 3 1/2 x 2 1/4 or 16-ex. on 3 1/2 x 2 1/4 Stereo Icarette, f/4.5 Carl Zeiss Tessar lens, D.A. Compur shutter, with case..... £15 17 6
- Latest 3 1/2 x 2 1/4 All-metal Nagel Folding, double ex., f/4.5 Carl Zeiss, Jena, Tessar lens, D.A. Compur shutter, 3 slides, F.P.A., L/case. As new. Cost £12 17s..... £6 15 0
- 1-pl. Pressman Reflex, revers. back, F.P. shutter, f/4.5 Aldis anas., 4 slides..... £4 18 6
- 1-pl. Ensign Vertical Enlarger, f/6.3 anas. lens, electrical fittings..... £9 9 0
- 1-pl. Ica Ideal, double extension, f/4.5 Zeiss Tessar, D.A. Compur, 3 slides, F.P.A., leather case..... £3 9 0
- 1-pl. de Luxe Enlarger, all-way carrier, f/4 obj. 5 1/2-in. condenser, electrical fittings, enlarging easel..... £7 7 0

## FILMO STRAIGHT '8'

THE SMALLEST CINÉ CAMERA IN THE WORLD

Daylight-loading. Takes 30-ft. spools of film. Built-in exposure chart, 4 speeds. With T.T.H. f/2.5 lens..... **£19:15:0**

Nine monthly payments of 46/1.

## NEW ACFA MOVECTOR DOMESTINO

Economical in first cost and running cost. Extremely simple in operation. Easy threading and compact in design. Takes 400-ft. reels of 16-mm. film. Built-in resistance, special cooling device, and rigidly attached motor. 100-watt lamp and 50-mm. projection lens **£17:0:0**

Nine monthly payments of 39/8.

## ENSIGN PROJECTOR

Fitted with 300-watt 6-coil single-plane matched filament lamp with matched reflector and condenser. For 16-mm. films. Operates on all voltages 100-250 (A.C. or D.C.). Compact and portable. **£29:10:0**

With 100-watt lamp.

**£17:10:0**

Nine monthly payments of 68/10 or 40/10.

**FREE CATALOGUES** sent post free from any of our branches. One catalogue is packed with bargains—the other contains all the latest apparatus with full specification. Get them now!

## EVERY CONCEIVABLE PHOTOGRAPHIC REQUIREMENT CAN BE MET BY CITY SALE

## YOU CANNOT DO BETTER

### ALL OUR SHOPS ARE LEICA SHOPS

#### The LEITZ "FOCOMAT" ENLARGER

With Automatic Focusing.  
Takes the standard 5-cm. focus Leica lens, screw-in fitting, automatic focusing adjustments scaled from 2 diameters up to 10 diameters. Will take negatives 18x25 mm., 24x36 mm., 3x4 cm., and 4x6 cm. Metal masks can be supplied for any of these sizes.

**£16:6:6**

Nine monthly payments of 38/1.

#### LEITZ VALOY ENLARGER

**£9:11:6** Nine monthly payments of 22/4.

#### £5 REDUCTION!

#### A BRAND NEW ZEISS IKON IKONTA

Six  
pictures  
3x2 in.  
for ten-  
pence.

F/4.5 Zeiss Tessar Anastigmat, ring control Compur shutter, speeds 1 to 1/300th sec., T. and B. Lens focusing. Self-erecting front. Brilliant reversible and direct-vision finders. Complete in maker's box with instruction book and wire release.

**Special Price £5:7:6**

Nine monthly payments of 12/7.

#### THE NEW VOIGTLANDER BESSA

Takes 8 pictures 3½x2½ or 16 pictures 2½x1½ on standard 3½x2½ roll films, 620 or 120 size.

New design base-board which ensures perfect rigidity. Unique trigger release fitted under the baseboard. Supplied in 8 models.

#### PRICES:

F/6.3 Voigtar anastigmat, Pronto 3-speed shutter..... **£3:12:6**

F/4.5 Voigtar anastigmat, Pronto delayed-action 3-speed shutter.. **£5:7:6**

F/4.5 Voigtar anastigmat, delayed-action Compur shutter, speeds 1 to 1/250th sec., T. and B. .... **£7:5:0**

Nine monthly payments of 16/11.

Vol. LXXX. No. 2453.

WE ventured hesitatingly into a little circle of pictorialists the other night who were discussing the exhibition trophies of the year, and it was a comfort to find that work which one of them would condemn as hopeless another would praise up to the skies. The one thing which pictorialists will lack for evermore is unanimity. It came out particularly with regard to a picture entitled "Cattle Tracks," by J. B. Eaton, which was shown at the recent R.P.S. Exhibition. One member present could find little good to say of it; he declared that the foreground spoiled the mid-distance, also he was not sure that they were cattle tracks at all; they might be just cracks in the earth. But another worker declared it to be the most original and the finest landscape seen for years, and another that for simplicity and beauty from very slight material it had never been excelled. Mr. R. H. Lawton, who has a deft hand in sprinkling pepper, was the critic of the occasion. To his remark concerning one picture that he had never seen a sky like that someone reminded him of Turner's famous riposte, "Don't you wish you had?" But Mr. Lawton was not going to be turned upon the spit of a quotation. "No, here," said he, "Turner would have agreed with me. He would have said, 'You are quite right, Lawton, quite right, my boy!'"

## What the Critic Fancies.

Those whose work has been the subject of written criticism must often have wished to turn the tables and "slate" the critic, but the critic maintains a secure isolation and by simply refraining from producing work of his own presents

## TOPICS of the Week

A NOVEMBER DAY IN REGENT STREET.

*An article on "Wet-Day Photography" appears on another page in this issue.*

no vulnerable spot. But we did hear, the other day, what a worker thought of a critic, and, as it happened, the criticism had been, not of the devastating sort, but, on the contrary, most laudatory. The photographer on whose work so many encomiums had been pronounced, and whose picture was said to indicate such careful attention in this, that, and the other direction, and to show such particular skill in omitting one thing and including another and balancing the whole—the photographer simply said that he had never thought of the many things the critic supposed him to have in his mind. He had not been careful or troubled at all, he had not weighed and pondered the matter, he had simply waited for half an hour until a satisfactory figure came round the corner! That is very cheering, in a way, and an antidote to the depression which must seize some workers when they read criticisms which suggest that in making a picture they ought to think of a thousand things. Perhaps the best kind of composition is not that which comes as the result of a laboured and studied performance, but flashes into place as a result of some sort of instinctive selection.

## Reproductions in Print.

We know that many readers cherish the pictorial reproductions which appear in these pages, and that they give a thought sometimes not only to the happy catch of the photographer but to the skill and care of the reproducer, whereby they have as faithful a representation as possible (at all events until new processes arise) of the intention of the original artist, and multiplied by many thousands of copies. At

the same time, it does need to be borne in mind that something is inevitably lost in reproduction. This is the case even with a photogravure process and on the best art paper. In the case of the reproductions of pictorial photographs which appear in papers in general one should always remember that the reproduction is only a sort of mental note to recall the outlines—perhaps little more than the outlines—of the original work. As a rule periodical publication has to be done under considerable pressure, and yet time is a necessary element in reproducing a work of art. Again, there is an ineradicable conviction among British block-makers that everything should be brightened up, and this, from the point of view of the pictorialist, leads to wrong contrasts. Many a photographer whose work has been to him something more than a record must have found his pleasure mixed with bitterness on seeing it reproduced in a newspaper, and have wondered what his fellow

photographers can think of it and him. The writer is happier than the artist, for while the printed picture is a poor copy of the original, the set type is far and away more pleasing than the original script.

### The Lantern Lecturer's Map.

Sir Robert Ball, the famous astronomer, was one of the most popular lecturers with a lantern the world has ever known. When President of the Cambridge meeting of the Photographic Convention in 1902, he was asked by one of the members to tell the secret of successful lecturing. Sir Robert's reply was rather puzzling, as with a merry twinkle in his eyes (he was a great humorist), he replied: "The secret of successful lecturing is to start with either a map or an apology." A correspondent who was at Cambridge Observatory at the time, and heard Sir Robert's cryptic reply, was present a few evenings ago at a lecture on Holland, given in Cambridge, by Mr. George

H. Dannatt. Mr. Dannatt, who may not have heard of Sir Robert's little-known dictum, referred to the absence of a map, saying that in his experience an audience took little notice of a map, and that its only use as a first slide in a travel lecture was to enable the lanternist to get the lantern into perfectly sharp focus!

### More Come to Britain.

The unusually large number of foreign visitors with cameras to London during September last was commented upon by photographic dealers and hotel proprietors, the latter saying that Dutch and Scandinavian camera users predominated. Recently-published figures show that foreign visitors to Britain in September numbered 29,145, of whom 21,241 were on holiday. The number of holiday-makers from abroad for the nine months ending in September was 196,431, an increase of nearly 20,000 over the corresponding period of last year.

## READERS' PROBLEMS

Selected queries on topics of general interest to readers will be fully dealt with on this page week by week. Other replies appear as usual on the last page.

### Salted Paper.

*I have read a brief reference to what was called "salted" paper for prints, and it said that a novice could prepare and use it. The instructions given were not clear. If the process is really practical can you give me the necessary information?*

J. N. (Spalding.)

There are several variations in the method of preparing what is really a printing-out paper, which gives results somewhat like those of the older albumen process. With a little care and experience prints of good quality and pleasing character can be obtained. It is comparatively a cheap process, and has the advantage that any reasonably pure paper can be selected, so that a wide choice of surfaces is available.

Without going into alternative methods and slight variations, we will outline one definite series of operations, so that you should have no difficulty in trying the process for yourself. You should not attempt to sensitise large sheets; about 10 or 12 in. long should be the limit. The prepared sheet is of course afterwards cut up into sizes to suit your negatives.

You will require two special brushes; one flat, and about two inches wide, and the other a hog-hair "stippling" brush. Neither should have a metal mount.

The "salting" solution serves two purposes. It provides a sort of sizing, which prevents the sensitiser from sinking into the paper, in which case the image would be too dull and flat; and it provides the "salt" which will combine with the silver afterwards.

A sizing and salting formula is the following:

Arrowroot .. .. .	190 grs.
Ammonium chloride .. .. .	140 grs.
Citric acid .. .. .	15 grs.
Sodium carbonate .. .. .	30 grs.
Water .. .. .	10 oz.

Rub up the arrowroot into a perfectly smooth cream with the smallest quantity of water possible, and pour slowly, with

constant stirring, into 7 oz. of water which is kept on the boil. Continue boiling till a clear jelly-like solution results. Into this, pour 2 oz. of water in which the other ingredients have been dissolved. Pour into a wide-mouthed bottle to cool.

The sheet of paper is stretched taut by pinning to a drawing-board, and the salting solution applied with the flat brush, giving long strokes first in one direction, and then across. The coating is smoothed by light circular strokes of the stippling brush, till the paper is practically surface dry, when it can be pinned up to dry completely.

Now prepare the sensitiser:

Silver nitrate .. .. .	70 grs.
Citric acid .. .. .	20 grs.
Distilled water .. .. .	1 oz.

This is applied in the same way, and the paper dried in the dark.

As with other printing-out papers, the depth of printing must be found by experience. With most papers a considerable degree of overprinting is necessary, and the negative should be on the "plucky" side.

Before toning, the print should be kept moving, without preliminary washing, for five to ten minutes in a solution of common salt—a quarter of an ounce to the pint. It is then quickly washed, and is ready for toning.

The following weak gold solution is suitable:

Gold chloride .. .. .	1 gr.
Precipitated chalk .. .. .	1 oz.
Water .. .. .	20 oz.

This is well shaken up, allowed to settle, and only the clear part used.

After again washing, the print is fixed in hypo 2 oz., water to 20 oz., to which a little carbonate of soda is added. Fixing is complete in five to ten minutes. The usual final washing is given, and the prints blotted off and dried.

# Dark-room Arrangements

Dark-room work is more in evidence at this time of the year than in the summer months, and it behoves the amateur to spend a little time in arranging and making his work-room a comfortable and pleasant place to operate in.

**C**OLD is undoubtedly one of the first things which affect the photographer's work in the dark-room. On a cold winter's evening it is not surprising that some amateurs prefer the armchair by the fireside, and an interesting book.

But there is no need for the dark-room to be such a cold place, especially in these modern times, when all sorts of heating gadgets are available. An oil heater is quite a handy little asset for the dark-room, and its light can easily be shielded by placing round it a sheet of iron, or, better still, a large oil drum with the bottom and top cut away. This must be raised off the ground in order that air may be admitted underneath, and if painted a dead black will prevent the light from the lamp straying into the dark-room.

This should not, however, be used while panchromatic material is being exposed in the dark-room, when every scrap of light of any kind should be dispensed with. The heater can be placed outside the room for the short time required for filling the developing tank or desensitising, and brought in again immediately after.

Electric heaters there are on the market by the score, and the bowl type is an excellent one for the dark-room, since it needs but little room and gives off quite a decent amount of heat. It should be turned on some time before the room is to be used, and can then, if necessary, be turned out while negative development is in progress and turned on again for the fixing period. The ordinary electric fire will also serve this purpose.

## **Solution Temperatures.**

While on the subject of temperatures, it should be noted that serious variations in temperatures of solutions may occur if some are kept in the dark-room and others are not. This will apply particularly to the washing water, and the

best plan is to stand all the necessary solutions and washing water in the dark-room as soon as the heating apparatus is turned on, and to use only that water and those solutions.

Reticulation will thus be avoided, and also the change of temperature from one room to another which the photographer will experience if he has to keep going out to fetch solutions or fresh water.

## **Dark-room Lighting.**

Many amateurs are still under the impression that the dark-room must definitely be a "dark" room. This is by no means the case, except in the case of developing panchromatic material without desensitising. A comparatively bright light may be used, providing it is a "safe" one. In addition to the standard "safe-light" lamps there are many types on the market, and one of the best is made with three different colours (yellow, red and green), either of which can be used as required, and thus the worker has a universal light for most photographic purposes.

The walls of the dark-room should be kept of a light shade in order to reflect as much safe light as possible. It goes without saying that no direct light should be allowed to fall on the sensitive material employed.

## **Benches.**

The wealthy worker will, of course, have a properly fitted dark-room, but the householder who is making use of a disused coal-cellar or perhaps the bathroom will be confronted with the problem of a surface on which to work. A long deal table is very useful in this respect, and these can be picked up quite cheaply in these days of mass production. This should be given two or three coats of anti-sulphuric enamel, or, if this is unprocureable, Brunswick black or cellulose paint will be found very efficacious. It is essential to wipe up any solutions that are spilt on this surface as soon as possible, especially if they are corrosive.

Boxes can be arranged along the back of the table to take papers, slides, and other impedimenta, but loose bottles are best kept off the table during operations, as they can be so easily knocked off. A shelf on the wall just handy to the position of working will be found very useful for placing bottles which may be required. The edge of this shelf will prove useful for pinning up enlargements to dry, but care must be taken in this case that no solutions are spilt on the shelf, or they may spread to the edge and cause mischief.

## **Labels.**

If, as often happens, the amateur's dark-room is damp, no papers or perishable dry materials should be kept therein. Solutions in well-corked bottles will not come to much harm if the room is not too damp, but the atmosphere will play havoc with the labels.

This can be avoided by the exercise of a little trouble. Chinese lacquer makes an excellent material for labelling bottles. A band of this in some light shade, preferably buff, is painted on the bottles and allowed to harden. The names of the solutions can then be painted on with a fine brush in black of the same material. This shows up well, and will stand the ravages of most things—even acids, if wiped off quickly. The time spent in painting the labels will be more than repaid by the rapidity with which they can be deciphered.

## **The Floor.**

A good thick plain cork linoleum makes an excellent floor covering for the dark-room, and all mats, etc., should be avoided, unless the worker prefers to stand on a thick rubber mat, which is certainly an aid to warm feet. All solutions, water or chemicals spilt on the floor should be immediately wiped up, and on no account left until some other time.

# The GENESIS of an Exhibition Picture

By CLARENCE PONTING.

## ANOTHER EXAMPLE

ON page 348, issue dated October 9th, of *The Amateur Photographer and Cinematographer*, Mr. G. L. Hawkins let readers into the secret of how he produced an extraordinary metamorphosis from what was almost a waste negative, the result being seen in his exhibition picture "Copper Beech and Silver Birch."

to print in a suitable sky, and make an upright picture giving an effect of a wind-blown tree.

This sky would have to be overprinted on to the portion representing water and hills in the original, but doubtless these could be held back whilst printing the tree, to leave an unexposed expanse of paper on which the clouds could be printed. An experimental exposure proved this to be correct. At this stage it was found that a better composition could be obtained by reversing the negative.

A suitable cloud negative was then selected, and the correct exposures found by means of trial slips, after which the combined print was made. It was then found that the trees and margin of the lake formed something rather like a dark group of fir trees but the lines of the shore made two rather light, vertical streaks that ruined the illusion.

*Print from original negative.*

Apparently Mr. Hawkins has considerable skill in the use of brush and pencil, for he has added boughs and foliage to his final print that do not exist in the original, and deleted others which were. To any one with his ability, playing about with negatives and positives in this way must be fascinating; in fact, obtaining such a result from so poor an original cannot help but give the artist a thrill.

I have not yet come across a negative which will give a final print that satisfies me until some little defects have been rectified; but, in my case, I like to work up a good print. In rare cases, a picture can be obtained, which was not apparent when the original negative was made, by combining a suitable sky from another negative; or even a portion of the landscape.

A case in point may be seen in the photographs illustrating these notes. The original was made because the tree, which had fallen across the lake, broke up a large expanse of water foreground, whilst, in the distance, a range of mountains formed an attractive background. Probably I was deluded in the general colour of the scene, for on development the hills had almost vanished, and the trees forming the margin of the lake were devoid of subtle gradation and detail.

A print was made, but this was placed on one side as a failure. Then, one day, I chanced to pick it up by one end, so that the fallen tree assumed a vertical position. I was at once struck with the decorative pattern made by the drooping branches, and wondered if it would be possible

*Second print with sky and distance held back.*

# ENSIGN "PHOTO-GIFT" NOVELTIES

## Practical Suggestions for Christmas

How much more acceptable is the gift that has some personal touch—something which has meant a little actual work on the part of the giver. These Ensign "Photo Gifts" provide the Amateur Photographer with just the right means of conveying a really artistic message of his own creation—and in a really useful form.

### ALL-SIZE CALENDAR

Takes postcard, cabinet, half-plate or  $7 \times 5$  pictures, upright or oblong. Overall size  $9 \times 12$ . Pleasingly finished in multi-tint grey art paper on stiff board with black edge and imitation charcoal lines. Grey ribbon for hanging.

No. 60. Complete in envelope .. 9d.

### POSTCARD HOLDER PHOTO FRAME

A very useful novelty. Space is provided at back for a dozen correspondence postcards while the front is a strong frame taking a postcard print, protected by stout transparent celluloid. Finished in imitation wood veneer paper, oak finish. Strut fitted.

No. N43. Complete in envelope .. 1s. 3d.

### PHOTO PHONE PAD

Another practical gift. Combines index telephone directory and note pad with a frame to take prints up to half-plate, protected by stout transparent celluloid. When the frame is pulled forward directory or pad is ready for use. Total size  $6 \times 7\frac{1}{4}$ . Packed in attractive box.

No. N.40. Mottled brown art paper covering, 2s. 6d.

No. N.41. Multi-tint grey art paper covering, 2s. 6d.

### PHOTO BLOTTER

Everyone needs a blotter. This distinctive photographic blotter has stout board covers,  $9 \times 11\frac{1}{2}$ , mottled brown finish, with dark plate-mark round slip-in opening, which accommodates prints up to half-plate. Picture protected by celluloid. 24 blotting pages. Specially ruled page for addresses and engagements. Bound with art silk .. 1s. 6d.

### MODERN "SILVER" FRAMES

Eminently suited to present-day fashion.

A modern Passe-partout Frame bound in artistic dull silver which harmonizes admirably with modern furnishing fashions and colourings.

No.				Price.

ENSIGN, Limited,  
High Holborn, London, W.C.1

# The film you prefer in the form you prefer -

## KODAK FILM PACKS

REGULAR  
"VERICHROME"  
"PANATOMIC"  
SUPER SENSITIVE  
PANCHROMATIC

When you use Film Packs use Kodak Film Packs. The same fine rich emulsions in the same variety of grades as in Kodak Roll Film are at your disposal.

The metal casing of Kodak Film Packs is strong and rigid; the tabs pull out and tear off easily; each film lies flat in the focal plane.

Kodak Film Packs are easy to handle in the camera and in the darkroom.

## SEE THE ARGUS AND JUDGE FOR YOURSELF

9.5-mm. Precision Movie  
Camera at — THE  
CAMERA COMPANY

*This camera is constructed by world-famous scientific instrument makers, and will undoubtedly meet the requirements of the most exacting Ciné enthusiast.*

In order to introduce the Argus we are prepared to make a **STUPENDOUS ALLOWANCE** on your present outfit. Let us quote you and also send full particulars of this new wonder camera.

### SPECIFICATION:

1. Turret Head.
2. Sprocket Feed.
3. Variable Speeds.
4. Easy Daylight Loading.
5. 100-ft. or 50-ft. Capacity.
6. Power Reverse for Tricks, etc.
7. Single Picture Device.
8. Footage and Spring Tension Indicators.
9. Direct and Brilliant Viewfinders.
10. Die Cast Metal Construction.

WE ARE MAIN WHOLESALE DISTRIBUTORS.  
TRADE SUPPLIED ON USUAL TERMS.

**IMMEDIATE DELIVERY GUARANTEED**

**PRICE:**  
Fitted with 1-in.  
F/1.9 Ross in micro-  
meter focussing mount.  
**32 GNS.** INCLUDING DE LUXE  
LEATHER CASE.  
Yours for 88 9 down and 11 similar monthly payments.

HOURS OF BUSINESS 9 A.M. TO 7 P.M.  
MONDAY TO SATURDAY

Had I possessed the skill of Mr. Hawkins, I should have made a transparency of the landscape negative, deleted these light portions with a reducer, and drawn in some suitable pine foliage. This being beyond my ability, I had to do the next best thing, which was to darken the lines on the print by means of oil pigment, until they matched the rest of the surroundings.

I am afraid that critics will say that this block of unrelieved darkness is too heavy; it is. On the other hand, numerous photographers have seen the finished print, and not one has remarked on this rather obvious fault. Neither has any one observed that the tree was not growing in the position it appears to indicate. In fact, one critic, when I mentioned that the negative was taken in Scotland, was kind enough to remark that "of course, you can get such wild scenery there."

However, I show my result as I have made it, in the hope that it may interest other readers. Mr. Hawkins, I know, would have deleted the small, ugly piece of firewood which projects towards the dark portion on the left. Probably, in the near future, I shall see what I can do in this direction. I have never tried working up an exhibition print by working on a positive, but, thanks to Mr. Hawkins' notes, I now have some idea as to the methods employed.

## A SIMPLE WASHING TIP

By F. W. MAUND.

TO those who have to wash prints, etc., in ordinary household sinks, wash-basins, or baths, the problem of adequate washing is not so simple. The shape of most sinks is not conducive to good circulation of water, and the running off of the waste from the bottom of the sink at the right speed is not easy. The fitting described overcomes these difficulties and is both cheap and portable, and a great boon to travellers who have to wash in all sorts and types of sinks.

The gadget consists of a short length of water or gas pipe, bent into a U shape, about four or five inches high, one limb of the U being about half an inch longer than the other. This longer limb should be fitted into a hole made in a spare rubber vent plug, which may be bought for a few pence at any ironmonger's. The whole arrangement is then fitted into the waste vent of the sink as shown in the diagram. Now, on turning the tap on, the water in the sink and in the short limb of the U rises until the top of the U is reached. Water then flows through the U tube down the drain, starting a

WIND BLOWN. *The finished picture, made as described in the article on the preceding page.*

syphon which draws all the water from the sink. The emptying of the sink breaks the syphon, and the whole process begins again. Thus the sink is repeatedly emptied and filled with fresh water.

A little wire guard should be fitted over the short end of the U tube to prevent prints being sucked over the opening. The tap should be turned on to give a steady gentle stream, or a short length of tube fitted to prevent the falling water damaging the prints.

Should the syphon fail to break when the bowl is empty, due to water running in as fast as it runs out, the tap should be turned down or a small V, about a quarter of an inch deep cut in the open end of the U tube.

It is not recommended that the washing time should be reduced when using this method, but if time is short, it is interesting to note that postcard prints washed for half an hour, the bowl filling and emptying in five minutes, showed no trace of hypo.

November 13th, 1935

# WET-DAY

By D. SWAINE.

*After a shower, Piccadilly Circus.*

*A busy corner. F/3.5, 1/50th sec.*

**F**EW photographers can have failed to admire reflections on wet surfaces, and have possibly made an exposure from time to time. But why not undertake a deliberate expedition for the purpose of making a series of wet-day studies? It will prove worth while if entered into in the right spirit.

Suitably clothed and shod, one should tour the main streets and squares, taking advantage of such sheltered points as shop fronts and doorways, hotel canopies and public shelters. Naturally, if a companion can be pressed into service for the purpose of sheltering photographer and camera there need be no limitation as to the position to be taken up. But the pavements and roads must be thoroughly wet for the type of picture I have in mind; it is useless to go when they are drying.

It will be found that the smoothest asphalt makes the best reflecting surface when wet, and since buildings and figures, together with their reflections, will be dark, it follows that they must

*Any more? F/4.5, 1/25th sec.*

be contrasted against unshaded roads and paths. This means that wide streets and open squares will best provide the required conditions, and at the same time enable the photographer to keep his exposures short. There is something very fascinating about a snake-like reflection, and these, it will be seen, are the result of uneven ridges and potholes which pass unnoticed in dry weather.

Since no photographer will want his precious instrument to get thoroughly soaked, the less time this is in the open the better, so that an easily pocketed camera is required for wet days. Enthusiasts who are also cyclists will find that there is nothing more useful than the oilskin cape which is normally worn under such conditions:

# Photography

## STREET SUBJECTS AND REFLECTIONS.

the camera can be protected when not in use, and need not be shut up. This is particularly convenient, since a lens hood must be fitted in order to protect the lens from rain-drops, and where one's camera has to be closed for the raincoat pocket the constant fitting and removal of the hood may be somewhat trying when fingers are wet and cold.

This is certainly a phase of outdoor photography which must be undertaken with a camera having a large lens aperture; but most miniatures have at least  $f/4.5$ , and this should prove sufficient for the majority of exposures at  $1/25$ th sec. But where it is required to take moving figures closer to the camera than 40 ft., the combination of  $f/3.5$  and  $1/50$ th is necessary to ensure absence of blur.

Naturally, the sky is so overcast that it is only the amount of reflected light present which enables one to snapshot even at this aperture. There is, however, plenty of detail to be picked out even from dark-coated figures, and one should never make the mistake of believing that the wet pavements

*Shopping.  $F/3.5$ ,  $1/50$ th sec.*

*Whitehall on a wet night.*

and reflections alone will make a satisfactory negative. Always expose for the object and let the surroundings take care of themselves.

Where it is desired to include the full reflection of a tall building or a figure close to the camera, it must not be overlooked that the extremity of this will approach very close and may be badly out of focus. Since it is not practicable in this work to obtain sharp definition by stopping down, the remedy lies in keeping well away from the subject and then enlarging the essential portion. A slight loss of quality at the lower end of a reflection does not matter, it is natural,

but when using a large aperture one must take care that there is not a decided falling off from about half-way down.

Another reason for keeping a good distance lies in the fact that there will be a tendency to tilt the camera downwards in order to obtain a full reflection, and this causes a distortion of the verticals which will be very noticeable, because railings, house ends, etc., are likely to be fairly close to the camera. Fast panchromatic films or plates (backed) will be found most satisfactory for this work.

*An umbrella parade.*

# NEWS AND REVIEWS

ITEMS OF GENERAL INTEREST FROM ALL QUARTERS.

The new secretary of the Bournemouth Camera Club is Mr. Frank Day, of 15, Bryanstone Road, Bournemouth, who will be pleased to send particulars to any one interested in the club. All interested in photography, whether beginners or advanced workers, are welcome.

Readers in the Birmingham district who are interested in ciné work should note that the Birmingham Photographic Society has a ciné section which meets regularly every Wednesday at York House, Great Charles Street. All communications to the Hon. Secretary, Mr. D. Royce, "Thorne," Frankley Beeches Road, Northfield, Birmingham.

We are asked by Thames Ciné Products Ltd., to announce that the "Argus" 9.5-mm. ciné camera, to which reference was made last week, is manufactured by them. Dealers should apply to them for further particulars. Their address is: Argus Works, London Road, Ashford, Middlesex.

An interesting junior projector for 9.5-mm. films has just been placed on the market by the makers of the well-known "Alef" projectors. Although it retails at the modest price of 30s., including bulb, special take-up spool, and flex, it is surprisingly efficient and well constructed. No resistance or transformer is needed, as a special bayonet type bulb is supplied for all voltages. On test, with an average-density film, a good brilliant picture 30x20 in. was obtained on a silver screen, and although the shutter consists of a simple double-bend flap, the projection is remarkably steady. It is gear driven with a spring-belt friction drive for the take-up spool, which is large enough for 80 ft. of film, and a special fitting for rewinding is also included. Illumination is provided

through a single lens condenser and focussing by means of a sliding lens-tube. It is finished throughout in crystalline black and nickel-plating. Agents for this country are Luminos, Ltd., 22, Bartlett's Buildings, Holborn Circus, London, E.C.4.

The Hon. Secretary of the King's Heath and District Photographic Society has asked us to note a change of his address, which in future will be Wayside, 37, Hazelhurst Road, King's Heath, Birmingham, 14.

A new photo-electric exposure meter with special features that will place it in the front rank of these useful accessories has just been announced by Ilford Ltd. It will sell complete in case at £3 3s. We will have more to say regarding it after we have had an opportunity of testing it. In the meantime readers should apply to their dealers or direct to Ilford Ltd., Ilford, for the Selo Speed Number Table. This takes the form of a convenient-sized card giving a list of all the Selo films, with comparative speed readings for DIN, Scheiner, H. & D., Weston, Burroughs Wellcome and Justophot. A most useful table for all practical workers. It is supplied free.

In reference to a recent reply to a correspondent, published in these pages, Messrs. Agfa, of 1-4, Lawrence Street, W.C.2, inform us that the Agfa silk sponge mentioned is made by Firma I. G. Farbenindustrie, A. G. Berlin. They also draw attention to a special Agfa film-wiper fitted with detachable viscose sponges. Further particulars will be supplied on application to Messrs. Agfa, address as above.

**Stolen.**—Mr. F. V. Farnsworth, of 13, Beech Avenue, Sherwood Rise, Notting-

ham, has had his camera stolen; a brand new Rolleicord, f/3.8, in ever-ready case, lens No. 1622712. It was taken from a private car standing in Ebers Road, Mapperley Park, Nottingham, on November 3rd, between 5 and 7 p.m. Any one who can give information regarding the camera should write to the above address or to the Nottingham C.I.D.

An exposure notebook for amateur cinematographers has just been put on the market by Ensign, Ltd., 88-89, High Holborn, W.C.1. It is called the Ensign Ciné Shot Record, and is a well-made little booklet of 50 perforated pages with ruled spaces for 400 separate entries. The particulars noted are "Date, Stop, Filter, Film, Footage, Description, Remarks, No. of Shot." Every serious ciné worker should get a copy. It costs ninepence.

While the epidiascope has long been appreciated for its adaptability for projection purposes, its comparatively high initial cost has prevented most people from using them more often. With the introduction of the K.W. Episkop at the moderate price of £5 15s. there should now be a popular demand for this useful apparatus. On test, the K.W. Episkop projected any picture, black-and-white or coloured, or flat object up to 3½ in. square on to a screen to as many as 16 diameters with good brilliance. Operating on the usual reflected light principle with a 100-watt bulb, it is fitted with an f/32 anastigmat projection lens of 5.3-in. focus and rack and pinion focussing on to a silver-surfaced mirror. With an instrument of this value which requires a fair amount of handling, the question of overheating has been well considered. The ventilation is excellent and all the sides are lined with asbestos. While the Episkop can be placed on any book or object, two different carriers are supplied, together with suitable heavy metal masks. Special 100-watt bulbs are available at 5s. each. The sole agents for this country are Sands Hunter & Co., Ltd., 37, Bedford St., Strand, London, W.C.2.

## Exhibitions and Competitions

CURRENT AND FUTURE.

Notices of forthcoming exhibitions and competitions will be included here every week if particulars are sent by the responsible organisers.

The Amateur Photographer Monthly Competitions for Beginners, Intermediate and Advanced Workers.—Entries, November 30. Rules in issue of October 30.

Seventh Western International Photographic Salon.—November 23-30. Organising Secretary, W. H. Hill-Muchamore, 24, Church Road, Redfield, Bristol.

Cape of Good Hope International Salon (under the auspices of Cape Town P.S.).—Entries due, November 19; open, January, 1936. Hon. Salon Secretary, Richard Dekenah, P.O. Box 2431, Cape Town, South Africa.

Ike International Kertsalon Fotografische Kring "Iris".—Open, December 22-January 5, 1936. Entries close, November 15. Particulars and entry forms from J. Van Dyck, Secretary, "Iris," 69, Ballaerstraat, Antwerp.

Third (Second International) Wilmington Salon of Photography.—Open, January 6-26, 1936. Last day for entries, December 15, 1935. Particulars and entry forms from the Salon Committee, Delaware Camera Club, P.O. Box 818, Wilmington, Delaware, U.S.A.

Leicester P.S. International Exhibition.—Entries, January 24, 1936; open, February 24-March 7, 1936.

Exhibition Secretary, H. Foscutt, 19, Doncaster Road, Leicester.

Preston Scientific Society.—Eleventh Annual Open Photographic Exhibition. Monday, February 3 to Saturday, February 15, 1936. Entries close Friday, January 10, 1936. Particulars and entry forms from the Exhibition Secretary, F. Wells, 65, Powis Road, Ashton, Preston, Lancs.

The 40th Annual Exhibition of the South London P.S.—Open, February 15-March 14, 1936. Entries close, January 21. Further details and entry forms from Hon. Exhibition Secretary, H. S. Adams, 40, Stockwell Park Road, London, S.W.9.

Scottish National Salon.—February 8-29, 1936. Entries close, January 11. Particulars and entry forms from the Hon. Salon Secretary, Norman G. Brown, 36, North Lindsay Street, Dundee.

Ilford Photographic Society.—Annual Photographic Exhibition. From Monday, March 2 to Saturday, March 7, 1936. Closing date for entries, Saturday, February 1, 1936. Particulars and entry forms from E. G. Roughton, 63, Havering Road, Romford, Essex.

City of London and Cripplegate Photographic Society.—Thirty-first Annual Photographic Exhibition

from March 16-21, 1936. Entries close, February 10, 1936. Particulars and entry forms from the Hon. Exhibition Secretary, A. C. Mundy, 11, Monkham Lane, Woodford Green, Essex.

Ville Salon International D'Art Photographique de Bruxelles, 1936.—Open from March 21-April 5, 1936. Entries close, February 25. Particulars and entry forms from M. M. Devaivre, 152, Rue Markelbach, at Brussels 3, Belgium.

Darwen Exhibition of Photography.—April 20-May 2, 1936. Entries close, March 19. Particulars and entry forms from the Secretary, J. H. Woods, South Down, Bolton Road, Darwen.

Bristol Photographic Society.—Second Annual Open Exhibition, from May 2-19, 1936. Entries close, March 28. Particulars and entry forms from the Hon. Exhibition Secretary, Percy V. Cave, 36, Coldharbour Road, Redland, Bristol, 6.

Sunday Referee Weekly Photographic Competition.—£10 offered every week for the best picture published. See Sunday Referee for full particulars.

I Internationale Kunstphotographische Ausstellung in Karlsbad.—Open from July 18-August 9, 1936. Entries close, June 18, 1936. Particulars and entry forms from Mr. Hugo Heyer, Schulgasse 26, Karlsbad.

# How I make my EXHIBITION PICTURES

Methods and Ideals of well-known Pictorial Workers.

No. CCCVII.

CONSTANCE  
BLAXALL.

From information communicated to our Special Representative.

"IT might be said of exhibition prints, as of the old recipe for jugged hare, 'first catch your exhibition negative.' I had almost said exhibition 'subject,' but a glance round one of our more important shows will at once dispel any idea that there is such a thing as an exhibition subject. Everything is suitable material to the camera enthusiast. And, speaking of cameras, I imagine that a reflex or something with a similar viewing device is essential to serious work, and furthermore a camera to which one has become thoroughly accustomed.

"Having then secured a negative which seems to offer hopes of a good print—the kind which inspires that

critical look in the eye of our expert friends and awe in that of the button-pushers—a grade and shade of paper must be decided upon. I generally use one of the rough-grained, well-known makes of normal grade, and employ the developer recommended by the manufacturers, on the assumption that they must know much more about their own papers than I do. I follow the well-beaten track of taking test strips, and keeping the developer, etc., at 65 degrees. I generally give a slightly longer exposure with cream-base papers than for the same subject on white; otherwise, it seems in my experience that one is so apt to get that bald, unsatisfactory appearance in the high-lights.

"When the prints have been washed, I have a good look at them and decide if a touch or two of potassium ferricyanide would work an improvement in breaking up a too dense mass or in emphasising a high-light, for instance. This is the best time for applying this somewhat temperamental reducing agent, and if any one gets any stains, he need not write to me about it, for so far I have not made any myself by this means. I apply it with a piece of cotton-wool or a small brush, and as ferricyanide is given to an arbitrary swiftness at times, it is essential to have a second larger piece of cotton-wool soaked in water to wipe off the reducer at the crucial instant.

"In the cold light of morning, when the prints are dry, they look far from exhibition standard as a rule; but to my mind the really fascinating process now begins, when I get out my drawing-board, oils, brushes and pigments for the final polish. I apply in the well-known way a mixture of copal varnish, linseed oil and turpentine very sparingly, and then rub off as much as possible. For spotting and work of small extent I find lamp-black water-colour (however unorthodox this may seem) quite effective for white-base paper, and the same colour with a little indian ink for cream-base paper.

"When the print is finished, I find it a good plan to put it on a mount (unstuck) with a sheet of glass clipped to it, and put it in a place where I can see it. By this means faults which have escaped one at first may become apparent, and if at the end of the week my husband can still bear the sight of it, there is a probability that the judges may not shudder at it either."

(A further example of Mrs. Blaxall's work is reproduced on one of the centre Art pages.)

PASTURE SHRINE.

Constance Blaxall.

# Pictorial Analysis

Every week the picture reproduced on the art page opposite will be analysed in detail for the benefit of readers of the paper who are seeking to improve their pictorial work.

"MISCHIEF," by Basil Bailey.

HIGHLY attractive is this spontaneous rendering of a youngster in a most engaging mood. It is an excellent piece of work, and, as a portrait, it is interesting partly on account of the intriguing personality of the child, and, to a not inconsiderable extent, on the way that personality is presented.

It is, of course, an innate characteristic of the model, but that it is made evident in the picture and shown in an acceptable manner is attributable to the competence with which it has been caught and rendered, and the skill of the artist in making it apparent. The feeling of spontaneity is a marked feature. It leads to the inference that either the subject was found as it appears and taken immediately without premeditation, or, if prepared beforehand, the confidence of the subject was first secured; the subject allowed to pose itself; the expression induced; and, just at the psychological moment, the exposure made.

In the nature of things, the former alternative is not very likely, for subjects so ready made rarely occur, and, when they do, the camera is either missing or not prepared for an immediate exposure. It is far more probable that there was an efficient preparation beforehand and that the second method of procedure was adopted. Its success is self-evident, but the same completeness extends to the arrangement of the composition, much of the power of which is attributable to the placing of the head (1) in the picture space. Its position happens to fall on one of the familiar points of intersection formed by divisions of thirds, or, put in another way, it is sufficiently distant from the top and left-hand edges to avoid any suggestion of weakness, and so far removed from the centre that no impression of formality arises. This, alone, is a source of strength and would enable the figure to maintain its attraction without any further aid.

But the lines of the figure suggest a triangular shape, or what is known as a pyramidal formation—indicated in the sketch by dotted lines—and this, again, provides an accession of strength.

Another factor of some moment is that the lights composing the features are among the brightest of the picture. They are surrounded by the darks of dress and hat, and the comparative

composition seems eminently satisfactory and well contrived.

It will no doubt be noticed that the figure is very clearly and sharply defined. There is no attempt towards the introduction of diffusion or even a hint of softening of line, nor does it seem that any advantage could thereby be obtained. This was a feature that was noticeable in most of

the other portraits shown at the recently held exhibition of the London Salon of Photography, and illustrates the modern trend.

Possibly those who advocate the employment of soft-focus lenses, diffusion devices, and the like, would be inclined to object to the way the detail of the background is shown, particularly on the left of the figure, and would say that it would be preferable if the whole of the setting were rendered with the lack of sharpness that occurs in the more distant right-hand portion; but the contention could scarcely be sustained, for it is not the way the setting is defined that is important, but its tone, and that would not differ greatly whether it were sharply or softly registered.

The main thing is that the figure should be perfectly rendered and that the setting should not obtrude itself unduly. No diffusion in the figure or softening of line could improve upon, or appreciate, the present rendering, and, if it could be wished that the delineation of the

setting were uniform, such a consummation is not possible when lenses of large aperture are employed.

For such subjects as this they are undoubtedly necessary, but, so long as the tone of the setting is fairly uniform and not assertive, it is immaterial whether the sharpness with which the main element is rendered extends to the setting or not. The portrait is the thing, and that it is admirably conceived and finely executed is demonstrated by the picture itself.

"MENTOR."

extremes of tone in conjunction attract a great concentration of interest, particularly in view of the fact that there are no equivalent contrasts elsewhere, the setting consisting of a moderately deep half-tone in the main, with a few heavy darks in the lower portion.

Such an arrangement of tones tends to localise the interest in the face, quite apart from the fact that it naturally attracts the first share of the attention. The figure is well isolated from the setting, and the

# PICTURES by Novices

## SOME CRITICAL COMMENTS on the Beginners' prints reproduced on the opposite page

LOOKING down at things, if the device is not persisted in to the stage when it becomes an obsession, often presents an aspect of a scene that has elements of novelty, and the added interest that accrues not infrequently lends a pictorial attraction to a subject in which it would otherwise be lacking.

### Looking from Above.

A case in point is No. 3 of the prints reproduced on the opposite page—"The Great Wall of China," by the Rev. A. W. Malony—where the impressive mass of one of the towers stands out against the light tones of the widespread distance.

The contrast between its dark depths and the brightness of the plain beyond makes a satisfying arrangement of considerable force, and one which would not arise—at least, so forcefully—if, instead of being directed downwards, the camera had been held at the normal level. The subject has been very well seen, and the technical presentation is above reproach, but it might be as well if a small amount—say three-eighths of an inch—were removed from the right-hand side.

By cutting off the dark along that side and removing the portion of the wall approaching the viewer, the tower is more effectively isolated, and, besides, its position in the picture space is improved. It is removed, proportionately, to a placing that is more off the centre, and assumes a more pleasing relationship with the rest.

These, however, are somewhat minor points, although their adoption is necessary to show the subject to the best advantage, the main thing about it being the placing of the dark tower against the distant light, and the downward inclination of the viewpoint that has made it possible.

### Skies and the Print.

The choice of the normal viewing level, here, would involve the inclusion of the sky, and with it would come a complication and possibly a loss of concentration.

A blank area of sky is seldom agreeable to look at and it generally means a lessening of the interest that should attach to the subject beneath. No. 2,

"A Beach Scene at Kotung," by F. Broomfield, provides an example. The print is rather washy, it is true, and this does not help matters, but, instead of the landscape attracting the attention, the eye immediately jumps to the brightest light, which happens to be the sky, and does not notice the rest.

If a higher viewpoint could be found from which the subject would make up acceptably as a foreground study, the sky being excluded, it is probable that the result would show an advantage over the present rendering.

The experiment is one that might well be tried, but, with the existing impression, it would be wise to try the effect of a more vigorous grade of paper, and to introduce a measure of tone in the sky by a little local extra printing towards the top.

### Luminosity and Light.

There need be no fear of any loss of luminosity, as is well demonstrated by a comparison with No. 1, "Peaceful Evening," by T. C. Hogg, where the sky tone is not only appreciably deeper but characterised by a praiseworthy measure of gradation.

From the point of view of arrangement, the boat would be better placed if it were more "in" the picture—half an inch to the right would be sufficient—for its present position, so near the left-hand edge, is rather inclined to weakness. In a case like this the sky is a valuable feature, and it would be most undesirable to attempt to treat the subject by any other than normal means. A high viewpoint directed downwards would seem anomalous and the attraction now present would be destroyed.

Similarly, with No. 5, "September Cumulus," by E. C. Milner, any deviation from the existing viewpoint would be unlikely to afford any advantage. The sky, here again, is a good and useful feature, its tones are excellent, and the inclusion of the figure serves to set them off.

It will, nevertheless, be noticed that there is something of a suggestion of too great an approach to symmetry arising from the fact that the two tops of the clouds are at more or less

equivalent distances from their respective edges.

### Position and Placing.

The tendency would be entirely avoided by trimming a quarter of an inch from the left, which would give the summit of the cloud on the right the dominance, the other falling into secondary significance.

The placing of the clouds would be considerably improved and the position of the figure would scarcely be adversely affected. The adjustment is therefore recommended. In the case of No. 6, "The Way of Light," by O. K. Rose, both landscape and sky are no less well recorded, the sky tones being particularly attractive with their soft yet finite gradations; yet the print is not wholly satisfactory.

The proportions of landscape to sky cannot very well be altered, for they are just about right as they stand. The light patch of tone towards the top, however, impairs the feeling of luminous quality, and draws the attention away from the light at the horizon where the interest centres. Trimming three-quarters of an inch from the top removes the disability, but also spoils the pictorial proportions, and, on the whole, it cannot be recommended. In these circumstances, a little extra printing towards the top offers the only solution, and, if carefully done, should not introduce any suggestion of falsity.

### A Sunny Suggestion.

No. 4, "Look! my Dear," by A. Pitman, is different from the others in that it is primarily a figure study. It is natural and spontaneous, and the two women are very well caught.

The print is very sunny, and this feeling lends an added artistic attraction. Possibly the figures are shown on rather a large scale for the setting, and a little more of the latter would be advisable. A shadow along the baseline, too, would help the suggestion of sunlight; but, for all that, it is a good piece of work and a decidedly lucky shot. Opportunities for subjects of similar nature abound in both town and country, and, when nothing else is in view, a few hours spent in looking for them may prove profitable and enjoyable.

"MENTOR."

# With the Beginners

## NOTES AND NOTIONS FOR THE LESS ADVANCED WORKER

Every week an article will appear under this heading dealing with a topic of interest to the novice in photography.

### DEVELOPING A FILM PACK.

WHEN film packs were first introduced I contented myself for a long time by watching my friends use them, and listening to the language they inspired. Then I noticed that the language gradually became more moderate and respectable, till it ultimately developed into praise, and the countryside was strewn more thickly with black paper tabs. My own experience with the packs was not always happy, and often exasperating. They were capable of the meanest tricks imaginable.

To-day I use more film packs than any other kind of sensitive material, and my only objection to them is their relatively high price.

As promised, I will describe my own method of development in detail, but feel sure that many beginners will consider it unnecessarily fussy.

#### Breaking the Pack.

It always gives me a pang to break open a pack and throw away the beautifully-made case. But I do it, and put the twelve films ( $3\frac{1}{2} \times 2\frac{1}{2}$  or quarter-plate) into a  $5 \times 4$  plate box, from which they are taken two at a time. I always develop in twos, and I prefer to be able to give longer or shorter development, according to circumstances. That is why I do not use a tank.

#### Developing.

My developing and fixing dishes are half-plate size. Not only are they of different coloured xylonite, but the first has one notch in the rim, and the second two; so that I am never in doubt as to which is which.

In the first dish I put enough developer to cover the films easily, and the number of films I put through it depends on what developer I am using. I have a piece of thick card to cover the dish, and on this I put the two films, face down, so that the backing-paper protects them. Before development the backing-paper is gently torn off.

I then grip this edge of the film with vulcanite forceps (better than metal) and drag the film backwards and

forwards through the developer, till it will lie flat. Then I do the same with the second film, which meanwhile has been held face down on the card. The two films lie side by side in the dish, which is covered and rocked. Presently I take a peep to see what is the subject of each film, so as to develop accordingly. I know the normal time of development pretty well, and do not have to keep examining the films.

#### Fixing.

When I consider development complete I rinse the films in a  $12 \times 10$  dish of water, and put them side by side in the acid fixing bath. Here they remain while I develop the next two films, which ultimately go over the others in the fixing bath. Then I draw out the first two, examine them in a good light, and put them back in the same position, although fixation is probably complete.

Just before I am ready to put another pair in the fixing bath, I draw out the bottom two and transfer them to another  $12 \times 10$  dish of water. So there are never more than four films in the fixing bath.

#### Washing.

Ultimately, all the twelve films are in the dish of water, ready for washing. I drain off the water, and put the dish under an anti-splash tap. The stream of water is allowed to fall on the sloping side of the dish, and with a little practice it is easy to make the films circulate in the dish without their turning over. After a round or two the tap is turned off and the films allowed to soak.

The process is repeated many times—drain, swirl, rest; drain, swirl, rest. During the rest intervals I wash the other dishes, and the graduates, and put them away, except the other  $12 \times 10$  dish.

#### Cleaning and Hardening.

This other dish is replenished with clean water. I get a plug of cotton-wool and well swab one of the negatives under the water in the first dish,

taking special care to clear off every trace of the adhesive at one edge. I regard this as of great importance. Soon all the swabbed negatives are in the second dish, where they are treated once or twice to the drain, swirl, rest.

Now the whole batch is transferred to a dish of formalin—one ounce of formalin solution to nine ounces of water—and kept moving for about three minutes. This thoroughly hardens the gelatine. Then they go back into water, but no further washing is necessary. The formalin solution can be used repeatedly.

#### Drying.

I now take a half-plate sheet of glass, and a piece of chamois leather. The latter is soaked in water, wrung as dry as possible, and made into a smooth, flat pad. The rinsing and wringing must be repeated frequently.

A film is laid face down on the glass and the water rubbed off with the leather pad, from middle to edge one way, and the same the other way. Then the negative is turned over, and the film side treated similarly. There is no soft gelatine, and no adhesive. When the film is slid off the glass it is clean, and there are only minute globules of water on the surfaces, and these soon vanish.

I stick a glass-headed push-pin through the top left-hand corner, and pin the film to the edge of a wooden shelf. Why the left-hand corner? The right-hand one will do as well, but it should always be the same one, or the films will not all hang the same way, and then they take more space. As I take the dry films down I snip off the corner where the pin has been. More fuss? Well, you can leave the corner on, till you realise how deadly the hard burr can be, and then you will remove it.

I would rather spend time and trouble in getting clean and spotless negatives than in trying to remedy defects that could have been avoided. That is why I am "fussy."

# Picture Points

## for Beginners, No. XXIII,

by RICARDO

### Good Taste in Mounting

WHEN the print has been trimmed and is ready for mounting, there is a big temptation for the novice to introduce some ornamentation by way of numerous sub-mounts, fancy patterned mounts and decorative titling and initials.

If we compare the two sketches using the same print we can see how this over-decoration detracts from the picture and draws too much attention to itself.

Twenty years ago it was the vogue to use a few different sub-mounts, but to-day it is seldom that more than one is used. It is good advice to the beginner to use a sub-mount

only when the edges of the print are light in tone, which, if the print were mounted direct, would disappear into the mount. But the sub-mount must not be too assertive, if black or dark toned the edges must be very

narrow, as seen in the second sketch. The title and initials, too, should not be too large. If in doubt, letters of  $\frac{1}{8}$ -in. high, between two parallel lines, drawn through-out with pencil, is the safest guide.

### What is Wrong with the Composition?

HERE is another interesting exercise in composition, bringing in many points that have been discussed previously on this page. No particular reason is given why a Toby type of jug should be used, except that beginners usually choose such subjects that attract far too much attention to their design and novelty, instead of being plain and simple.

If we examine the left-hand sketch and compare it step by step with the second sketch, we can see how each fault can be removed and a passable arrangement be possible.

The position of the jug in the picture space is weak since it is "pointing" out of the picture instead of into it, and the handle is awkwardly placed. The lighting is badly placed, causing a shadow on the background which not only allows the picture to be divided into two but repeats the size and shape of the jug too closely to be pleasing.

Again, the lighting has caused a middle shadow on the jug that not only covers up the features, but shows bad modelling. The background is badly chosen because the tone is too light, with insufficient variation. A final point is that a second article is desirable to make a more pleasing arrangement and, if possible, to supply a motif.

Let us introduce a pipe and ash-tray, which are quite suitable to the picture and provide a counter-balance to the jug. A vertical picture is now more interesting, which, together with a better lighting and background provides a well-balanced picture.

reproduction of the original tones in the subject, that the print must be perfect pictorially. Even where we have complete control of light and shade, such as in portraiture and still life, it is very seldom that a straight print will give the best pictorial rendering.

It will be recalled that in some of the early pages of "Picture Points," the value of darkening foregrounds and near objects was discussed and shown to be justified. Here we have another instance where a much lower tone is preferable.

Let us assume that the top sketch is a straight print and is a good representation of a cloudless landscape. While the blank sky could easily be filled with clouds from a second negative, the lower sketch shows an alternative that is much easier to do and perhaps more in keeping with the passive nature of the subject.

By darkening or lowering the general tone, particularly that of the sky, we can obtain a good dramatic effect merely by increasing the printing time, and so obtain a good picture from an otherwise quite uninteresting print.

### When Tone Alteration is Justified

IT can be safely said that there are very few prints which cannot be improved by a slight alteration in tone values, whether in parts only or all over the print.

It is not enough to assume that because all the technical stages have been correctly carried out, and a straight print is as near as possible a true

reproduction of the original tones in the subject, that the print must be perfect pictorially. Even where we have complete control of light and shade, such as in portraiture and still life, it is very seldom that a straight print will give the best pictorial rendering.

It will be recalled that in some of the early pages of "Picture Points," the value of darkening foregrounds and near objects was discussed and shown to be justified. Here we have another instance where a much lower tone is preferable.

Let us assume that the top sketch is a straight print and is a good representation of a cloudless landscape. While the blank sky could easily be filled with clouds from a second negative, the lower sketch shows an alternative that is much easier to do and perhaps more in keeping with the passive nature of the subject.

By darkening or lowering the general tone, particularly that of the sky, we can obtain a good dramatic effect merely by increasing the printing time, and so obtain a good picture from an otherwise quite uninteresting print.

# Amateur Cinematography

NEWS, NOTES AND MATTERS OF INTEREST FOR ALL CINEMATOGRAPHERS USING AMATEUR CINÉ APPARATUS.

## "Ciné-Eight" Technique By J. RADFORD.

IF the matter is given a moment's thought, it should be obvious to all that the technique of the ciné-eight worker must differ to some extent from that of a worker in one of the other sizes.

We now have five sizes of film, 35 mm., 17.5 mm., 16 mm., 9.5 mm., and 8 mm. The main difference in technique between these five sizes will be in the use of the close-up. The smaller the negative image the less successful will it be for recording a landscape or similar subject on a grand scale. It therefore follows that detail in a large-scale subject must be shown, with the smaller sizes of film, by means of a series of well-cut medium shots interspersed with semi and full close-ups.

It is harder to produce a really good film on 8 mm. than it is to produce a good film on 35 mm. This acts, however, as a stimulant to the enthusiastic amateur, since it is obviously better to achieve a good result in a difficult size of the medium than merely to achieve mediocrity in a larger size.

The 8-mm. worker is, however, lucky in one respect, in that the manufacturer does give him really first-class processing, and the fact that the stock has very fine grain panchromatic characteristics enables him to produce work which is both the envy and the admiration of the 9.5-mm. worker.

The ciné-eight emulsion is similar to that of the fine-grain background negative used for the original negative in the professional film studios. So that the ciné-eight worker can use the normal

range of filters employed by the professional cinematographer. Then, again, the filter factors are the same as for Eastman Supersensitive Panchromatic (known in the studios as "Greyback"). The amateur can therefore make use of the table, reproduced below, which Kodak have calculated for the professional.

This table is used in the following way. First the normal exposure is found by means of a reliable meter, the aperture given, say  $f/8$ , is found in the first column headed "no filter," and if a 23a filter is going to be used one looks horizontally along the table from  $f/8$  under the heading 23a, and obtains a value of  $f/4.6$ . In other words, when you want to shoot through a 23a filter and the normal aperture is  $f/8$ , then the lens must be opened up to  $f/4.6$ . The filters referred to in the table are the Wratten series.

Whilst on this subject of filters it may be as well to point out that the be-all and end-all of filters is not to photograph blue ink letters with red ink corrections so that one or other of the two sets of writing is cancelled out. Yet this and clouds seem to be the stock-in-trade of the writers on filters in the photographic press. In the first place, let us take the close-up, a very important shot to the ciné-eight worker. Many people advise the amateur not to filter his close-ups. This is wrong; close-ups taken in brilliant sunshine which searches out all the tiny imperfections in the face should always be taken with a filter, unless of course these little imperfections are required. An Aero 1 or Aero 2 will clean up the face and will give it a more natural skin texture; at the same time

it will slightly lighten the lips to a more natural tone. These remarks are, of course, based on the assumption that no make-up is being used, which is usually the case when shooting home movies other than a photoplay.

For all ordinary work on 8 mm. an Aero 2 will give a pleasing correction. For landscapes, however, I prefer a G filter. A 23a filter (light red) will give over-correction of blues, but is very effective for shots when a strong contrast is required, such as May blossom swaying against the blue sky, and similar shots. The A (25) is normally known as the tri-colour red, and is a stronger red filter than the 23a. The degree to which you correct or over-correct a shot depends upon many factors, the first of which is your own personal taste.

It is more or less impossible to list out subjects and say this or that subject needs a so-and-so filter. The best way a beginner can learn something about filters is to expose a roll of film on two or three different subjects through a set of filters and then study the results on the screen very carefully.

Since the ciné-eight film is not symmetrical it follows that if a shot is taken with the camera upside-down to obtain reversed motion the film will have to be turned back to front when the strip is spliced into the film, because there are perforations down one side of the film only.

The effect of this on the screen is to reverse the image laterally, a proceeding which would very quickly be noticed. Another snag is that the emulsion will now be away from the gate, so that when this particular shot ran through the projector the shot would be out of focus on the screen, because the emulsion would be the thickness of the film base behind the focal plane of the lens. If it is desired to use this trick shot on the 8-mm. camera it will be necessary to shoot through a right-angled prism. This will make it more difficult to align the camera accurately, since a similar prism will be needed over the view-finder.

Finally, those readers who use the Stewart-Warner ciné-eight camera who complain that there is no reasonable-priced titling outfit on the market for use with this camera should go round the dealers and try to obtain one of the old Babygraph titling attachments which were marketed for use with the hand-cranked Baby Pathé camera. They are often to be obtained for 2s. 6d. nowadays, and they can be used very easily with the Buddy-eight.

The Coventry Amateur Film Society recently made a film in a public-house. The title is "April Showers," and the action takes place in the bar-room with customers taking an active part in the

film. The camera-man, who is also electrician, arranged flood-lights, and for two hours worked on the production. The customers entered into the thing in a whole-hearted manner, holding

animated discussions and playing darts while the film was being taken. This successful attempt was recently shown at the Society's own private theatre to a large audience.

# Readers' Questions ANSWERED

**GENERAL.**—All communications for the Editor should be addressed: "The Editor, *The Amateur Photographer and Cinematographer*, Dorset House, Stamford Street, London, S.E.1," and in every case, without exception, must give the name and address of the writer.

**CONTRIBUTIONS.**—The Editor is glad to consider original, up-to-date manuscripts on photographic subjects. All contributions must be typewritten, or in very legible handwriting on one side of the paper only. Letters or communications arising out of matters already appearing in the paper are not paid for. The Editor disclaims legal responsibility for the safety of matter submitted to him, but he will endeavour to return rejected manuscripts, etc., when a stamped addressed envelope is enclosed. MSS. or prints that are not actually accompanied by a stamped wrapper or envelope can in no case be returned. Reproduction fees for prints are only paid by arrangement beforehand. The sending of a print, without any condition stated, will be taken as permission to reproduce it without fee.

**ENQUIRIES AND CRITICISM.**—Advice, Criticism and Information are freely given, but the following conditions should be read carefully before applying, as any communication which does not comply with the rules must be ignored.

(1) See "General" above. (2) Every question and every print for criticism must be sent separately through the post, and must be accompanied by a separate stamped addressed envelope. No exception can be made in any case to this rule, except so far as enquiries or prints from Overseas are concerned. (3) Neither enquiries nor prints for criticism must be enclosed with competition prints. (4) On the back of each print sent for criticism, in addition to the name and address of the sender, must be the title (if any), and the criticism coupon from the current issue. (5) Enquiries should be clearly written, on one side of the paper only, and should be specific and not general. Such enquiries as "How can I take interiors?" or "Can you give me some hints on outdoor portraiture?" are too general to be dealt with in this section. (6) All envelopes should be distinctly marked "Query" or "Criticism," as the case may be. (7) Prints are sent for advice or criticism on the distinct understanding that by so doing permission is given for their reproduction without fee. We endeavour to deal promptly with enquiries, but cannot undertake to answer by return of post, nor can we give precedence to any enquiry.

A selection of those replies is printed each week, but all questions are answered by post. Enquiries from abroad must contain a coupon also, but it need not be from the current number, and should be cut from the latest issue to reach the enquirer.

## Daylight Enlarger.

Can one use artificial light and condenser by way of an illuminant for the ordinary daylight enlarger?  
A. G. C. (Kent.)

In the ordinary way it is not practicable to use a daylight enlarger with artificial light. There are two difficulties in the way. One is getting the light properly adjusted to the distance of the lens and condenser, and the other is that the very small aperture generally used for lenses in daylight enlargers would necessitate comparatively long exposures.

## Telephoto Lens.

What is the difference between a 12-in. telephoto lens and an ordinary 12-in. lens? What is the usual fitting needed for a telephoto lens to a reflex?  
C. B. (Luton.)

The main difference between the two lenses is that the telephoto lens needs only single-extension bellows, whereas the normal lens would require nearly double the extension. Another difference is that the 12-in. telephoto gives only a small field of illumination compared with the normal 12-in. lens, but since the telephoto lens is intended for use with small negatives, the diagonals of which should not exceed half the focal length of the telephoto lens, there is no need to go to the much greater expense of the normal lens. The sizes of the respective images from both lenses are the same. It is usual to fit the telephoto lens to another lens panel for quick insertion and removal.

## Angle of View.

Can you tell me which of my two cameras will show a wider field of view? "A,"  $3\frac{1}{2} \times 2\frac{1}{4}$  roll-film camera fitted with a 4-in. focal length lens, and "B,"  $4\frac{1}{2} \times 3\frac{1}{4}$  plate camera, fitted with a 6-in. lens.  
A. G. A. (Barnet.)

The camera with the 4-in. lens will give the wider field of view. It can be proved by two simple ways. Place a

piece of ground glass on the back of each camera, open the shutters on Time, and point the camera at, say, some house-tops silhouetted against the sky. It will then be seen that the smaller camera will include more of the roofs on both dimensions of the glass. The other way is by a simple drawing. Draw two rectangles, one  $3\frac{1}{2} \times 2\frac{1}{4}$ , the other  $3\frac{1}{2} \times 4\frac{1}{2}$ , and measure the diagonals of each. Compare each diagonal with the focal length of lens to be used on it and the diagonal which is comparatively longer will indicate the negative size giving the wider field of view.

## Glazing Trouble.

I frequently have to pull my prints off the glazing sheets, and when this happens most of the emulsion is left sticking to the sheet. Why is this, and how can I prevent it?  
G. O. R. (Rugby.)

You do not mention if you harden your prints first before squeezing them on the sheets, so it is quite probable that this is your trouble. Make up a ten per cent solution of formalin, and soak your prints in this for three minutes after the washing. Transfer the prints straight on to the sheets and the prints should drop off when dry. Hardening the emulsion in this way also allows a gentle heat to be used to hasten the drying.

## Shutter Efficiency.

What is the most efficient form of lens shutter—focal-plane, in-between lens or a roller-blind in front of the lens?  
J. F. (London.)

For a given exposure time to the negative a focal-plane shutter is the most efficient. It is difficult to say which of the remaining two is the more efficient since there are in-between lens shutters which work similarly to a roller-blind, i.e., of uncovering the lens uniformly instead of opening and closing from the middle as with a bladed shutter.

## Intensification Stain.

I am enclosing a negative that has been intensified by the chromium method. What is the cause of the staining?  
O. T. R. (Southampton.)

It is impossible to state exactly what has caused the staining. It may have been due to insufficient washing before bleaching or that the bichromate was not properly washed out. If properly carried out the negative should be perfectly clear and stainless.

## Depth of Focus.

What is meant by depth of focus?

A. C. (Carlisle.)

If you focus on a certain point there is also good definition for a certain distance in front of and behind that point, the distance or margin behind the point being always greater than the margin in front. When these two distances are added together we have the depth of focus. The depth of focus varies with the focal length and aperture of the lens. The shorter the focal length the greater the depth of focus, and the smaller the aperture the greater the depth of focus.

## Cut Films.

What are the advantages of cut films, if any, over plates? How can one tell which is the emulsion side for loading purposes?

M. C. (Southend.)

Size for size, cut films are cheaper than plates. They are flat enough when used in sheaths to keep good register all over, and, of course, will not break or chip like plates. They also take up less space for storing purposes. They are not packed, like plates, face to face, but are all packed in one way. In order to ensure correct loading the makers usually cut several notches in the top which, from the instructions usually enclosed, denote the emulsion side.

## Drying-marks.

What is the cause of the marks on the enclosed negative? Can I remedy them?

F. G. (Hackney.)

The marks are caused by uneven drying after washing. Negatives should not be taken straight from the washing bath and allowed to stand without a gentle swabbing of damp cotton-wool or chamois leather to remove the surplus water. Otherwise small drops of water remain on the emulsion after other parts are dry, causing uneven drying of the gelatine base and a slight alteration in the tone values. The best remedy is first to retouch the negative in the middle of the mark, which is lighter in tone, and then to retouch the print where the edges of the drying-marks have caused lighter tones.

## Photographing Silverware.

What is the best way of photographing silverware and getting rid of reflections at the same time?  
J. R. C. (Coventry.)

The simplest way we know is to dab the article with putty until it is even all over, and place it on a moderately dark grey base and background. This will get rid of reflection, but will, of course, dull the brilliance of the silver. An alternative method is to place large sheets of white cloth or paper over the top and sides to cut out the reflections of near-by objects. The base and background will be dark just the same.

# The Amateur's Emporium

## Prepaid Advertisements

### SALE AND EXCHANGE: AMATEURS ONLY—

12 words or less .....1/-  
1d. for every additional word.

### PROFESSIONAL AND TRADE—

12 words or less .....2/6  
2d. for every additional word.

Each paragraph is charged separately.

SERIES DISCOUNTS are allowed to Trade Advertisers as follows on orders for consecutive insertions, provided a contract is placed in advance, and in the absence of fresh instructions the entire "copy" is repeated from the previous issue: 13 consecutive insertions, 5%; 26 consecutive, 10%; 52 consecutive, 15%.

All advertisements inserted in these columns must be strictly prepaid, and reach the offices, Dorset House, Stamford Street, S.E.1, not later than first post Friday for the following week's issue. Advertisements are inserted, as far as possible, in the order received, and those received too late for one issue, or crowded out, are published in the first following in which there is space. The Proprietors retain the right to refuse or withdraw advertisements at their discretion.

## Box No. Advertisers

If a Box No. is required the words "Box 000, c/o 'The Amateur Photographer'" should be included in the charge, and an additional 6d. sent for registration and cost of forwarding any replies.

Letters addressed to box numbers are simply forwarded by us to the advertisers. We do not deal with the correspondence in any other way, nor accept any responsibility in connection with the advertisements.

## Deposit System

Readers may deal in safety through our Deposit System. Purchase money should be deposited with "The Amateur Photographer and Cinematographer." The time allowed for decision is three days, counting from receipt of goods, after which period, if buyer decides not to retain goods, they must be returned to sender. If a sale is effected, buyer instructs us to remit amount to seller, but if not, seller instructs us to remit amount to depositor. Carriage is paid by the buyer, but in event of no sale, and subject to there being no different arrangement between buyer and seller, each pays carriage one way. The seller takes the risk of loss or damage in transit. For transactions up to £10 a deposit fee of 1/- is charged; over £10 and under £50, 2/6; over £50 and under £75, 5/-; over £75 and under £100, 7/6; over £100 one-half per cent. All correspondence must be sent to Dorset House, Stamford Street, London, S.E.1.

"The Amateur Photographer" can be obtained abroad from the following: UNITED STATES: The International News Co., New York. FRANCE: W. H. Smith and Son, 248, Rue Rivoli, Paris; Hachette et Cie, Rue Reaumur, Paris. BELGIUM: W. H. Smith & Son, 71-75, Boulevard Adolphe Max, Brussels. AUSTRALIA: Gordon & Gotch, Ltd., Melbourne (Victoria), Sydney (N.S.W.), Brisbane (Queensland), Adelaide (S.A.), Perth (W.A.), and Launceston (Tasmania). NEW ZEALAND: Gordon & Gotch, Ltd., Wellington, Auckland, Christchurch and Dunedin. INDIA: A. H. Wheeler & Co., Bombay, Allahabad and Calcutta. CANADA: Imperial News Co., Toronto, Winnipeg and Vancouver; Benjamin News Co., Montreal; Gordon & Gotch, Ltd., Toronto. SOUTH AFRICA: Central News Agency, Ltd.

Cheques and Postal Orders sent in payment for deposits or advertisements should be made payable to **ILIFFE AND SONS LTD., and crossed**

Notes being untraceable if lost in transit should not be sent as remittances.

## WARNING

We have received many complaints from our readers in regard to the business methods of Mr. R. L. Green, trading as R. L. Green's Photographic Exchange, of 218, Fore Street, Edmonton, London, N.18, or (possibly with different initials) as Cine Photo Supplies, 4, Holborn Place, High Holborn, W.C.1.

For some considerable time we have refused to insert his advertisements in "The Amateur Photographer and Cinematographer," and from the complaints we have received it would appear that his practice is to communicate with private advertisers having goods for sale, offering to take such goods in exchange for others, or to purchase for cash. Readers are advised to ignore all such offers from this quarter.

## CAMERAS AND LENSES

1-PLATE Mahogany Camera, lens f/8, slides and R.B. shutter, 17/6; 1-plate Lens f/8, iris, 5/6; 8-in. Dallmeyer Patent R.R. (no flange), 5/6, postages extra.—Parkin, Hollyfield, Carr Lane, Willerby, Nr. Hull. [1271]

ROLLEIFLEX 6×6 Automatic, Tessar f/3.5, new two weeks ago; cost with accessories £25; best offer accepted.—Reply, 215, Dashwood House, London, E.C.2. [1279]

LEICA III, perfect condition, Elmar f/3.5, ever-ready case; cost over £32; accept £20/10.—Box 5974, c/o "The Amateur Photographer." [1281]

16 on V.P. Nagel Ranca, f/4.5, £2/17/6; V.P. Kodak, 8/6; V.P. Kodak Tank, 5/6; 1-pl. Cameo, 12/6; Kodak Telescopic Tripod, 5/-; Wynnes Meter, 1/-; all guaranteed splendid condition; wanted—Duo Kodak, Kodak tank and Justphot.—Box 5975, c/o "The Amateur Photographer." [1287]

SALEX Supreme 3½×2½ Folding Pocket Camera, f/4.5 lens; as new; perfect, 50/-.—P. Ayre, 7, Barrowby High Rd., Grantham. [1292]

CONTESSA Nettel 1-pl., Zeiss Tessar f/4.5, Compur, plate adapter and slides, leather case; perfect; £7/10.—Smith, 6, Mercers Row, Northampton. [1293]

CONTESSA Nettel 6×9 Focal-plane Press Camera, Zeiss Tessar f/4.5, shutter speeded to 1/1,200th, 3 D.D. slides, leather case; perfect, £10, or small camera and cash adjustment.—Trevelyan, 16, Silverdale Gardens, Hayes, Middlesex. [1295]

CONTEX, f/2 Sonnar, 1/25th to 1/1,000th, with ever-ready case, yellow filter and conical lens hood; excellent condition, £21/10; deposit system.—Pritchett, 2, Mitre Court, Temple, E.C.4. [1296]

1-PLATE (7×5) Kodak Graphic, triple extension, 2 revolving spring back, drop front, with a new 9-in. Tessar f/4.5, in Compound shutter, 6 double slides, 12 metal adapters, velvet-lined leather case, ideal portrait and hand outfit, £20/15; cost £48; accept first near offer.—Arlif, University Union, Manchester. [1298]

AGFA Speedex, f/3.9 lens, Compur, as new, £4.—J. Jordan, 21, Vernon Rd., East Sheen, S.W.14. [1304]

VOIGTLANDER Press Camera, 10×15 cm., Skopar f/4.5, 6 S.M. slides, F.P.A., filter, leather case, as new, tripod, Dallan tank, etc., £12; deposit system.—Moorhouse, Cartrefie, Moel-y-Garth, Welshpool. [1305]

BALDAX, 16 on 3½×2½, f/3.5 Trioplan, Compur, £4; Cine-Kodak B, f/1.9, 50/100 spools, filter, case, £11; perfect order.—Newmarch, 78, Empress Avenue, Woodford Green. [1306]

1-PLATE Sibyl, Zeiss Tessar f/4.5, F.P.A., 12 4 slides, leather case; also 4.5×6 cm. Dallmeyer Speed Focal-plane, 3-in. Pentac f/2.9, 2 D.D. slides, F.P.A., leather case, £13/10 the lot.—Cooper, 11, Grosvenor Terrace, Menston. [1310]

LEICA II, Elmar f/3.5, wire release, film trimming template, perfect condition, £17; Valoy Enlarger, 40-in. upright, as new, offers.—Greenfields, Swithland Lane, Rothley, Leicester. [1314]

## CAMERAS AND LENSES

£3/15 3×4 cm. Foth-Derby, f/3.5, D.A. focal-plane, leather case; once used, perfect; must sell.—BM/CLGL, W.C.1. [1315]

ROLLEIDSCOPE Stereo, pair f/4.5 Tessars, all in first-class condition, with leather case; £20, or offer; approval deposit.—Box 5983, c/o "The Amateur Photographer." [1318]

FOTH-DERBY Focal-plane, as new, f/3.5 lens, 60/-.—Box 5985, c/o "The Amateur Photographer." [1320]

ZEISS Nixe 1-pl. Roll Film and Film Pack Camera, in case, with Zeiss Amatar f/6.8 lens, Compound shutter; excellent condition, £3/10.—Sharland, 9/10, Thavies Inn, E.C.1. [1323]

SANDERSON 5×4, Beck f/6.8, 3 D.D. slides, £2; Justphot; Cooke f/3.1 2½ in.; twelve Zeiss 4½×6 cm. Single Slides; 8½-in. Condenser.—Rocke, 33, Clarendon Square, Leamington. [1325]

LEICA III, 5-cm. Elmar f/3.5, purse, lens hood, 2 spools; splendid outfit, cost over £32; sacrifice £21, no offers; deposit system gladly.—Sahy, 13, Hart St., Edinburgh. [1329]

ROLLEICORD, f/3.8 model, ever-ready case, Ilford Beta filter, total £14/10 three months ago, take £9/10; also Auto Exposure Meter, as new, 35/-.—Foster, 19, Warwick Rd., Earls Court. [1331]

IKONTA 520/2, Tessar f/4.5, Compur, 1 to 1/300th, exposed 4 spools, spotless, £7/10; exchange Twin-lens Reflex or Miniature, with or without cash adjustment; approval.—Hart, 63, Abbott Crescent, Clydebank. [1337]

REFLEX-KORELLE, 12 on 3½×2½ film, f/2.8 Tessar, 1/10th to 1/1,000th, E.R. case and filter, set unsoiled, £15; approval deposit.—Gullick, Myrtle House, Fowey. [1338]

1-PLATE Klimax, f/6.8 Aldis, Compur, double 4 extension, also velvet-lined leather case, 2 compartments, 6 slides, F.P.A., direct-vision finder, solid brass tank hold six; as new; highest offer lot.—Ansell, 56, Boxdale Rd., Liverpool. [1340]

3½×2½ T-P. Ruby Horizontal Reflex, Dallmeyer f/4.5, 12 exposure R.F. adapter, 4 slides, filter, leather case; excellent condition, £6/10.—Pemberton, 5, Lancaster Rd., N.W.3. [1343]

2½×3½ T-P. Junior Special Reflex, f/4.5 T-P. Cooke lens, revolving back, Dallmeyer Telephoto lens, Justphot, Dallan tank, Riteway R.F.A., 4 slides, plates, £15.—Stoker, Stockport Secondary School. [1346]

ROLLEIFLEX 6×6, latest model, unused, new last month, complete with leather case; cost £24; accept £19.—Bell, Ash Cottage, Singleton Rd., Kersal, Manchester. [1347]

LEICA Model III, black, Elmar 5-cm., in E.R. case, just been passed by Messrs. Leitz and in new condition, £22; Supplementary Front Lens, Elpet No. 3, complete with reproduction device and lens, new and unused, list £3/10, for £2/10; Practos Exposure Meter, 7/6; E.R. Case, for No. II Leica, 15/-.—Below. [1348]

HEKTOR f/1.9 Rectilinear, focussing, complete with screw-in No. 1 yellow filter, hood, cap, and solid leather case with shoulder-strap, £19/10.—Wallis, 6, Newborough, Scarborough. [1349]

KODAK 2½×3½ Roll Film, Zeiss Tessar f/6.3, Compur, self-erecting model, £3/3; Zeiss Mirax Enlarging Attachment, 2½×3½ adapter, with 1-pl. Cameo, f/6.8 Cooke, 7-speed shutter, in good working order, £2/10.—Warren, 5, Westbourne Rd., Sydenham. [1349]

PROFESSIONAL Miniature, Ernemann Focal-plane Camera, 4½×6 cm. Ernoster f/2 lens, self-capping shutter, 1/1,000th sec., 6 slides, lens hood and leather case; hardly used, cost £53; sell £18; approval against cash to value or deposit system; further details and photograph, write—G. Roland Whiteside, 11, Newmarket St., Blackburn. [1350]

SIX-20 Brownie, case, new, 18/6; Kodak Self-timer, 3/6; exchange new 3½×2½ Agfa Film Camera, f/4.5, delayed-action Compur, case, for Reflex.—Box 5992, c/o "The Amateur Photographer." [1351]

ZEISS Super Ikonta 530/2UCPR, two weeks old; sacrifice for cash, £14/10.—Box 5993, c/o "The Amateur Photographer." [1352]

LEICA I, non-interchangeable, Elmar f/3.5, cassette-leather case, good condition, £7/15; Leitz Range-finder, 25/-; Correx Tank, 16/-; Leicaoscop, in case, 17/6; no offers; wanted—Rolleicord or Rolleiflex.—Box 5995, c/o "The Amateur Photographer." [1354]

## CAMERAS AND LENSES

HIGH-CLASS Miniature Outfit, at less than half-price, Nagel Rolloroy (Pupille), 16 on V.P., Leitz Elmar f/3.5, Compur velvet-lined case, hood, release; Piccochio Vertical Enlarger, f/4.5 lens, all fittings, Ensign daylight tank; all genuinely as new; cost £24; accept £11.—Longson, 132, Bramhall Lane, Stockport. Phone, Great Moor 2182. [1269]

LATEST Model Slow-speeds to 1/1,000th Contax, Sonnar f/2, newest view-finder; cost £41/11/6 ten days ago; sacrifice at £29/10.—Box 5972, c/o "The Amateur Photographer." [1277]

£4 KOLIBRI, f/3.5 Zeiss Novar lens, D.A. Telma shutter, purse; new.—Box 5973, c/o "The Amateur Photographer." [1278]

## "ELTRON" ELECTRIC IMMERSION HEATER

The Eltron is the most convenient and quickest electrical method of heating developing solution to the requisite temperature.

The Eltron can be used in any room where a supply of electric current is available. It is safe in use and can be immersed in a glass or other vessel and the solution quickly brought up to the temperature required.

The Eltron is supplied for attaching to any standard pattern electric lamp-holder. By means of an adapter it can also be connected to any standard wall plug fitting.

Universal pattern Eltron for use on any voltage.

Price 12/6

# THE LARGEST ORGANIZATION OF ITS KIND IN THE COUNTRY OFFERS YOU THE BEST SERVICE

Wallace Heaton offers facilities which cannot possibly be obtained elsewhere. Registered Leica customers are supplied free on request with Leica spool transit envelopes to ensure safe despatch of D. & P. orders. Free copies of "Leica News and Technique" are sent to you periodically, and "News" binders for preserving your copies are supplied at 1/- each. Leica exposure record cards are also available. Full technical information is willingly given on all matters photographic. We carry the most comprehensive selection of latest miniature cameras and accessories, and all the best home movie apparatus, both silent and talkie. Demonstrations willingly given at any time by appointment.

## Leica

Every model in stock from 61/10 down; also every accessory, including Hektor and Elmar lenses, angular view-

finder, developing tank, synchronised flash outfit, etc. Get in touch with us for all your Leica needs.

## MINIATURE DEVELOPERS AND DEVELOPING SUNDRIES

**Paraphenylene Diamine Glycin.**—The super fine-grain developer. Tin contains sufficient for 20 oz. Results enlarge almost any size without grain. .... 1s. 0d.

**Tetonal Ultrafin S.F.**—Latest Continental fine-grain developer. Per carton making 600 c.c., can be used repeatedly, 4/-

**Stop-bath and Hardener.**—New "Wallace Heaton" preparation for use when developing Leica and other films between development and fixing. Eliminates scratching, and cures bright, crisp, clean negatives. Per packet for 20 oz., 3d.

**Fesagol.**—A compensating developer for prints and enlargements. Eliminates staining. Good results even from poor negatives, 1/7 and 3/2.

**Supramin.**—The non-poisonous paraphenylene for fine-grain negatives. Per tin for 36 oz., 1/10.

**Viscose Sponges.**—For drying films after development, 1/6, 2/6, 3/6. Very absorbent. No risk of scratching.

# TO-NIGHT—AFTER DARK— take HOME SNAPSHOTS with the Kodak Night Photography Aids

Equipment has been further improved this year and the brilliant "Photoflood" Lamp now costs much less—reduced from 4/- to 2/6. All you need to make charming, informal home pictures is

KODAK SUPER SENSITIVE PANCHROMATIC FILM, plus *either* the "Photoflood" Lamp and "Kodaflector," or the "Sashalite."

## Kodak Super Sensitive Panchromatic Film

The film of lightning speed; six times as fast as Regular Film to artificial light. Made in Roll Film and Film Packs.

## "Photoflood" Lamp

New reduced price, 2/6.

Plugs into ordinary electric light socket; gives intense *continuous* light.

## "Kodaflector" Junior

Specially designed reflector for "Photoflood." Increases photographic efficiency of illumination, decreases necessary exposure times.

Supplied with stand, enabling it to be stood on chair, table, etc., or suspended from shelf or picture-rail, and 9 ft. of flex. 6/-

## Baby "Sashalite" Lamp

No smoke! No smell! No danger! Gives intense brilliant *flash*; the modern successor to flashlight. Fired by pocket torch battery. 10½d. each

## "Sashalite" Amateur Outfit

Consists of 2 Baby "Sashalite" Lamps, battery in holder, and collapsible reflector. 7/6

### How this picture was made.

Two "Photoflood" Lamps were used, one in lamp on shelf and one in "Kodaflector." The exposure was 1/20th second at f/5.6 on Kodak Super Sensitive Panchromatic Film.

Write for free illustrated folder giving similar lighting diagrams and exposure details, and other useful tips.

# Make your own enlargements

ZEISS IKON, always foremost with precision instruments, offer a varied selection of high-class enlargers. First, the

**MIRAPHOT** A vertical automatic focussing enlarger in three sizes: (a) for negatives any size up to  $4\frac{1}{2} \times 3\frac{1}{2}$  ( $9 \times 12$  cm.); (b) up to  $3\frac{1}{2} \times 2\frac{1}{2}$ , and (c) up to  $1\frac{1}{2} \times 1\frac{1}{2}$  ( $3 \times 4$  cm.). With the MIRAPHOT manipulation is simple. The lenses give perfect definition, thanks to the scientifically designed reflector, illumination is even and negatives seldom require retouching.

Prices, complete with Zeiss Tessar  $f/4.5$ :

For negatives up to  $9 \times 12$  cm. . . . . £14 15 0

For negatives up to  $3\frac{1}{2} \times 2\frac{1}{2}$  . . . . . £10 15 0

With Zeiss Ikon anastigmat: For negatives up to  $1\frac{1}{2} \times 1\frac{1}{2}$  . . . . . £11 2 6

then the **MIRAX**

An all-metal enlarging attachment which utilises your roll-film or plate camera from  $3\frac{1}{2} \times 2\frac{1}{2}$  to  $4\frac{1}{2} \times 3\frac{1}{2}$ . It can be used horizontally, as illustrated, or vertically with the MIRAX vertical easel. It gives powerful illumination, consequently short exposures, and it is the most economical way of obtaining a first-class enlarger. Prices for camera up to  $4\frac{1}{2} \times 3\frac{1}{2}$ , including lamp . . . . . £3 7 6  
Prices for camera up to  $3\frac{1}{2} \times 2\frac{1}{2}$ , including lamp . . . . . £3 10 0  
The Mirax is normally supplied for horizontal use as illustrated; when equipped with easel for vertical use costs £1 17 6 extra.

ZEISS IKON products are stocked by most good camera shops, name and address of nearest dealer on request.

## ENGLAND'S BUYING CENTRE for MINIATURE CAMERAS SPECIALIZATION.

### MINIATURE APPARATUS.

We are the only firm in Great Britain specialising exclusively in miniature apparatus such as the Leica and Contax. Every miniature camera of distinction together with a full range of accessories is to be seen at our showrooms. Where miniature cameras are concerned, we give the highest part-exchange allowances and pay the best cash prices in the trade. Any type of modern high-class apparatus taken in part exchange.

### PROCESSING.

A new approach to the problem of processing is essential if flawless negatives and perfect enlargements are to be produced from miniature negatives. Appreciating this, we have equipped ourselves exclusively to deal with the miniature negative. We pride ourselves that the results fully justify our policy.

### New Enlargers for

LEICA

CONTAX

ROLLEIFLEX

SUPER IKONTA

EXAKTA

Owners!

We make a point of collecting all available enlargers for miniature cameras. For some time we have been receiving numerous enquiries for a reasonably priced and efficient job to take the now popular  $6 \times 6$  cm. and  $4.5 \times 6$  cm. negatives. We are pleased to announce that we are now able to supply a well-made and inexpensive instrument of this type.

The new enlarger, the Vertex, is of the semi-condenser type. The lamphouse is unusually large and well cooled, and the negative carrier of simple and convenient construction. It is fitted with an  $f/4.5$  anastigmat and has an orange swing filter. The maximum enlargement obtainable from a  $6 \times 6$  cm. negative, without swinging the head round and projecting off the baseboard, is  $15 \times 15$  in., or from a  $4.5 \times 6$  cm. negative approximately  $15 \times 12$  in. Price, £8 8s.

The other two Vertex models are for Leica and Contax owners. They are supplied without lenses and take the Leica and Contax lenses respectively. Maximum magnification is approximately 7 times linear. Price £6 6s. each.

### 'ROLLEIFLEX'

The all-automatic roll-film reflex. Gets unusual pictures at a split second's notice. What you see on the ground-glass screen you get in absolute detail on your negative, parallax compensation fully allowed for. With Compur shutter, Zeiss Tessar f/3.5

SONGS without words are all very well, but pictures without names—! We listened the other night to a lecture illustrated by colour slides, and the lecturer got so enthusiastic over his pictures that he quite forgot to tell us what they were. Here were a series of quiet corners in some ancient town—it might have been Canterbury or York—but they went unnamed in the anxious consideration of the lecturer as to whether there was too much red in the picture. A delightful bit of coast scenery such as we would not mind going into the next county to see was without location, it only illustrated some point in exposure. Of some gardens which were a riot of loveliness we learned nothing; the only question was whether the delphiniums appeared really blue. The same thing has plagued us in looking at exhibition prints. The simple title "Boston Stump" would be far more poetical for us than that line from Wordsworth about "pinnacle and spire . . . clothed with innocuous fire," and we would rather hear that the name of the sitter was "pretty little Polly Perkins of Paddington Green" than that she was the "queen of melting joy." We just had to get that off our chest, and now we feel better.

### A National Film Library.

Mr. A. C. Cameron, Secretary of the Central Council for School Broadcasting, and a governor of the British Film Institute, in opening the present Cinematography Exhibition in Russell Square, touched on the value of a national film library which has just been launched by the Institute. Its object is to provide for the preservation of copies of important films. It is hoped that the library will be able

## TOPICS of the Week

START OF THE HUNTING SEASON.

*A good snapshot of the Aldenham  
Harriers at the opening meet at  
Banville Farm, Herts.*

to secure and preserve any films depicting historical events, and films, like "The Covered Wagon," which have artistic or documentary interest. Take such a film as "Emil and the Detectives," which aroused unbounded enthusiasm when it was shown, but when a great public school desired a copy it was informed that there was not one left in the country. Another purpose of the library is to acquire for distribution to education authorities and schools copies of educational films of value and to put the authorities in touch with the film producers. Mr. Cameron also touched on the need for assembling in each locality those interested in the film from any point of view, so that branches of the Film Institute might be formed, in which films could be made, exhibitions arranged, and owners of local picture theatres encouraged to show certain kinds of films. On this last point we confess a little scepticism as to whether picture theatre proprietors, with an eye on the queue, will pay much attention to what a small group of earnest people, interested in the film over and above its entertainment value, may say or want.

### Dufaycolor.

Major P. C. Bull brought forward some interesting experiences with Dufaycolor to the Colour Group of the Royal Photographic Society the other evening. As to exposure, he has come to the conclusion that, using the Weston meter, a speed of 16 is correct, or, if an extra bright colour for a particular purpose is wanted, as in seaside bathing scenes, it may go up to 20. As for after-processes he confessed himself rather appalled at the seven baths laid down by Ilford, and he had tried

to cut them down and had succeeded in getting down to more or less the same number as in the Agfa process. For the reversal bath those responsible for the Dufaycolor insist upon permanganate, stating that the results are rather brighter than with bichromate, but in Major Bull's view there is very little difference, and he has used a bichromate reversal bath all through, except for experiments. If rather brighter colours are desired permanganate may be resorted to, but it does mean an extra clearing bath afterwards. He takes care to wash well, and to make the last washing slightly alkaline with a little ammonia. Major Bull's pictures with Dufaycolor, taken during the summer holidays and late into the present autumn, were in many cases a high tribute to the process and to himself; others were admittedly experimental

#### G. B. S. and Photography.

It is not surprising at all to find published in connection with a current art exhibition a letter from

Mr. Bernard Shaw to the artist engaged in making the woodcuts for his "Adventures of a Black Girl in Search of God," in which he talks, as one who might be a photographer himself, about photography. He complains of a proposed representation of himself in one of the pictures: "My face is like the photographs they stick on to ready-made bodies to amuse Bank-holiday trippers. Also it is drawn from one of the old photographs taken on ordinary plates without a colour filter, which represents me as a dark man instead of a very blond blond." Unlike some literary men, Mr. Shaw knows what he is writing about when he writes about photography. It is not just that superficial acquaintance with showcases or albums or girls with cameras that passes muster in much that is written. Nearly thirty years ago now we remember hearing "G. B. S." give a technical lecture at the Camera Club in London on photography. He discoursed for an hour and a half in brilliant fashion, and the coruscations of his wit could

not conceal the fact that he had some solid knowledge of the subject from the pictorial side. Many authors would scarcely know that there were such things as colour filters.

#### Looking at Kodacolor.

Several hundred feet of Kodacolor film, taken on a trip down the Yangtze river, were shown at the Royal Geographical Society the other afternoon. The result was admirable, but the audience were besought to get as near the centre of the hall as possible, since the colour and indeed the outlines of the image are much deteriorated for those who sit at the side. It was almost unbelievable that the bright and jolly picture which was seen when one was in the axis of the projector and the screen was the same picture as the colourless and meaningless moving shadows which were seen when one moved right or left of the midline. In judging a colour film it is very important to have regard to the position at which one is stationed in relation to the projection.

## READERS' PROBLEMS

Selected queries on topics of general interest to readers will be fully dealt with on this page week by week. Other replies appear as usual on the last page.

#### High Key.

*What exactly decides whether or not a print is in a high key? What is the best method of producing such prints?*  
F. W. W. (Reigate.)

There are borderline cases for both high and low key pictures, but the general idea is clear enough. If you imagine the whole scale of tones that a paper will give, from black up to white, you can

divide this scale into two approximately equal parts. Then you may say that a picture which includes only such tones as are found in the upper (lighter) part is in a high key.

We reproduce an example of a print which is definitely in high key throughout. The darkest tone that can be found is a light grey. If a dark boat on a very small scale had been included this would not have affected the classification of the print; but if there had appeared considerable masses of foreground with tones running down to black, or thereabouts, the picture would no longer be in a high key, even though the rest of the tones remained as they are.

In a general way a high-key picture necessitates a light-toned subject. For high-key studio portraits, clothes, background, accessories and lighting are all selected for the purpose in view. At the same time, a good deal can be done by making a print in such a way that the whole scale of tones in the negative is not utilised. This can often be done by full exposure and only partial development. There is, however, a risk of poor colour, and a suggestion of muddiness rather than pearliness; and, more important still, the subject itself may by no means lend itself to high-key treatment.

November 20th, 1935

# RAPID DEVELOPING and PRINTING

Although haste in the making of negatives and prints is not often necessary, there are occasions when a photograph has to be produced in the shortest possible time by the amateur. The following article indicates the best procedure for doing this.

**A**LTHOUGH, for obvious reasons, photographic operations are best carried out without hurry, there are occasions, as in press work, when it is necessary for the photographer to produce a finished print in the minimum of time.

## Preliminaries.

There are certain essentials that may be suggested by way of preliminary preparations. Solutions should be made up, dishes washed and ready for immediate use, printing papers ready, and the enlarger assembled, and if necessary focussed for the size of print wanted. If all these things have to be done at the moment they are required, then the production of the prints will take much longer.

The photographer is well advised to employ his standard methods for developing. It is possible to use the developer at greater strength, but it is not advisable to use it at greater than double strength, and care should be taken to see that the temperature is not lower than 65° Fahr. Fixing solutions stronger than those recommended do not act more quickly, and sometimes they take longer.

It is well known that some plates develop and fix more quickly than others, and this is one of the advantages claimed for certain Press plates. On the whole, the photographer who wishes to produce a negative and print in the shortest possible time may work best with material to which he is accustomed.

## Development.

In the case of panchromatic material desensitising should not be omitted, as it makes for safety, and only occupies but a short time. If a number of plates are being developed it is a good plan to use a tank, and to use developer of double strength. If this is done care must be taken to keep the solution in action the whole time,

or tank markings will be produced.

Under-development should be avoided; it is easier to produce a good print from a negative of the right contrast, than is possible from one which has been made too weak in an attempt to save time in development.

## Fixing.

A normal strength hypo bath of 4 oz. to the pint of water is advocated. It should be freshly made, and of the same temperature as the developer (65° Fahr.). A cold hypo solution fixes more slowly. Rocking the dish during the fixing will also speed matters up. Thorough fixing may not be permitted on account of lack of time; all that is necessary is to clear the negative of silver, and it can be returned to the hypo bath to complete the operation after the prints have been made.

Washing follows, but only sufficient to remove the surface hypo. This is best accomplished by a quick rinse under a tap of running water, or by rapid rinsing in a large bowl of water. Thorough washing can be completed later.

## Printing.

There are several courses open to the photographer. The negative can be printed while wet in the enlarger. It can be printed wet if contact prints are wanted, or it may be dried before printing.

If it is decided to enlarge the negative while wet, the film surface is wiped with a damp pad of soft chamois leather, and the negative inserted in the enlarger. Two points need attention: If the enlarger is warm, focussing should be done with another negative, and the wet negative placed in the carrier and removed directly the exposure is made. If this is not done there is some risk of melting the film.

To make contact prints from a wet negative, the latter, after rinsing, is placed in a bowl of clean water, a piece of bromide paper is slid under the water and brought

into contact with the film surface. This is done in the dark-room, of course, and if it is done carefully the two can be in perfect contact without airbells between them. The "sandwich" thus formed is then taken from the bowl, wiped free from surplus water, gently squeegeed into contact with a flat rubber squeegee, and laid flat on the table, negative upwards, and exposed. No printing-frame is necessary.

The exposure can be made either by switching on an electric bulb which is suspended above the table, or by using an electric torch, or even by lighting a match and waving it over the negative for the requisite number of seconds. After exposure the two are again placed under water, separated, and the print developed.

This plan is only advocated when one, or at the most two, prints are wanted.

If it is thought best to dry the negative before printing, the surplus moisture is gently wiped off, and the negative placed in methylated spirit for two or three minutes. If it is then subjected to a current of warm air, drying will be rapid. Films can also be dried in this way, but it is not recommended as the celluloid may buckle.

## The Print.

After two minutes' fixing the print is rinsed under the tap, the surplus moisture blotted off, preparatory to drying. It is possible to dry a bromide print in front of a fire or gas heater in two or three minutes. The print should not be held close, or the film may melt, but at a safe distance drying is rapid and without risk. If speedy drying is necessary, the print may be placed in methylated spirit for three minutes, after which it will dry almost immediately. In some newspaper offices Press prints are first soaked in spirit and dried by applying a lighted match to one corner. This burns off the spirit and dries the print.

# Shooting the "World's Fastest Game"

By P. F. CHANDOR.

ICE-HOCKEY is known as the fastest game on earth, and when it comes to photographing it the description seems adequate enough.

An ice-hockey player, when skating as fast as he can, goes at a speed approaching twenty-five miles an hour. At this speed he can turn almost on a sixpence, so following him in an ordinary hand-camera view-finder is out of the question. A reflex camera provides almost the same difficulties, for the player is into and out of the

SHOOTING AT GOAL. S.S. pan., 1/500th sec., f/3.5.

IN MID FIELD. S.S. pan., 1/500th sec., f/3.5.

of ice-hockey action pictures is to get in touch with one of the rinks and to arrange to be present at one of the team practises.

It will generally be found that the teams practise early in the mornings, though there are occasions when these are held at midday. If the photographer is lucky, this is the time he will select, for this is when there is most light.

The widest aperture lens that it is possible to obtain should be used, and the camera focussed on some definite spot on the ice, somewhere just in front of the goal. The best shots are obtained from a spot just slightly in front of the goal at the rink-side.

It will generally be found that after a goal has been scored or an attempt made, the players are comparatively stationary for a split second.

This is the moment to shoot; but it may require a lot of patience to wait for it.

mirror almost before the operator has had time to press the button.

The only view-finder worth using for ice-hockey shots is the eye-level direct-vision type. The finder used with the modern miniature camera is most suitable, and this instrument is actually the ideal camera. The depth of focus combined with the wide-aperture lenses now fitted to the Leica or the Contax make them almost essential in rinks where the light is far from good.

As ice-hockey matches in this country are played in the evenings, there is the difficulty of artificial light with which to contend. Only the most sensitive panchromatic material can be used, and even the fastest films are found to be slow.

The best method for the amateur who is anxious to secure a series

# MAKE BROMOILS THIS WINTER

The Process in brief.

By E. BARWELL.

**W**HY not make some bromoils of your best subjects this winter?

Here is a process which, with a little practice, offers great opportunities for control in various directions on bromide prints of any size. For instance, high-lights may be accentuated or removed, shadows may be made much lighter than in the original print; and, quite apart from these modifications, a really good bromoil has a charm of its own and a subtle "quality" which is excelled by no other process.

It must not be thought, however, that making a bromoil will turn a bad print into a good one. A print which is over-exposed and under-developed is no good at all. A good, correctly exposed and fully developed print is the first essential.

For the benefit of the beginner, who knows nothing about the production of a bromoil, it may be well to explain here that the process consists of bleaching out the silver image of a bromide print or enlargement, and substituting an image composed of oil pigment. Simultaneously with the bleaching the image is tanned and hardened so that its power of absorbing a greasy ink is proportionate to the original strength of the image in its various parts.

## Materials required.

To do this we shall require: A good bromide print that has been properly fixed and washed, some bleacher, a tube of black oil pigment, medium for thinning the pigment, and two or three bromoil brushes. A word about brushes. It pays to buy the best that one can afford; a cheap and unsuitable brush is a source of endless trouble. They are made with a flat end shaped at an angle like a hoof, both in hog's hair and fitch.

A suitable combination of brushes to start with is a 1-in. hog's-hair and Number 12 fitch brush. Bromoil brushes and pigments, etc., can be obtained from Messrs. Sands Hunter and Co., and Messrs. Sinclair, whose advertisements will be found in "The A.P."

The best results are obtained in the simplest way by using the special bromoil papers, such as Ilford or Kodak. It is possible, however, to use the ordinary bromide papers,

thereby taking advantage of the wider choice of grades and surfaces available.

Having decided to use the special bromoil paper, the first step is to obtain a good enlargement. This is done in the usual way, except that it is better to use the developer which is recommended by the makers of the paper. Also, fixing should be done in a plain hypo bath—hypo 4 oz., water to 20 oz. is very suitable. The print is then well washed for an hour.

## Bleaching.

The bleaching bath is prepared as follows:

Copper sulphate ..	280 grs.
Potassium bromide ..	280 grs.
Potassium bichromate ..	17 grs.
Sulphuric acid (strong) ..	14 min.
Water to make ..	20 oz.

Add the acid to the water first.

The well-washed print (it can be dried first, if necessary) is immersed in this bath until it is entirely bleached to a pale-lemon colour. This takes from five to ten minutes. The bleacher should be carefully bottled and can be used again. The print is then washed for ten minutes and fixed for five minutes in a ten per cent bath of plain hypo; after which it is washed for a quarter of an hour, swabbed with cotton-wool, and hung up to dry. It is then ready for pigmentation at any time.

Before the pigment (also called "ink") can be applied, the dry bleached print is soaked in plain water at 70 to 75 degrees Fahr. until the main outlines of the image are visible in slight relief. Meanwhile, preparations have been made for pigmentation. A slab of glass several sizes larger than the print is obtained, and is covered with two or three thicknesses of well-damped blotting-paper. When the print is judged to be sufficiently swollen it is placed on the blotting-paper and blotted off with a piece of clean, soft, fluffless linen rag until no water is visible on the surface. It is necessary to have a white margin round the print to prevent the brush getting wetted by the damp blotting-paper.

Now squeeze on to an old plate or a piece of glass a little pigment from the tube, about as large as a pea, and spread it out thin with a knife. Take the largest hog's-hair brush and press

it gently on to the pigment, then several times on a clean portion of the palette to distribute the ink evenly; there should be the merest trace of ink on the brush.

The brush is then held in a vertical position and pressed on to the print, toe first, until the heel is also touching the print; it is then quickly removed with a sort of delicate wrist action. This is hard to describe in words, but quite easy to perform; what is required is a kind of gentle dabbing dragging action of the brush hairs.

## Pigmenting.

If all is well it will be found that the image will gradually build up. If, however, the print refuses to take the ink it may be that the ink is too stiff; it should be thinned with a trace of the medium, worked in with the knife. Be careful not to make the ink too thin or the result will be flat and without detail. It is best to go all over the print first and then, if required, build up the shadows to the required density. After the image has been inked up broadly with the hog's-hair brush, the fitch brush is used for further pigmentation and working the details to a finer texture.

If it is required to lighten any part of the print this is done by allowing the brush to drop on and off the print with a kind of hopping action.

There is not space here to describe all the shades of technique, but it will be found, with practice, that great control and a variety of results are obtained by handling the brush in different ways; gently pressing the brush on the print, for instance, will add pigment, while quick dabbing will take it off again. It is very fascinating to see the image grow under the brush, and it always seems a much more personal affair than the somewhat mechanical business of developing an ordinary print. This, and the feeling of control accounts probably for the popularity of the process amongst so many serious workers.

Finally, after pigmentation is completed, the print is hung up to dry, which takes two or three days. When the surface is quite hard blemishes and brush hairs may be removed with a sharp-pointed knife. It may then be trimmed and mounted—preferably dry-mounted.

# FLASHLIGHT

*An Article for the Beginner and others with a cheap camera*

*Helping Mother.*

THERE must be thousands of amateur photographers who abandon photography out of doors during the winter months because the light is too poor for their cameras, and who never attempt portrait or figure photography indoors, because they consider the aperture of their lens is too small.

Flashlight, however, should solve their difficulty for indoor work during the dark days and evenings of winter-time, as the quantity of light can be increased to any extent to suit a small-aperture lens.

For those with a box camera, or small folding camera, of which the lens aperture is not more than  $f/11$ , the work is just as easy and the results should be just as good as those obtained with a much more expensive camera with a large-aperture lens. In any case, the following notes should be read and flashlight given a fair trial, as by this means excellent indoor portraits, figure studies and groups can be obtained anywhere at night-time with the greatest ease. The fastest available films or plates should, however, always be used.

The first essential, apart from the camera and flashlight powder, is the means of ignition. Touch-paper in strips is generally supplied free with the powder. The end of a strip is inserted into the heap of flashpowder previously placed on a tin lid or similar small metal tray, and when all is set for the exposure, the free end is ignited with a match.

The red smouldering glow produced takes a little time, however, to reach the powder, and the delay is apt to cause a tense expression to appear on the sitter's face. Again, when a prompt exposure is necessary, as with a child at play, in order to catch a particular expression or the proper pose, the delay makes this method impracticable.

The best means is undoubtedly a flash-lamp, either mechanical or electrical, which produces instantaneous combustion. There are various types on the market ranging from 3s. 6d. upwards. All types are good, and it is seldom they fail to ignite.

With mine, I attribute such failure to neglect to clean the lamp. The latter is a prime factor in the perfect working of all types. After use, not necessarily after each exposure, but certainly before being stored away, the lamp should be thoroughly cleaned.

The other main accessory is a tripod. A table, a chair or other support can, of course, be used, but as cheap two-section tripods are now sold at 3s. 6d. each, an effort should be made to acquire one. The great advantage of easy manipulation in comparison, will be ample recompense for the slight outlay. A wire release for the opening and closing of the shutter is a help, but a lens cap, if such can be used, will suffice. The ordinary shutter release may likewise be used, if suitably placed.

The background should be carefully considered and no effort spared to keep it plain and unobtrusive, as on this the success or otherwise of the pictorial result often depends. A plain distempered or papered wall is best. If this is not available an increased blanket or sheet (preferably other than white) will serve excellently.

In most cases it will be necessary to pose, or arrange in some way, the subject, and this should be done as naturally as possible. The illustrations herewith give an indication of what is possible with a  $2\frac{1}{4} \times 3\frac{1}{4}$  cheap camera with lens working at  $f/11$ .

The subjects capable of treatment are many, and include ordinary portraiture, fireside studies, children at

*A respite while baby sleeps.*

# for ALL

By JOHN P. MUNN.

play and asleep, helping mother, etc.—in fact any little home-life incident that appeals. The series should also be attempted and, if successful, may find a ready sale with periodicals where one picture would be useless.

It is not difficult to get harsh results in flashlight, but just as easy, with a little care, to produce soft, well-graded negatives. To aid this the use of a diffusion sheet and reflector are often advocated. These are certainly helpful, although I seldom use them except for strict portraiture. I find that the low white ceiling and deep frieze, coupled with fairly light coloured walls of the

"Poor Dolly!"

living-room give all the diffusion required.

The beginner need not, therefore, trouble himself with these accessories, but later may experiment, if so inclined. He should, however, watch development of the negative carefully, employing a developer capable of giving soft results. Rytol, Azol, Rodinal, etc., at half their normal strength are admirable.

The quantity of powder also has a bearing on the final result. The amount to be used for a given exposure depends on the distance of the flash, not the camera, from the object, but if, as generally, the lamp is held just slightly behind the camera, the distances will be approximately the same. Follow out the maker's instructions regarding quan-

*Slumber.*

tity. This information is given in a table with every packet of flashpowder such as Johnson's or Agfa. Err, if anything, on the lavish side, as ample exposure tends to prevent harshness. Again, if a plate camera is used, soft gradation plates will help the desired effect.

If the camera has a ground-glass screen this may be used for arranging the subject on the plate, but it will probably be useless for actual focussing. Rather focus by scale. The position of the lamp, when firing, may be varied, but the direct rays of the flash must on no account be allowed to strike the lens. Note also that no mirrors or pictures are so placed as to reflect the flash back into the lens. A lens hood will be useful in preventing this, but if possible always keep slightly behind the camera. The farther the lamp is held to one side from the camera the better the modelling.

An exception must be made when a fireside scene, with the supposed glow of the fire lighting the subject, is depicted. This effect is procured by throwing the flashpowder, contained in a piece of screwed-up paper, into the fire, and here the lens is protected from the flash rays by placing a figure directly between the camera and the fire, so as to obscure them.

In the ordinary way the lamp is held high up (but not too near the ceiling or

curtains, etc.) and fired immediately the shutter, set to "Bulb," is opened, closing the latter again at once. The same applies when a lens cap is used, previously having set and opened the shutter at "Time." In the event of a misfire—that is, the powder failing to ignite—the shutter must be closed or the lens covered immediately.

It should be noted here that flashpowder is affected by the atmosphere and therefore the lamp should not be loaded until the actual exposure is about to be made.

Finally, never try to light the powder directly with a match. Use the touch-paper if you have no other means of ignition. If the lamp misfires, use extreme care in ascertaining the cause and on no account look close into it. Keep the lamp at arm's length.

*Xmas morning.*

# NEWS AND REVIEWS

ITEMS OF GENERAL INTEREST FROM ALL QUARTERS.

**The Twenty-Eighth Scottish National Salon** will be held in the Victoria Art Galleries, Dundee, from February 8th to February 29th, 1936. In addition to the section devoted to Scottish photographers there is an international section. Entries close January 11th, 1936. Entry forms and full particulars are obtainable from the Hon. Salon Secretary, Norman G. Brown, 36, North Lindsay Street, Dundee.

**The Photographic Dealers' Association** held their annual dinner on the evening of November 6th at the Park Lane Hotel. The President of the Association, Mr. C. T. Thonger, was in the Chair. A very large attendance, representing the entire photographic trade, and their guests, made the function a great success. Mr. E. Blake, Managing Director of Kodak, Ltd., proposed the toast to the P.D.A., and the President, in his reply, coupled with it the "Federated Photographic Manufacturers." The dinner was followed by a cabaret and musical entertainment. The Hon. Secretary, Mr. Wallace Heaton, and the General Secretary, Mr. E. J. Andrews, are to be congratulated for their untiring work on behalf of the Association.

**For a firm of plate and film manufacturers** to market an exposure meter designed specially for use with their own negative material has long been considered the ideal arrangement. Messrs. Ilford have now introduced a photo-electric meter of a type that has been found very satisfactory for general use. The meter is simple to use, and there are no calculations to make. With the emulsion speed set according to the tables enclosed, the meter is pointed to the subject and the shutter speed reading is noted on the meter scale. There is a range of three different ratings on this scale, each one being printed in a differ-

ent colour that conforms with an arrow on the aperture scale, thus enabling the entire range of speeds to be read at a glance. This also enables the *f*/stop to be found when a certain shutter speed has been decided. Although the emulsion speed table has been engraved specially for Ilford materials under five different headings, A, B, C, D and E, to suit each successive grade of sensitivity, the meter can be used just as satisfactorily with all other brands once their relative speed is found. In series with the photonic cell is a variable resistance which controls all the readings from one second to 1/3,000th second, including 1/32nd for cine cameras. The Ilford meter is very strong and robust, and is constructed in a boxform shape measuring  $3 \times 2\frac{1}{4} \times 1\frac{1}{2}$  in., with single control dial so arranged that it can be held and operated in one hand only. Supplied complete in quick-action leather case, it retails at £3 5s.

**Correction.**—In our review of the K.W. Episkop in last week's issue the aperture of the anastigmat projection lens fitted to the instrument was given as *f*/32. This was a printer's error for *f*/3.2. Will prospective buyers of the Episkop kindly note.

**Coronet Midget Snapshot Competition.**—This competition, which ran during the summer months, and closed on September 30th, 1935, has now been judged. The first prize of 25 guineas has been awarded to Herbert A. E. Hey, The Parade, Arundel, Sussex. The second prize of 10 guineas went to Frank Muscroft, 14, Hayes Street, Meanwood Road, Leeds, and the third prize of 5 guineas went to G. E. D. Garnett, 49, Alpha Road, Cambridge. Prizes were also awarded to the dealers who sold the films on which the winning entries were made, and these are respec-

tively, W. B. Allison, of Arundel, Messrs. Lancaster & Son, of Leeds, and Boots, Ltd., of Cambridge. Ten Consolation Prizes of one guinea each were also awarded to the competitors, and ten of half a guinea each to their dealers. Over 3,500 entries were received.

An attractive little leaflet that will appeal to the amateur will be sent free to any reader of "The A.P." interested in photography at home by artificial light. It is called "Home Snapshots after Dark—the Kodak Way." A postcard to Kodak Ltd., Kingsway, will bring it.

In the Holiday Snapshot competition organised by Messrs. Bathes, Ltd., of Torquay, the three chief awards were First (Rolleiflex), Mrs. R. Atyeo, Bridgewater; Second (Rolleicord), Miss I. Marsh, Burnham-on-Sea; Third (Ebner folding camera), A. C. Player, Coventry. Ten other cameras and sixteen consolation prizes were also awarded.

Two additions to the attractive series of little books devoted to work with the miniature camera, and issued by the Fomo Publishing Co., Canton, Ohio, have just appeared. They are entitled respectively, "Getting Ahead in Photography," and "The Theory and Practice of Miniature Camera Photography." The price is 4s. each, and they are obtainable from the sole distributors in this country, Sands Hunter & Co., Ltd., 37, Bedford Street, Strand, W.C.2.

We are asked by Messrs. Criterion (Plates, Papers, Films), Ltd., to announce that Mr. J. E. Chester, Mr. G. W. McIntosh and Mr. S. Camp have been appointed to represent them.

Another photo-electric exposure meter has just been announced by Messrs. Sands Hunter & Co., Ltd., 37, Bedford Street, Strand, London, W.C.2. One of the claims for this, in addition to its accuracy, is its smallness and portability, in that it will fit a vest pocket. We will refer to this later after testing. It is called the "Prinsen" Electric Exposure Meter.

## Exhibitions and Competitions

CURRENT AND FUTURE.

**The Amateur Photographer Monthly Competitions** for Beginners, Intermediate and Advanced Workers.—Entries, November 30. Rules in issue of October 30.

**Seventh Western International Photographic Salon.**—November 23–30. Organising Secretary, W. H. Hill-Muchamore, 24, Church Road, Redfield, Bristol.

**Third (Second International) Wilmington Salon of Photography.**—Open, January 6–26, 1936. Last day for entries, December 15, 1935. Particulars and entry forms from the Salon Committee, Delaware Camera Club, P.O. Box 818, Wilmington, Delaware, U.S.A.

**Leicester P.S. International Exhibition.**—Entries, January 24, 1936; open, February 24–March 7, 1936. Exhibition Secretary, H. Foscutt, 19, Doncaster Road, Leicester.

**Preston Scientific Society.**—Eleventh Annual Open Photographic Exhibition. Monday, February 3 to Saturday, February 15, 1936. Entries close Friday, January 10, 1936. Particulars and entry forms from the Exhibition Secretary, F. Wells, 65, Powis Road, Ashton, Preston, Lancs.

**The 40th Annual Exhibition of the South London P.S.**—Open, February 15–March 14, 1936. Entries close, January 21. Further details and entry forms from Hon. Exhibition Secretary, H. S. Adams, 40, Stockwell Park Road, London, S.W.9.

**Scottish National Salon.**—February 8–29, 1936. Entries close, January 11. Particulars and entry forms from the Hon. Salon Secretary, Norman G. Brown, 36, North Lindsay Street, Dundee.

**Edinburgh Photographic Society.**—74th Annual Open Exhibition. Open, February 22–March 7, 1936. Entries close, February 3, 1936. Particulars and entry forms from the Hon. Exhibition Secretary, Geo. J. Kennedy, 16, Royal Terrace, Edinburgh.

**Birmingham Photographic Society.**—45th Annual Exhibition. Open, February 29–March 14, 1936. Entries close, February 8, 1936. Particulars and entry forms from the Hon. Secretary, Eric H. Bellamy, Waterloo House, 20, Waterloo Street, Birmingham, 2.

**Ilford Photographic Society.**—Annual Photographic Exhibition. From Monday, March 2 to Saturday, March 7, 1936. Closing date for entries, Saturday, February 1, 1936. Particulars and entry forms from E. G. Roughton, 63, Havering Road, Romford, Essex.

**City of London and Cripplegate Photographic Society.**—Thirty-first Annual Photographic Exhibition from March 16–21, 1936. Entries close, February 10, 1936. Particulars and entry forms from the Hon. Exhibition Secretary, A. C. Mundy, 11, Monkham Lane, Woodford Green, Essex.

**VIIe Salon International D'Art Photographique de Bruxelles**, 1936.—Open from March 21–April 5, 1936. Entries close, February 25. Particulars and entry forms from M. M. Devaivre, 152, Rue Markelbach, at Brussels, 3, Belgium.

**Darwen Exhibition of Photography.**—April 20–May 2, 1936. Entries close, March 19. Particulars and entry forms from the Secretary, J. H. Woods, South Down, Bolton Road, Darwen.

**Bristol Photographic Society.**—Second Annual Open Exhibition, from May 2–19, 1936. Entries close, March 28. Particulars and entry forms from the Hon. Exhibition Secretary, Percy V. Cave, 36, Coldharbour Road, Redland, Bristol, 6.

**Sunday Referee Weekly Photographic Competition.**—£10 offered every week for the best picture published. See *Sunday Referee* for full particulars.

**Seventh Chicago International Salon of Photography.**—Open, July 23–October 4, 1936. Entries close, June 15, 1936. Further details and entry forms from Alex. J. Krupy, Chicago Camera Club, 137, North Wabash Avenue, Chicago, Illinois, U.S.A.

**I Internationale Kunstphotographische Ausstellung in Karlsbad.**—Open from July 18–August 9, 1936. Entries close, June 18, 1936. Particulars and entry forms from Mr. Hugo Heyer, Schulgasse 26, Karlsbad.

# Letters to the Editor

*The Editor is not responsible for the opinions of his correspondents.*

## "THE SHADOW ON THE SAND."

SIR,—I heartily sympathise with "Womanhood Outraged," whose letter appeared in a recent issue, condemning nudity. She will have an uphill fight of it. Besides muzzling "The A.P." and almost every other photographic paper, it will be necessary for her to close down the Salon, the P.P.A. Exhibition and even the poor old R.P.S. Forman Hanna, Bertram Park, Dorothy Wilding, and other masters of the art will have to flee to some desert island, where they can live their lives steeped in sin without offending decent Nordic susceptibilities. They will, of course, be joined by their brothers of the brush, as naturally the Academy and the National Gallery will also be cleaned up by a "cleavage" committee from Hollywood.

It is to be hoped, however, that the closing of the British Museum will be a purely temporary measure, and that it will reopen after the Grecian marbles have been purified with plaster ballet skirts.

Yes, I sympathise with "Womanhood Outraged." Not in her efforts to bowdlerise Art, but in having the type of mind which cannot distinguish between a beautiful piece like "The Shadow on the Sand" and the type of postcard sold by greasy Orientals in Port Said.—Yours, etc., E. B. W.

SIR,—When reading the letter from "Womanhood Outraged," contained in your recent issue, my astonishment was considerable.

My principal objection to this diatribe anent the depiction of a nude female form is that an obviously innocent portrayal of a subject which for sheer beauty can be possessed by no other than its like image, has been viewed in such a wrongful attitude. These moralistic attacks are published from time to time in the public Press, and swiftly fade from sight and memory, but to find one such in "The A.P." is a novelty.

In my opinion the reproduction of the work in your journal denotes a measure of acknowledged merit, and it is the ensemble of these reproductions which should receive any technical criticism.

The moral critic is entitled to analyse, but not to misconstrue.—Yours, etc., W. N. PHILLIPS.

SIR,—May I, a reader of your paper for the last fifteen years, compliment you on your introduction of the humorous paragraph. That published in a recent issue in the guise of a letter above the definition "Womanhood Outraged," as a piece of delightful absurdity, was sublime.

Incidentally, just ten years ago some serious letters on the same topic were sent to, and published by, you.—Yours, etc., "A VERY EVIL MAN."

SIR,—If the letter appearing over the *nom de plume* of "Womanhood Outraged" is intended to be taken seriously and is not merely a "leg-pull," it deserves at least this reply.

A woman's body, and a man's, is neither common nor unholy, and those who regard it with curiosity and evil eyes are, fortunately, very much in the minority, as the warped outlook displayed by your correspondent is seldom encountered in these days of enlightenment.

A beautiful picture, statue or spectacle is an artistic thing, and anything evil about them can only exist in the distorted mind of the so-called "puritan."

I would assure "Womanhood Outraged" that I would much prefer to exhibit in public my healthy nakedness than the unfortunate state of mind with which she is afflicted.—Yours, etc., "MENS SANA."

SIR,—I wonder if your correspondent, who hides under the pen-name of "Womanhood Outraged," thinks flowers are beautiful. Other natural forms are as beautiful; the beauty of a beautiful human figure is very similar to that of a flower. "Feeling uncomfortable," "being disgusted," "shame" at

the sight of a nude figure or picture, are due to a psychological condition, the result of wrong training. Any one who is shocked or "outraged" at nudity is psychologically maladjusted to life.

I entirely disagree with your correspondent when she suggests that "a woman who would pose for that picture . . . has sadly fallen from her place of honour," actually 'tis the writer of the letter who, by her views expressed, completely exposes her outlook upon life and nudity as a case needing psychological adjustment.

In conclusion may I express my appreciation of the healthy attitude which "The A.P." has always held towards the photographic representation of the nude?—Yours, etc., A. E. GREENSLADE.

SIR,—I concur with all the letter of "Womanhood Outraged." As a matter of fact I tore out the picture in case any member of my family might see it.

It is all very well for some people to say that it is "High Art," but it seems to me only to be an excuse for the obscene. I wonder if "High Art" disciples would like to see a near relation of theirs photographed in such a condition and the photograph appearing for public view.

Like your correspondent I wondered what character the "model" could bear permitting herself to be photographed nude. I do sincerely hope that "The A.P." will refuse to exhibit such pictures in future.—Yours, etc.,

"ALLIANCE OF HONOUR."

SIR,—I must protest at the intolerant prudery shown by "Womanhood Outraged"; who, having confessed in cold print that the sight of the human body gives rise to "uncomfortable" thoughts, insists that 90 per cent of your readers have a similar unhealthy outlook. Surely the correspondence which ensued concerning the authenticity of the shadow proves that it was observed by quite a number of people.

In my opinion a noticeable feature of "The Shadow on the Sand" was the complete absence of suggestiveness and the delicacy with which the nude theme was treated. The young girl, too, is to be admired on her natural and unaffected pose and her freedom from camera-consciousness.

The creative artist has through the centuries found inspiration in the well-proportioned nude of both sexes, and the world is undoubtedly aesthetically the richer for the beauty bequeathed us in paintings, statues, and other mediums.

I trust your correspondent always goes about heavily veiled so that her otherwise "stark naked" face may not be "outraged" by the "curious and evil" male eyes she finds all around her.—Yours, etc., R. A. H.

SIR,—In reference to the letter from "Womanhood Outraged," I would suggest she changes her circle of men friends if 90 per cent of them look at nude photographs of the type in question with evil eyes.

Strange how some things affect some type of minds.—Yours, etc., A. R. TURPIN.

SIR,—I am heartily in agreement with the letter from "Womanhood Outraged," published recently in your columns. I think, however, that your correspondent does not go far enough. Women, it is my firm conviction, should uphold the sanctity and the uncommonness of their sex by still further covering themselves from our curious and evil eyes.

I am aware that your journal is devoted to Photography and not to Fashion; but "Womanhood Outraged" has supplied me with a long-sought opportunity to urge that women should keep our minds clean for us by garbing themselves in such a manner as to leave their sex less apparent.

May I suggest a yashmak and a roll of linoleum?—Yours, etc., "FATHER OF SIX."

# "The Amateur Photographer"

# ANNUAL LANTERN-SLIDE COMPETITION

THE entries in this year's competition exceeded in quantity those in similar competitions for any previous year. The quality of the slides was also of a higher standard throughout, and really poor slides were conspicuous by their absence. Class I (Landscape) was again easily the largest, but was run close by Class II (Portraits and Figures). The Colour Slides were not so good, and although including all the latest processes they were uneven in merit. The fact that in no instance were there any slides wrongly spotted constitutes a record. The judging of several thousands of slides, needless to say, was an arduous task; every slide was, however, put through the lantern and projected on the screen at least twice, while before a decision regarding the winners was arrived at many were projected five or six times. The collection of prize slides, with additional slides purchased from the entries, has already started on its long tour round the societies. Every date has been booked until May, 1936. The Awards are as follows:

## CLASS I. LANDSCAPE, WITH OR WITHOUT FIGURES, SEA SUBJECTS AND RIVER SCENERY.

SILVER PLAQUES.—"The Fisherman," by T. T. Bonner, 55, Onslow Road, Southampton; "Springtime," by A. J. Woodley, 2, Redcliffe Street, Worcester.  
BRONZE PLAQUES.—"Weeds and Rushes, Winter," by John J. Hartley, Craven Bank House, Colne, Lancs; "The White Mill," by G. Warren Parrett, Corbiere, Fitzmary Avenue, Westbrook, Margate.  
CERTIFICATES.—"Vesuvius," by D. G. Wraith, 41, Branksome Wood Road, Bournemouth; "Patience," by Mrs. B. Rodney Bryant, Ross, Caldy Road, West

Kirby; "The Lodge Gates," by H. H. Langmuir, 5, High Street, Deal, Kent; "In Troubled Waters," by S. J. Beckett, Pineville Hotel, West Cliff, Bournemouth; "Towards Evening," by A. V. Bibbings, 58, Queen Street, Newton Abbot; "In an Old-World Town," by John D. Jones, Sandycroft, Silkmore Lane, Stafford; "Tranquil Corner," by R. C. L. Herdson, 88, Elfindale Road, Herne Hill, London, S.E.24; "The Bather," by J. F. Cutler, 52, Gibbs Green, Edware, Middlesex; "This Perpetual Making

Up," by G. B. Kearey, 2, Thomas Street, Crumpsall, Manchester; "Eternal Snows," by A. E. Lockington Vial, Kerri, Shanklin Drive, Leicester; "Storm over the Ridge," by T. T. Bonner, 55, Onslow Road, Southampton; "An Old-World Corner," by Miss Anne Jackson, 61, Richmond Grove, C-on-M., Manchester, 13; "Sunshine and Shadow," by the Rev. R. J. Attfield, Henock Vicarage, Newton Abbot, Devon; "Top of the World," by A. C. R. Redgrave, 84, Norfolk Road, Cliftonville, Margate.

## CLASS II. PORTRAITURE AND FIGURE STUDIES, INDOORS OR OUT OF DOORS.

SILVER PLAQUES.—"Meditation," by Henry Tolcher, Larchwood, Marine Road, Colwyn Bay; "Peter—a Child Study," by R. C. L. Herdson, 88, Elfindale Road, Herne Hill, London, S.E.24.  
BRONZE PLAQUES.—"Jovial Artist," by Mrs. B. Rodney Bryant, Ross, Caldy Road, West Kirby; "A Langthwaite Farmer," by Samuel Thompson,

West Bank, Scotforth Road, Lancaster.  
CERTIFICATES.—"Ballet," by Hubert Henshaw, 149, Clarence Street, Bolton, Lancs; "Jeannette," by J. H. Clark, 304, Camberwell New Road, London, S.E.8; "Sisters," by A. V. Bibbings, 58, Queen Street, Newton Abbot, Devon; "L'Apache," by Alfred Jones, 3, Clinton Avenue, off Clinton Lane, Kenilworth, War-

wickshire; "A Corsican Mountaineer," by G. B. Kearey, 2, Thomas Street, Crumpsall, Manchester; "Fireside Thoughts," by Henry Tolcher, Larchwood, Marine Road, Colwyn Bay; "After Dinner Rest Awhile," by E. H. Austin, 27, Elsmere Avenue, Liverpool, 17; "Happy Faces," by Henry Tolcher, Larchwood, Marine Road, Colwyn Bay.

## CLASS III. ARCHITECTURE, INTERIOR AND EXTERIOR.

SILVER PLAQUES.—"L'Eglise St. Jacques (Dieppe)," by John J. Hartley, Craven Bank House, Colne, Lancs; "A Sunlit Door," by Henry Riley, Brantwood, Westhoughton, near Bolton, Lancs.  
BRONZE PLAQUES.—"Old Buildings, Sandwich, Kent," by H. H. Langmuir, 5, High Street, Deal, Kent; "The Giant," by George C. Backhouse, 16, Sandhurst Grove, Harehills Lane, Leeds, 8.  
CERTIFICATES.—"The Font, Milton Abbey," by T. T. Bonner, 55, Onslow Road, Southampton;

"Barrons Hall," by J. H. Clark, 304, Camberwell New Road, London, S.E.8; "Charing Cross (Underground)," by George A. Slight, 18, Ewmlne Road, Forest Hill, London, S.E.23; "Sunshine in a back Street," by G. Warren Parrett, Corbiere, Fitzmary Avenue, Westbrook, Margate; "The Font," by B. Garth, 38, Church Street, Smedley Lane, Manchester, 8; "Otz Church," by J. Lemon, 31, Natal Road, Thornton Heath, Surrey; "Circles and Angles," by H. Reardon, 12, Crocketts Walk,

Beelestone, St. Helens, Lancs; "In Valle Crucis Abbey," by Harold Hill, Glenbourne, 40, Dore Road, Sheffield; "Milan Cathedral Roof," by H. E. Illingworth, Carbayne, Leadhall Lane, Harrogate; "Choir Stalls, St. Botolph, Boston, Lincs," by Stanley Bult, 26, Canning Road, Croydon; "McLeod Tomb (1528), St. Clement's, Harris," by G. B. Kearey, 2, Thomas Street, Crumpsall, Manchester; "The Statue," by W. G. Budd, Eaton Socon, St. Neots, Hunts.

## CLASS IV. FLOWERS, FRUIT, AND OTHER "STILL-LIFE" SUBJECTS.

SILVER PLAQUES.—"Relief on Sarcophagus (Battle between Romans and Barbarians)," by Samuel J. Beckett, Pineville Hotel, West Cliff, Bournemouth; "Rhododendron Bloom," by Miss Anne Jackson, 61, Richmond Grove, C-on-M., Manchester, 13.  
BRONZE PLAQUES.—"The Pump," by W. E. Ward, 56, Murray Avenue, Bromley, Kent; "Flower Design," by George Haines, 4, York Road, Chorlton-cum-Hardy, Manchester.

CERTIFICATES.—"From a Carriage Window," by John D. Jones, Sandycroft, Silkmore Lane, Stafford; "Jewelled Leaves," by George Haines, 4, York Road, Chorlton-cum-Hardy, Manchester; "Roof Carving, Sancerre Church," by J. F. Cutler, 52, Gibbs Green, Edware, Middlesex; "Broad-leaved Garlic," by William Clarke, 9, Howard Crescent, Dunfermline; "Sea-fishing Tackle," by Samuel J. Beckett, Pineville Hotel, West Cliff, Bournemouth; "Tigress Licking

Pan, Bench End, Lakenheath," by G. B. Kearey, 2, Thomas Street, Crumpsall, Manchester; "The Jester (carving in Choir, St. David's Cathedral)," by Miss M. Wight, Mordiford, Hereford; "Fruit," by John W. Ratcliffe, 701, Rochdale Road, Royton, Oldham; "Pivot Scuttlies, Sunlight and Shadows," by E. Doddsdon, Durham House, 124, Old Christchurch Road, Bournemouth; "Ceiling, Bishop West's Chapel, Ely Cathedral," by Victor E. Morris, Wellington House, East Grinstead, Sussex.

## CLASS V. NATURAL HISTORY SUBJECTS.

SILVER PLAQUES.—"Wallace," by R. W. A. Burgess, Ben Bhan, 193, Dimsdale Parade, Wolstanton, North Staffs; "Merlin and Eggs," by Arthur Brook, Market Street, Builth Wells, Breconshire.  
BRONZE PLAQUES.—"Male Rooks Guarding Sitting Mates," by G. B. Kearey, 2, Thomas Street, Crumpsall, Manchester; "A Baby Seal," by James Gibson, Poltair, St. Mary's, Isles of Scilly.  
CERTIFICATES.—"Chaffinch," by A. J. M. Fletcher, 4, Crow Hill, Borough Green, Kent; "Six Weeks'

Old Lion Cub," by Mrs. B. Rodney Bryant, Ross, Caldy Road, West Kirby; "Female Merlin with Chick," by G. B. Kearey, 2, Thomas Street, Crumpsall, Manchester; "Barn Owl (Flashlight)," by Arthur Brook, Market Street, Builth Wells, Breconshire; "Polar Bears," by R. W. A. Burgess, Ben Bhan, 193, Dimsdale Parade, Wolstanton, North Staffs; "Decoration," by S. D. Barnwell, 209, Sandon Road, Stafford; "The Watcher," by A. V. Bibbings, 58, Queen Street, Newton Abbot; "Yours Faithfully," by T. T. Bonner,

55, Onslow Road, Southampton; "Gwen," by R. W. A. Burgess, Ben Bhan, 193, Dimsdale Parade, Wolstanton, North Staffs; "Sea Gulls Alighting," by Henry Tolcher, Larchwood, Marine Road, Colwyn Bay; "Short-tailed Vole," by W. E. Ward, 56, Murray Avenue, Bromley, Kent; "Anticipation," by S. K. Lazell, Lyndhurst, Ravenswood Avenue, Tunbridge Wells; "T'ould Gobbler," by B. Garth, 38, Church Street, Smedley Lane, Manchester, 8.

## CLASS VI. LANTERN SLIDES IN COLOUR (NOT HAND-COLOURED).

SILVER PLAQUE.—"Kitchen Stuff," by J. W. Atkinson, 39, Beresford Avenue, Hull.  
BRONZE PLAQUE.—"Sgurr-nan-Gilleann," by Miss Isobel Simpson, 369, Blackness Road, Dundee.  
CERTIFICATES.—"The Beacon," by Hubert Henshaw, 149, Clarence Street, Bolton, Lancs; "Gathering Poppies," by E. John Bull, 44, Peak Hill, Sydenham, London, S.E.26; "Evening Light on Cotswold

Stones," by Miss M. Wight, Mordiford, Hereford; "Repair Yard," by William Clarke, 9, Howard Crescent, Dunfermline; "The Lily Pool," by J. W. Atkinson, 39, Beresford Avenue, Hull; "Pink Water-Lilies," by Miss M. Wight, Mordiford, Hereford; "Church Decoration," by R. M. Fanstone, 16, Palmerston Street, Romsey, Hants; "King John's House, Tollard Royal," by the Rev. R. J. Attfield, Henock

Vicarage, Newton Abbot, Devon; "Winter Evening," by J. H. Clark, 304, Camberwell New Road, London, S.E.8; "Autumnal Tints," by John Lemon, 31, Natal Road, Thornton Heath, Surrey; "Portrait (The Pink Shawl)," by Willis Nevitt, 51, Greenhill Road, Liverpool, 18; "Quayside, Queensferry," by William Clarke, 9, Howard Crescent, Dunfermline.

## CLASS VII. CHAMPION CLASS. OPEN ONLY TO THOSE WHO HAVE WON SILVER OR BRONZE PLAQUES IN "THE AMATEUR PHOTOGRAPHER" LANTERN-SLIDE COMPETITIONS.

"The Mountaineer," by Miss Alice Jackson, 250, Manchester Road, Burnley, Lancs.

Miss DAISY  
E. EDIS.

From information communicated to our Special Representative.

"NOW that I come to try to say something about my exhibition pictures I realise how very far my results fall short of my ideals. To begin with, when we attempt to make successful pictures of figure subjects we must be able to see beauty in those whom we are to portray—not only beauty of face, for there is often just as much loveliness in hands, feet and line of body. We must decide on the type

of picture we wish to make, and then search and wait till the right model can be found.

"As regards the actual production of exhibition work it is essential to have a sound knowledge of good composition; otherwise, how are we going to balance our pictures so that they will give us that beauty of line and pattern without which they will certainly fail of their purpose? After we have mastered these fundamentals, then our own individuality comes into play.

"Speaking of my own methods, I feel that I must get my sitters into sympathy with me; must make them forget they are in a studio, and, if possible, infuse my ideas into them to make them live the part.

"As far as possible I use only a small amount of light. Half of the portraiture of to-day is ruined by over-lighting. As a rule I use two 1,000 half-watt rest lights, sometimes with a little top general illumination. Occasionally I make use of the spot-light, but I have no use for splotches of light appearing here, there and all over. They are distracting in the extreme, and in my opinion a simply-lighted portrait is much to be preferred.

"Now, as I use only a small amount of light I must be generous in exposure. I usually give two to four seconds, and have given as much as seven or eight when I have had big masses of shadow to deal with. My developer is the M.Q. Kodak formula, used weak—water, and plenty of it. I develop slowly, so that the resulting negative is beautifully soft and full of gradation. There must always be a shadow within a shadow, and this must also be borne in mind when lighting the subject.

"When it comes to making the prints I generally use the Gevaert K51 chloro-bromide paper, which has wonderful latitude. Again I give plenty of exposure, and use a weak developing solution. In this the paper is put for a few seconds only, and then given a soak in water. At intervals I rub in the parts I want to bring up, but this is a ticklish job, and unless care is taken the colour of the image will not be the same all over. But I find the method very useful—immersion in the developer and a soaking in water alternately. The process is slow but effective, and a full range of tones finally results.

"Further, if I am not satisfied with it when it is dry—and I am seldom satisfied with anything I do—I control further by means of oil pigments. This method was taught me by Mr. Lee Syms, who is a past master at it, and I find it of great benefit. Sometimes quite a small amount of treatment will make a great difference in the picture.

"Such, in brief, are my methods; and I hope they may be of use to other workers who make photographs for the sheer joy of their craft."

(A further example of Miss Edis's work appears on one of the centre Art pages.)

# Pictorial Analysis

Every week the picture reproduced on the art page opposite will be analysed in detail for the benefit of readers of the paper who are seeking to improve their pictorial work.

"BODIAM CASTLE," by W. Werner.

**D**IGNITY and height, as well as impressiveness, are qualities that are finely expressed in this picture, and, in view of the associations arising from the nature and ancient character of the subject material, there is also a suggestion of romance. The presentation, too, has the benefit of an effect of sunshine, and the nicely-clouded sky not only lends a finishing touch to a scheme that is remarkably complete, but also imparts a sense of breeziness and air and space.

Considerable point is given to the value of the sunlight by the restraint with which it is shown. Except for the light on the upper portions of the towers, practically the whole of the subject is in shadow. What lights there are are emphasised by the preponderating proportion of heavy tone and rendered very precious, so that, small in area though they be, their effect is rather to be measured by their concentration and intensity than their scale. It will be seen that the most considerable mass of sunlit wall occurs at (1). Here is the centre of interest, and the point is stressed by its position in the picture space; by the surrounding masses of shadow tone; and by the repetition in sequence of the other patches of sunlight at (2) and (3).

The strength of position of (1) lies in the fact that it is removed sufficiently far from the edges to avoid any suggestion of weakness, but, at the same time, it does not so nearly approach the centre as to invite a feeling of symmetry—a feeling that would scarcely accord with the nature of the subject material. The emphasis imparted by the proximity of shadow tone arises from force of contrast, while, besides the sense of pattern that the repetition of the lights at (2) and (3) imparts and the additional impression of order conferred upon the arrangement, they also enhance the interest attaching to (1) by acting as accents in support.

They happen to fall at intervals upon a line which extends more or less horizontally to the right of the principal light (1), and, being placed in the upper portion of the print, the need is immediately felt for a further light note in the lower. This is provided by the swan (4) in the first place, and, as this would be insufficiently

of the water, though, as far as the chiaroscuro or disposition of the light and shade is concerned, the lights in question are wholly isolated.

The vertical lines, apart from providing a connecting link, have another function in that they exert an appreciable influence in conveying the suggestions of dignity and height.

These impressions are somewhat heightened by the way the space above the towers is restricted, but are more definitely influenced by the opposition of line provided by the upper margin of the cloud against the blue of the sky. The tendency of this line is upwards from left to right, while the inclination of the line formed by the tops of the towers is downwards. The opposition is mutually strengthening, but the effect is the greater on the more important element and tends to create the illusion that the walls are higher than they are in actuality. In this, the line of the cloud is extremely useful and its inclusion, just as it is, is fully warranted, though, in other circumstances, the value of the sunshine at (1) would have been forcefully emphasised had it been shown in opposition to a deeper tone in the sky.

A possible compromise suggests itself. It would not be at all a difficult matter to introduce, by means of local retouching, a small area of deeper tone in such a way that it suggests a bit of cloud in shadow, much after the fashion in which the tone of the cloud on the right is lowered where it does not catch the light.

The actual top of the cloud should be left as it is, the shadow commencing about a quarter of an inch below and deepening gradually between the two vertical lines, so that for the lower half-inch it is of greater depth than the adjoining light. Properly executed, the adjustment should have the effect of enforcing the value of the sunshine.

"MENTOR."

insistent by itself, it is helped by the lighter mass of the floating foliage stretching from side to side immediately below.

Detached as these two aggregations of light notes are, they imply a connection between the upper and lower parts of the picture, which aids the creation of a very necessary feeling of unity. This connection, however, is more definitely established by the arrangement of line, the strong verticals of the towers joining up with the horizontal lines formed by the masses of the leaves on the surface

# PICTURES by Novices

## SOME CRITICAL COMMENTS on the Beginners' prints reproduced on the opposite page

AS a composition, No. 1 of the prints reproduced on the opposite page—"Aylesford Bridge," by E. W. Barton—makes up remarkably well. The angle at which the bridge is seen is very well chosen; the rendering of the sunlight on the water is most effective; and the eye is led naturally and efficiently up to the charming bit of distance towards the left.

### Work in Winter-time.

It may be that a little more on the left-hand side would be found an advantage; that the telegraph pole at the end of the bridge is rather too insistent; and that it could be wished that the curve of the shadow at the base joined up with the base of the pier on the right; but, for all that, these are not matters of great moment and do not—to any appreciable extent—affect the undoubted appeal the picture possesses.

With the onset of the winter season, it is a sound practice to go through the collection of negatives and small prints made during the past summer and pick out any outstanding examples, such as this may have been, with a view to making pictures of them by enlargement. The small print may serve its purpose well enough, but it is not adapted for exhibition, nor is it of a size to warrant framing and hanging at home.

The process of enlargement brings out the pictorial qualities of a subject in the most surprising way, and, as the making of pictures by photography is the end which these articles are designed to encourage, recourse to enlarging is strongly advocated as soon as a reasonable measure of technique in negative and print making has been acquired. There is no fault to be found with the example under discussion in these respects, and, as far as can be seen, its definition is good enough to stand any degree of enlargement that is likely to be required.

### Pictures by Enlargement.

It might be as well, therefore, to make a beginning at enlarging with such a print as this. Except for the necessity of using a lantern and easel in place of the printing frame, there

is little difference in procedure. Focusing and determining the amount of the picture to be included demand care and thought, but development, fixing and washing are governed by the same rules that apply to the making of contact prints, although, as a rule, the printing papers are faster, and require to be handled in a yellow light, and development takes a longer time.

The necessary instructions are provided by the manufacturers with every packet of paper, and technical considerations are discussed from time to time elsewhere in this journal. Further help, too, could be obtained through membership of a photographic club, and, in this event, it is likely that what is necessary in the way of apparatus would be available.

"Aylesford Bridge," as it happens, is a subject that does not need any trimming. In fact, a fraction more on the left and top would be advisable, but in the case of No. 2, "Country Scene," by G. Furnish, which is also a highly attractive subject, it would, perhaps, be desirable to trim three-eighths of an inch from the base.

### Needful Adjustments.

Here it is the fine form and tone of the cloud that makes the picture. The interest lies in the sky rather than in the landscape, and by reducing the amount of space devoted to the latter the value of the cloud is intensified.

If the cloud were not so imposing and the sky were not so important, the pictorial proportions would not need to be altered, but, with things as they are, it would be wise to restrict the amount of foreground, and, in the enlargement, to include all the sky and limit the landscape in the same relative proportions. The subject is excellent, and, provided the final impression retains a full degree of quality, it should make an exhibition print well up to the average standard.

Nos. 3 and 4, "Lincoln," by C. D. Hunter, and "A Spanish Cloister," by W. G. Mills, are somewhat similar in nature, for they both present a vista seen through an archway. Both convey a sense of sunniness, and, with the exception that each seems slightly

under-printed, the workmanship is perfectly adequate. There is, however, a regrettable lack of tone in their skies, and it is doubtful if, even when printed to a more suitable depth, this defect would be corrected.

### Drawbacks and Deficiencies.

A deficiency of this character is scarcely likely to be remedied by the process of enlargement, though it is possible, assuming that it is within the capacity of the worker, to make a measure of adjustment by the exercise of control, either in the form of shading the remainder of the print while the printing of the sky is carried farther, or by the local application of pigment after the print has been made.

Nevertheless, it is better far that the necessary degree of tone should be obtained by straightforward means, not because of any objection to control if it achieves its end, but because it is so much easier, and because it is rarely feasible to make such adjustments with the same truth of rendering that photography alone can achieve. If the modern panchromatic plates or films are employed in conjunction with filters of properly adjusted characteristics, it will be found that an adequate measure of sky tone is almost invariably recorded, and, even with such difficult subjects as Nos. 3 and 4, a considerable improvement might be expected.

Any deficiency of tone in the sky is a fatal drawback in a print with any pictorial pretensions, and, in No. 5, "Over the Kiel," by C. Parker, its absence is severely felt.

### Strength and Vigour.

Given a little more strength of presentment, a decent sky would mean the making of this subject into an attractive picture, for the pattern of of the bridge is interesting, and, against a dramatic sky, it could be made to tell with fine effect.

"A Monument of Ancient Times" (6), by Miss E. M. Sheppard, shows a marked advance in its tonal scheme, and, technically, it is far superior. The sky, too, is good, but, while as much as could be made of the subject has been made, it suffers somewhat from the trim and formal nature of the surroundings. "MENTOR."

NOTES AND NOTIONS FOR THE  
LESS ADVANCED WORKER

Every week an article will appear under this heading dealing with a topic of interest to the novice in photography.

## VARIATIONS OF A SUBJECT.

ONE of my favourite gramophone records is a series of variations on an air. It is a simple melody, and I can follow it through most of the variations; but in a few of them I cannot trace it at all. I think I might find it if I could play the record backwards. It is equally possible to make photographic variations of a subject, and to find some of them almost or quite unrecognisable as a version of the original.

An extreme case is that which has been adopted for puzzle competition purposes; the most familiar, everyday articles are photographed from such unusual viewpoints that the results are extremely puzzling.

Position of viewpoint in relation to the subject is what makes the greatest difference in the rendering. Even a slight shift may cause an

astonishing change. Both distance and angle of view play their part, and experienced picture-makers always bear these facts in mind.

An old photographic friend of mine used to adopt almost the reverse method. He would set up his whole-plate camera more or less in the open, say in a woodland clearing, put his head under the focussing-cloth, and slowly revolve the camera on its turntable until he had completely boxed the compass. He said he never missed anything this way; but to be frank he seldom hit much either. In any case he was looking for different subjects rather than for possible variations of the same one. To do this it is generally a question of the subject remaining still, and the photographer scouting round and about it.

Another familiar example of variations of the same subject is the effect of seasonal changes—the same subject, say, in summer and in winter. Full foliage and sunshine in one case, and bare boughs and snow in the other, make vast differences.

Conditions of lighting also play an important part, and atmospheric circumstances are also of considerable importance.

Combinations of these causes of variations may make astonishing transfigurations; but on the whole I think that viewpoint—both distance and angle—is the most important factor of them all.

Recently I spent nearly three pleasant hours—including intervals for rest, refection and reflection—in the picturesque little town known as Corfe Castle. It is a much-photographed place, and most of the views have become stereotyped. Yet what must I do but lead off with the most hackneyed one of all. Everybody takes it. A car would pull up in the road, someone would stand up in it with a camera, take a pot shot, sit down, and drive off all inside half a minute. This apparently went on all day.

As I finished my first shot there strolled up a friend whom I see only about once a year, and who lives more than a hundred miles from me. He was complaining because the sun was too full on this threadbare subject, as indeed it was. But even then it is inevitable that the

sun cannot shine full on every subject at the same time; nor can it remain full on any one subject for ever.

The Castle is the outstanding object at Corfe, especially as its remains are on a hill; but the "Greyhound," although on low ground, runs it close. In certain respects it is far more useful and popular. So, full light or not, I took Fig. 1. Some time later, I took Fig. 2, and it is very obvious that the main subject material is the same in each. Yet I consider the second better than the first.

In the short interval the angle of the light had somewhat changed, but it made a good deal of difference. Note, for example, the wall of the projecting wing of the building on the right. Elsewhere, too, the shadows have increased in area, and give more relief and variation. The main tower of the Castle has been shifted to the left, and it is now balanced by the part of another inn brought into the picture space on the right. All the variations are the result of a short interval in time, and a slight shift in viewpoint.

To this viewpoint that of Fig. 3 is almost at right angles. It brings in a group of picturesque cottages more or less in shadow, providing contrast with the white walls of the inn. Fig. 4

shows differences also due to similar slight alterations in time and position. In Fig. 3 there is a monotonous area of foreground; in Fig. 4 this is broken up by figures and a useful cast shadow.

The single illustration shows a characteristic bit of the same "Grey-

hound"—across the light, but with the sun more ahead instead of somewhat behind.

No two of the five versions are the same, yet they were taken within a short space of time, and all the viewpoints are within a few yards of each other.

## Tank Development for Film Packs

By  
CHRISTOPHER KIRK.

THE amateur who uses film packs will not take long to realise the advantages of a tank for their development.

Film packs are expensive, and unless considerable care is taken when developing the films in a dish, scratches and markings will occur very easily. Tank development is quite simple if the same routine is carried out each time. As the proceedings are done preferably in total darkness, everything must be in its place on the work-bench, to be readily accessible, before work is begun.

My method is as follows: The developer and hypo kept ready made up are brought to an even temperature—about 65 degrees Fahr. A sheet of newspaper is laid on the bench and on it are placed the rack, the sheaths, the lid of the

tank and the pack to be developed, still in its wrapper. Two dishes are put on the bench, and in one is placed the bottle of developer, the tank, and a thermometer, and in the other the bottle of hypo. The tank is filled with the developer and its temperature noted. A large funnel is placed in the developer bottle, for use later on.

When everything is ready the light is switched off and the film's are loaded into the sheaths and placed in the rack. The rack is then raised and lowered several times in the developer to remove any air-bubbles, and the lid put on. The light is now turned up and the time noted. While development is proceeding the tank is reversed and shaken at frequent intervals.

When the time for development is up the light is switched off and, holding the tank with the bottom outlet screw upwards the screw cap is removed. I then close the hole with my finger, and holding the tank over the funnel, carefully remove the lid, and allow the developer to run back into its bottle. (Remember to filter it before using again.) After a little practice this will be found quite easy. If any of the developer spills it will be caught in the dish.

The films are next given a rinse by filling and emptying the tank several times with water. After rinsing, the tank is put in the dish with the hypo bottle and the hypo poured in, remembering to replace the screw cap on the tank first. When fixed for the correct length of time the films are given their final hour's washing in the tank. Remove the bottom screw cap for this so as to allow the heavier hypo-laden water to escape.

Do not use an acid hypo in the tank. It may remove the nickelling from the inside and small particles of plating will settle on the films with disastrous results. Plain hypo without any potassium metabisulphite will work just as well, but discolours quickly. Unless it is used for a second batch almost at once, it should be thrown away, and a fresh bath made up. After use, dry the tank very thoroughly and place it and its parts in front of a fire to remove all traces of moisture.

# Picture Points

## for Beginners, No. XXIV,

### Advantages of Low Lighting

**T**O compensate for the shorter days at this time of the year and in the spring, we can get some very interesting lighting effects, particularly when the sun is shining.

Although the actinic power of the light is now considerably weaker, we have soft lighting effects that are quite different from the comparatively hard summer light, and this is mainly due to the lowness of the sun. If we compare the two sketches we can see how this low lighting can be used to advantage.

The first illustration is typical of a landscape under a summer sun, high in the sky, with the subject matter generally flat. In consequence, we get very little cast shadows to relieve the bareness, and if there are no contrasting tone values to give variety to the picture, it is hard, flat and ugly.

In the same way that a side lighting is best for subjects of low relief, so is the low sun best for such landscapes which are flat or slightly undulating.

For outdoor portraiture and animal work, too, it is surprising what fresh modelling a low sun will reveal. The sun is so weak now, that it is quite safe to attempt portraiture in the direct sunlight.

The second sketch shows the same subject under a low lighting. The whole aspect is changed, simply because of the long, low slanting shadows cast by the trees, which not only give a dark foreground, but help to "break" up the blank light areas of tone.

by RICARDO

### Making the Most of Trees in Winter Landscapes

**I**T is a good sign of enthusiasm when the novice carries on with the camera after the summer and autumn months are over, particularly with outdoor work. There is much to be observed and learnt with

winter photography, and greater credit must be given for successful interpretation of the less cheerful weather.

There are several points to be considered in winter landscape work, and perhaps the most usual error the beginner makes is when trees are included in the same way as in summer snaps. When the foliage is full, we have large masses that lend themselves well to the general composition, but when the branches are bare, they become exceedingly difficult to portray, without a considerable amount of hand and control work in the printing, to prevent them from being distracting and scratchy.

For instance, trees like those in the top sketch could be made to look quite interesting in the summer-time, but now the bare branches and twigs are much too niggly and spoil whatever grouping we might make. If the sky were dark or blue we could soften out the contrast of the branches, but where this cannot be done it is preferable to leave most of the branches out of the picture space and make the most of the trunks and roots for the mass effect. The lower sketch shows how this can be done. Keep the camera low to give a low horizon, and since there are few straight verticals to be seen, a slight upward tilt of the camera does not matter.

### Grouping and the Importance of "Direction"

**J**UST as we have perspective or "direction" in a road or pathway, so are our eyes attracted by the "direction" of smaller objects. A walking-stick lying on the table urges us to look along in the direction from the handle to the ferrule, and the same applies to numerous objects that are either long in shape or are used in a certain way, such as a jug, a pen, or even a vase.

In the first sketch, the dotted lines and arrows indicate the directions of the two outside objects, and this shows why such a group is badly arranged. Each one is competing with the other for direction, and consequently, the whole effect is disturbing instead of being restful.

Let us rearrange the same articles so that the perspective of each is in harmony with the other, and in the right-hand sketch we can now see how this has been obtained.

There is still variety in the grouping with only one main point of interest, the foremost glass bowl. Another point to consider with articles of this nature is that when they are placed in a different position to that for which they are intended, such as the glass bowl in the left-hand sketch, they must not be left unsupported, as it gives a feeling of insecurity and so spoils the general effect. Notice, too, in the improved arrangement how the background is in keeping with the subject matter, and how the tone on the right repeats the vase on the left.

# Amateur Cinematography

NEWS, NOTES AND MATTERS OF INTEREST FOR ALL CINEMATOGRAPHERS USING AMATEUR CINÉ APPARATUS.

## Amateurs are the *Avant-Garde* By M. A. LOVELL-BURGESS.

**A**RE ciné amateurs contributing anything worth while to the future of the film?

Sir John Hammerton, the well-known writer and editor, who before a visit to Spain last month spent well over £200 on amateur ciné equipment for his own use, recently addressed the members of a literary circle on the future of the film.

"Technique is enormously ahead of content," said this lecturer. "The time will come when content will march with technique. Until then we are only at the beginning."

As I listened it seemed to me that this opinion had a particular significance for ciné amateurs, because the improvement and development of technique is, for financial reasons, largely beyond their control, but the improvement of film content does very definitely come within their province.

As a writer who has had insight into the making of professional films—he took a prominent part in the making of the film, "Forgotten Men"—Sir John Hammerton is well able to judge film progress in all its phases. On this occasion he agreed with me that the film's primary purpose is to entertain, but he holds that the cinema will have to cease its borrowing from books and plays. After all, in your own experience, when did you know a translation ever catch the spirit of the original? Is not the extraordinary success of Walt Disney largely due to the fact that he formulated something native, as it were, to the screen?

At the moment I can think of only one novelist—Hugh Walpole—who writes scenarios. There are, of course, heaps of professional scenarists, but most of them have begun at the wrong end; they are scenarists before they are artists. The result is that, although their scripts are perfect from a technical standpoint, their characters are stock characters. On the one hand you have these hundreds of young people who have mastered the technique of film production only to find they have no story to tell, and on the other hand are the born story tellers of the world dumb in the presence of a new art medium. Meanwhile Hollywood continues to fall back on plays and books for screen material.

What is meant by the "content" of a film? Action must, for the purpose of presentation, have a beginning and an ending. In other words, you must have

a story. That story will fall naturally into sequences which roughly correspond with chapters or episodes. All audiences consciously or subconsciously play a part. They are prepared to accept the obvious limitations of the screen, and to believe that what they see depicted on that square space is really drama, or comedy, or whatever it may be. Whether colour films will help—as much as sound has done—in creating that illusion remains to be seen, but audiences must be given plenty of aids to the imagination. The outstanding imaginative forces in film-making are rhythm, produced by cutting, symbolism, the skilful handling of light and shade to produce contrast, and the use of silence.

In his lecture Sir John ranked Rene Clair chief among film producers by reason of his handling of spacious tracts of silence. And this producer, remember, was originally a pioneer ciné amateur.

At the moment the making of a film too much resembles a jig-saw puzzle. Hosts of experts and specialists each have

their tiny part in the whole, and the result is magnificent technique, and no personality. It will only be when the born story writer learns to think and visualise in terms of the screen, when imagination and technique merge so imperceptibly into one that they are seen to be but aspects of the one identity, that film content will match technique. It may even be possible that the perfect story film will not be achieved until the story writer is his own producer. But certainly the story writer must learn to think and express himself in terms of filmic art just as writers have to study stage technique, and present their story in play form for stage production, without relying on translators or interpreters.

Perhaps the reason why story writers are so slow to learn this new art language is that the film is the one art in connection with which there are few opportunities for academic study. It is almost impossible for the average person to compare films over any period of years and to relate their findings to them.

A sunny November morning in Trafalgar Square. An excellent action subject for the amateur cinematographer is always available at this spot on any fine day.

There is, therefore, every reason why ciné amateurs should form the *avant-garde* of all film students. The club amateur is in the happy position of being able to acquire technique, to

dabble in all departments, to learn by actually making films how to express action and imagination objectively, and finally to compare his films with those of others.

Ciné amateurs, especially club amateurs, are the really film-minded people of this generation. It is for them to aim at helping to make film content keep pace with film technique.

# On Using Panchromatic Film

A Note for the Beginner.

By P. H. BRAITHWAITE.

THE advantages of using panchromatic over ordinary orthochromatic film stock are many, and its worth proven when using it on difficultly lit subjects in late autumn or for cloud studies.

The film's emulsion undergoes chemical changes when subject to light, which upon development changes the silver deposit to a density proportionate to the amount of light that has acted upon it. Colours do not actually affect the film to the same extent or in a like manner as they do the human eye. Yellow light, for instance, although very bright to the eye, has little effect on ordinary film emulsion.

In order to obtain correct rendering of all colours, film emulsion should so react under different hues that the silver layer should have its greater density in the yellow, with a lesser density in orange and green and lesser still in blue and red, to enable the consequent positive print or reversion to yield the yellow as the most transparent and consequently the brightest upon projection.

With ordinary ortho emulsions this does not happen. Actually, orthochromatic emulsion is affected proportionately greater by blue light than by any other of the whole range of colours, producing a screened film which is translated in shades of grey, brighter in the blues. Orange and red render black. Such renderings are, of course,

contrary to the true visual appearance of scenes or objects.

The panchromatic film has brought to the cinematographer the possibility of more artistic photographic perfection, enabling him to obtain more correct rendition by not only presenting similarity of form of the object filmed, but in reproduction of colour as it conforms with the impression each colour makes on the human eye.

Ordinary and panchromatic films differ solely in their sensitivity to different colours, the sensitivity of the latter representing an increase over the former to the orange and red rays and no diminution of sensitivity to blue rays. In adopting panchromatic film the cinematographer has no difficulties to overcome, although its use entails care both in exposure and dark-room handling. In exposure, panchromatic demands the same judgment of light values as with ordinary film, with consequent correct lens diaphragm setting.

To enable the diminishing of blue and violet colourings, it becomes necessary to filter them through specially prepared transparent pieces of gelatine or glass. The dyes used in making these filters have the property of absorbing the blue rays to an extent dependent upon the nature of the dye. When used before the camera lens, these filters may absorb as much as 60 per cent of all blue radia-

tions and letting through approximately 80 per cent of all radiations pertaining to the remaining colours. Actually, filters consist usually of gelatine cemented between two pieces of optical glass, and can be purchased in varying degrees of colour density to conform with the particular brand of film being used or the particular subject being filmed.

The necessary increase in exposure for each filter is supplied by the manufacturers in the form of a filter factor, which is the number by which the normal exposure must be multiplied to obtain successful correction.

In the dark-room, panchromatic film must not be exposed to the usual red light or fogging will result. This precaution is plain to see when it is remembered that the emulsion is sensitive to all colour radiations. Development must be undertaken either in complete darkness or with the use of a dull green light marketed specially for this purpose.

The makers, however, free the amateur from all processing details which panchromatic film involves by undertaking it for him.

Panchromatic film lends itself admirably to late autumn work, particularly outdoors, where the little extra cost of film-stock and additional care in filming are amply repaid in the pleasing results obtained, both in regard to speed and colour rendering.

## Exhibition of Cinematography at the Royal Photographic Society, 35, Russell Square, London, W.C.1

OPENED on the 9th November by Mr. A. C. Cameron, the third exhibition of Cinematography at the house of the R.P.S. will remain open daily until the 30th November, from 10 a.m. to 9 p.m., with the exception of Tuesdays, Fridays and Saturdays, when it closes at 6 p.m. to allow for meetings. Admission is free.

Arranged by the Cinematograph Group of the Royal Photographic Society, this exhibition covers almost every phase of cinematography for the professional and amateur alike. On the ground floor there is a series of photographs illustrating the life of a film, from its manufacture through its many stages of preparation, production and editing, to its final projection. Large "stills" taken during the production of many recent British films, together with a selection from the amateur societies and clubs, are to be seen on the first floor in the lecture room.

In connection with the exhibition a competition was organised for the best sub-standard ciné films made by professionals and amateurs, in three classes.

Many entries of a very high standard were received, for

which two plaques and twenty-three certificates have been awarded. Plaque, Class I, open for all subjects, was awarded to Mr. Arthur G. Greaves, for a 16-mm. film, "The Seven Spirits of the Rainbow," and the plaque for Class II, limited to scientific and nature studies, was awarded to Mr. John Chear, for a 9.5-mm. film, "Birds of Our Garden."

Well-known manufacturers of ciné apparatus and material complete the exhibition with a display of cameras, projectors, lenses, tripods, screens, exposure meters, etc., on the second floor, for both professionals and amateurs. There is also to be seen on this floor an interesting show of ciné material, actual examples of stock showing all the different methods of processing, different size films, sound-on-film in black-and-white and in the latest development of colour processes.

Altogether it is a highly interesting show that should not be missed by any keen ciné worker. Readers should note there are lectures on each of the remaining Fridays and Saturdays. These are open free to non-members. Application for seats should be made early to the Secretary at the above address. No charge is made for reservation.

# The Week's Meetings

*Societies will have their meetings announced here if the syllabus is sent to us at the beginning of the session or from time to time.*

## Wednesday, November 20th.

Bayswater and Paddington P.S. "Prowling for Pictures." Dr. H. B. Newham.  
Bethnal Green C.C. "The Chemistry of Photography."  
Birkenhead P.A. "The Spider as an Engineer." F. Saxby.  
Birmingham P.S. (Ciné Sec.). "Display of Holiday Competition Films."  
Borough Polytechnic P.S. "Third Slide Competition, 1935."  
Brighton and Hove C.C. "Gevaluxe Velours." R. S. Beck (Gevaert).  
Carlisle and County A.P.S. "Development of the Photographic Lens."  
Cheltenham A.P.S. "Enlarging." G. F. Harris.  
Coventry P.C. "Why I Prefer Quarter-plate or Larger." M. E. Parker.  
Croydon C.C. "The Pilgrims' Way through Surrey." Herbert Pickwell.  
Dennistown A.P.A. "Portraiture." John R. Brinkley.  
Edinburgh P.S. "Talk on Landscape Photography." A. W. Hill.  
Galashiels C.C. "Slide-Making, Why and How." John T. Knight.  
G.E. Mechanics' I.P.S. "Colour Photography."  
Handsworth P.S. "Nature—Wonderful and Beautiful." H. Thompson.  
Ilford P.S. "Picture-Making by Photography." S. Bridgen.  
Northallerton and D.P. and C.S. "Y.P.U. Slides, 1935."  
Partick C.C. "Lecturette Night."  
S. Suburban and C.P.S. "Some Considerations in Portraiture." Miss D. Galloway.  
Stockport P.S. "Mistakes that I Have Made." Members.  
Worcestershire C.C. "Members' Evening." Open Print Evening.

## Thursday, November 21st.

Accrington C.C. "British Rock Climbing." Cliff Downham.  
Armsley and Wortley P.S. "Valuable Tips (from 30 Years' Experience)." E. S. Bottomley.  
Aston P.S. "A Holiday in the Isle of Wight." W. T. Gavin.  
Bolton C.C. "Members' Autumn Exhibition." Criticism by T. Lee Syms.  
Bury P.S. "Gaslight Printing Demonstration."  
Cardiff C.C. "Siemens and Halske 16-mm. Ciné Apparatus Demonstration."  
Cardiff N.S.P.S. "Siemens and Halske 16-mm. Ciné Apparatus Demonstration."  
Coatbridge P.A. "G.D.U. Portfolio."  
Derby R.I.P.S. "High-speed Photography." F. G. Carrier.  
Greenock C.C. "Historical Landmarks in Renfrewshire." J. B. Scrymgeour.  
Hammersmith H.H.P.S. "Projection of Two Ciné Films."  
Huddersfield N.P. and A.S. "Romantic Italy." Alex. Keighley.  
Hull P.S. "The Amateur Photographer and Cinematographer" Prize Slides.  
Ipswich and D.P.S. "Bromide Paper and its Uses." S. Bridgen.  
Keighley and D.P.A. "Wild Life at Home and Abroad." F. H. Edmondson (Film).  
Letchworth C.C. "E. A. F. Slides."  
Liverpool A.P.A. "With Car and Camera in Scotland." G. Wheelton.  
Loughborough P.S. "Enlarging." President.  
Newcastle and D.A.C.A. "Projection of Four Films."  
N. Middlesex P.S. "Ten Thousand Miles with Two Babies." P. B. Dannatt.  
Oldham P.S. "Colouring Slides (Demonstration)." W. J. Rothwell.  
Singer C.C. "Gaslight Printing." J. M. Morrison.  
Sunderland P.A. "The Application of Photography to Shipping." J. H. Cleete.  
Tynemouth P.S. "Art of Lantern-Slide Making." W. J. Brown.  
Wimbledon C.C. "Floral Art." R. A. Birch.  
Woolwich P.S. "More Historic Kentish Homes." E. R. Bull.

## Friday, November 22nd.

Bethnal Green C.C. "Reducing and Intensifying. Various Methods." J. Fisher.  
Bolton C.C. "Members' Exhibition."  
Brighton and Hove C.C. "Annual Dinner."  
Bristol and W. of E.A.P.A. "Facts and Fallacies." V. Turl.  
Chelmsford P.S. "General Subjects. Alliance Folio."  
Colne C.C. "A Second Search of the Sun." W. P. Brotherton.  
Desborough and D.P.S. "Competition: Night Photography of any Subject."  
Harrogate P.S. "More Rambles with my Camera." H. E. Illingworth.  
John Ruskin C.C. "Composition." W. A. Wilson.  
King's Heath and D.P.S. "Preparation of a Print for Exhibition." F. Green.  
Leigh and L.S.P.S. "Press Photography for the Amateur." F. G. Curson.  
Leytonstone and Wanstead C.C. "Combination Enlarging." C. Crosby.  
Royal P.S. "Some Aspects of Sound Photography." B. C. Sewell.  
St. Helens C.C. "Closing Date for Entries for Members' Exhibition."  
Sheffield and Hallamshire P.S. "Social Whist Drive."  
Southend-on-Sea and D.P.S. "Printing." H. W. Bennett.  
Wimbledon Ciné C. "Films by Wallacey A.C.C."

## Saturday, November 23rd.

Ashton-under-Lyne P.S. "Jubilee Year Exhibition of Members' Work."  
Hammersmith H.H.P.S. "Criticism of Monthly Competition." W. Mottram.  
Northamptonshire N.H.S.P.S. "Ramble by the River to Clifford Hill."  
Royal P.S. "Criticism of Selected Competition Films by Paul Rotha."

## Sunday, November 24th.

Camberwell C.C. "Ramble: Wimbledon."  
Todmorden P.S. "A Norwegian Cruise." S. Fielden.

## Monday, November 25th.

Bexley Heath P.S. "Lectures by Members of St. Bride P.S."  
Blackburn and D.C.C. "Two Days in Lakeland." F. Sellers.  
Blackpool and Fylde P.S. "Printing and Enlarging—Description of Papers."  
Bournemouth C.C. "Print Competition."  
Bourneville C.C. "Coventry, Ancient and Modern." Ll. Evans.  
Bradford P.C. "A Tour through Central Europe." R. L. Hutton.

## Monday, November 25th (contd.).

Chelsea P.S. "The Countryside of London." S. P. B. Mais.  
City of London and C.P.S. "Combination Enlarging." Mr. Ginger.  
Dewsbury P.S. "Y.P.U. Slides, with Criticism." J. C. Holmes.  
Edinburgh P.S. "Entries Close for Members' Exhibition."  
Erdington and D.P.S. "Photographic Alliance Competition Slides, 1935."  
Glasgow and W. of S.P.A. "X-ray Demonstration at G. and W. of S. Radium Institute."  
Keighley and D.P.A. "Y.P.U. Trophy Prints."  
Kidderminster and D.P.S. "Recent Ciné Films." P. Dougall.  
Kingston C.C. "Autolycus in East Anglia." G. E. W. Herbert.  
Lancaster P.S. "Lantern Lecture by Mr. J. Row."  
Leeds C.C. "Social Evening—Whist Drive."  
Leeds U.P.S. "Enlarging." G. Denham.  
Newcastle (Staffs) and D.C.C. "Some Slides, Old and New." W. A. Watson.  
Oldham E.P.S. "Toning a Print." J. Langshaw.  
Oxford P.S. "Demonstration by the 'Epidiascope.'" W. Trevor Jones.  
Sheffield and Hallamshire P.S. "Development of Photographic Lenses." A. Siddall.  
Shropshire P.S. "Competition: Pictures of Shrewsbury."  
Southampton C.C. "Whist Drive."  
Southport P.S. "Photography as an Artistic Medium." J. H. Mowels.  
Walsall P.S. "The Coast of Cornwall." Bernard Moore.  
Walthamstow and D.P.S. "Home Portraiture." S. Bridgen.

## Tuesday, November 26th.

Ayr A.P.S. "Leica Exhibition."  
Birmingham P.S. "Photographic Alliance Competition Slides, 1935."  
Blackpool and Fylde P.S. "A Trip to Egypt." Richard Sheridan.  
Cambridge P.C. "Bromoil." H. Kershaw (Kodak).  
Cardiff N.S.P.S. "Visit to Western Mail."  
Doncaster C.C. "By Wood and Moorland up the Hebden Valley." (Y.P.U.).  
Dunfermline P.A. "The Amateur Photographer" Prize Slides.  
Exeter C.C. "Improving Backgrounds." C. H. Stokes.  
Hackney P.S. "Architecture and Sunlight." E. R. Bull.  
Halifax P.S. "Contact Printing." J. Braithwaite.  
Hamilton P.S. "Retouching Bromide Prints." J. Steel.  
Harrow C.C. "Anecdotes plus Some Puzzles." Geoffrey E. Peachey.  
John Ruskin C.C. "Work Night."  
Kilburn and Willesden P.S. "Chloro-bromide Printing." E. I. Ellick.  
Leeds P.S. "Criticism of Members' Prints." W. E. Gundill.  
Leicester and Leics. P.S. "M.C.P.F. 1935 Competition Prints and Slides."  
Manchester P.S. "Intensification and Reduction." C. W. Bradley.  
Manchester A.P.S. "X-ray Photography." Dr. G. Jessel.  
Monklands P.S. "G.D.U. Portfolio."  
Morecambe and Heysham and D.P.S. "Enlarging."  
Nelson C.C. "From Liverpool to Vancouver" (Ciné). E. S. Maynard.  
Newcastle and Tyneside P.S. "On Getting About—a Back Chat."  
Nottingham and Notts P.S. "The Way of the Lovely Sky." Capt. A. G. Buckham.  
Pontefract P.S. "Exhibition and Selection of Prints for the Y.P.U."  
Portsmouth C. and Ciné C. "Toning and Staining." (Burroughs Wellcome).  
Rugby and D.P.S. "The Science and Art of Photography." III—The Taking of the Photograph.  
St. Bride P.S. "Carbro." J. Lemon.  
Sheffield P.S. "Members' Contact Print Competition."  
Small Heath P.S. "Monthly Competition—Slides." J. O. Wilkes.  
South Shields P.S. "Panchromatic Plates." Burdus Redford.  
Stafford P.S. "Making the Exhibition Print." S. T. Bridgen.  
Stockport P.S. "Exhibition Opens."  
Warrington P.S. "Warm Tones on Bromide and Gaslight Papers." G. Lee.  
Whitehall C.C. "Canada." Brian Cook.  
Wood Green P.S. "How to Use an Enlarger." J. Gorse.  
York P.S. "Art and Composition in Photography." H. H. Featherstone.

## Wednesday, November 27th.

Aston P.S. "Inter-Club Competition at Handsworth P.S."  
Ayr A.P.S. "Council Meeting."  
Bethnal Green C.C. "Practical Work."  
Birkenhead P.A. "A Holiday in the Cotswolds and Mendips." G. J. de la Mare.  
Birmingham P.S. (Ciné Sec.). "A Night of Films and Music." A. G. Ratcliff.  
Borough Polytechnic P.S. "Two Thousand Years in Three Months." Kenneth Baker.  
Brighton and Hove C.C. "Miniature Cameras." R. M. Fanstone.  
Bristol P.S. "Off the Lizard in a Pilot Boat." James Randall.  
Carlisle and County A.P.S. "Monthly Print and Slide Competition."  
Chorley P.S. "Gothic Architecture." Capt. J. C. O. Dickson.  
Coventry P.C. "Preparation of a Print for Exhibition." Fred Green.  
Croydon C.C. "With a Ciné-Kodak by Day and Night." F. G. Newmarch.  
Dennistown A.P.A. "Jumble Sale."  
G.E. Mechanics' I.P.S. "In and Out of Bruges." G. E. W. Herbert.  
Ilford P.S. "10,000 Miles with Two Babies." P. B. Dannatt.  
Kodak Works P.S. "People I Have Shot." James Jarché.  
Leek P.S. "Making the Exhibition Print." S. Bridgen.  
Northallerton and D.P. and C.S. "Duafaycolor Demonstration." Dr. W. C. Fothergill.  
Northamptonshire N.H.S.P.S. "The Enlarged Print." H. E. Cooper.  
Partick C.C. "Panchromatic Work." R. Stewart.  
Phoenix C.C. "G.D.U. Slides and Colour Slides."  
S. Suburban and C.P.S. "The City of St. Swithin." C. H. Oakden.  
Worcestershire C.C. "Yugoslavia." B. Brotherton.

# Readers' Questions ANSWERED

GENERAL.—All communications for the Editor should be addressed: "The Editor, *The Amateur Photographer and Cinematographer*, Dorset House, Stamford Street, London, S.E.1," and in every case, without exception, must give the name and address of the writer.

CONTRIBUTIONS.—The Editor is glad to consider original, up-to-date manuscripts on photographic subjects. All contributions must be typewritten, or in very legible handwriting on one side of the paper only. Letters or communications arising out of matters already appearing in the paper are not paid for. The Editor disclaims legal responsibility for the safety of matter submitted to him, but he will endeavour to return rejected manuscripts, etc., when a stamped addressed envelope is enclosed. MSS. or prints that are not actually accompanied by a stamped wrapper or envelope can in no case be returned. Reproduction fees for prints are only paid by arrangement beforehand. The sending of a print, without any condition stated, will be taken as permission to reproduce it without fee.

ENQUIRIES AND CRITICISM.—Advice, Criticism and Information are freely given, but the following conditions should be read carefully before applying, as any communication which does not comply with the rules must be ignored.

(1) See "General" above. (2) Every question and every print for criticism must be sent separately through the post, and must be accompanied by a separate stamped addressed envelope. No exception can be made in any case to this rule, except so far as enquiries or prints from Overseas are concerned. (3) Neither enquiries nor prints for criticism must be enclosed with competition prints. (4) On the back of each print for criticism, in addition to the name and address of the sender, must be the title (if any), and the criticism coupon from the current issue. (5) Enquiries should be clearly written, on one side of the paper only, and should be specific and not general. Such enquiries as "How can I take interiors?" or "Can you give me some hints on outdoor portraiture?" are too general to be dealt with in this section. (6) All envelopes should be distinctly marked "Query" or "Criticism" as the case may be. (7) Prints are sent for advice or criticism on the distinct understanding that by so doing permission is given for their reproduction without fee. We endeavour to deal promptly with enquiries, but cannot undertake to answer by return of post, nor can we give precedence to any enquiry.

A selection of those replies is printed each week, but all questions are answered by post. Enquiries from abroad must contain a coupon also, but it need not be from the current number, and should be cut from the latest issue to reach the enquirer.

## Black Edge.

How can I obtain black edges to my bromide prints like many seen in exhibitions?

R. R. (Oxford.)

The usual way for enlargement purposes is to cut a piece of opaque card slightly smaller than the final trimmed size of the enlargement, and then, either before or after the exposure is made, place it in good contact on top of the bromide and, with the negative removed from the carrier, expose the remainder of the bromide to the white light for a second or two. On developing out the edges will be black. If contact prints are made from film negatives, the film is cut slightly smaller than the paper, which gives the same result.

## Prints for Criticism.

May one send prints for criticism under a *nom de plume*?

S. N. (Surrey.)

We assume that a *nom de plume* is desired should prints be published, but as prints marked for "criticism" are never reproduced, and should always be accompanied by a stamped addressed envelope, there is, of course, no need for a pen-name.

## Infra-red Work.

Is it possible to sensitise ordinary panchromatic plates so that they become suitable for infra-red work? If so, how is it done?

F. G. T. (London.)

This can certainly be done, although in inexperienced hands the plates are not likely to give such good results as the various plates and films commercially produced for the purpose. Further, there is a great deal more involved in this kind of work than the mere sensitising of plates, and if you are thinking of experimenting in this direction we would strongly advise you first to study "Infra-red Photography," by S. O. Rawling, published by Messrs. Blackie & Son at 3s. 6d.

## Back Focus.

What is meant by the "back focus" of a lens? Is it different from the focal length marked on the lens?

S. A. (Luton.)

There is often a considerable difference between the two figures. The point from which the focal length of a lens has to be measured may lie in one of the glasses, somewhere within the lens mount, or, in the case of telephoto lenses, outside (and in front of) the whole lens system. The so-called back focus is the distance from the back surface of the lens to the focal plane, when the lens is focussed for infinity. A 12-in. telephoto lens may have its back element only 6 in. or so from the focal plane; a 12-in. single lens would probably have 12-in. back focus.

## Anhydrous Salts.

I know that with anhydrous sodium sulphite I ought to take only half the weight stated for crystals; does this apply also to sodium carbonate?

O. E. E. (Carnarvon.)

No. Roughly speaking one part of dry carbonate is equivalent to 2½ parts of the crystals. Put the other way, you would be safe in taking two-fifths of the number of grains stated for crystal sodium carbonate if you use the dry form instead. A common figure given is 160 grs. instead of one ounce.

## Blanchard Brush.

I find that a Blanchard brush is recommended for applying sensitiser to paper, but no shopkeeper I have asked has ever heard of it. Where can I buy one?

J. P. (Bodmin.)

We have never heard of the "brush" being sold; it is easily made. Take a strip of glass, say 6×3 in., and over one end put a strip of soft flannel (in this case 3 in. wide) folded double, and secured to the glass with an elastic band. If the flannel is taken off and well rinsed and wrung after use, it will last a long time.

## Water Varnish.

Can you give me a formula for preparing water varnish for treating small film negatives?

R. J. L. E. (Hastings.)

Make a saturated solution of sodium carbonate. In 8 oz. of this put 1 oz. of shellac, and allow to stand for at least twenty-four hours. Pour off the liquid, and replace it with the same volume of water. Boil until the shellac is completely dissolved, and bottle. After a time it becomes clear, and is then ready for use.

## Permit.

Where can I get a permit to take photographs in St. Paul's Cathedral?

W. N. (Norwich.)

From the Dean's Verger, or his representative at the Cathedral. A fee of half-a-crown per day is charged, and obstruction and interference with services, etc., must be avoided.

## Stop Numbers.

I send details of the focal length and the stop numbers marked on the lens of a camera I have bought. I cannot make head or tail of them. Can you assist me?

F. S. T. (Hythe.)

The numbers indicate the actual diameter of each stop in millimetres. The focal length is in centimetres. Multiply this by 10 to turn it into millimetres. Divide this number by the number of a stop, and the dividend is the f/ number.

## Tank Development.

I develop my roll films in a tank. If I adopt panchromatic films will it be safe to use the tank for the desensitiser first?

H. A. G. (Warwick.)

The purpose of a desensitiser is to reduce the sensitivity of the film so as to permit of its exposure to a certain amount of suitable light without detriment. With tank development this is not necessary, as the film need not be exposed to light at all until it is fixed. The use of a tank is the one method by which you can treat panchromatic film in exactly the same way as ordinary film.

## Numbering Negatives.

What is the best method of putting a number on film negatives for indexing purposes?

M. L. (Newcastle.)

Use a fine, smooth pen and fixed indian ink, and write the number in small figures on the clear margin.

## Pyro for Tanks.

Can you suggest a simple pyro formula for tank developer, and give an idea of development time?

E. L. M. (London.)

The following is a Kodak formula:

Sodium sulphite (anhy.)	..	40 grs.
Sodium carbonate (anhy.)	..	40 grs.
Pyro	..	15 grs.
Water to	..	20 oz.

This must be made up for immediate use. The time will vary, according to make of film and character of negative, but a "normal" time is 20 minutes at 65° Fahr. For other temperatures calculate the time so that the total of minutes and degrees is always 85. Thus at 60° give 25 minutes (60+25=85).

## Glycin.

I want to make up a glycin developer. Is this salt still obtainable? If so, is it expensive?

D. F. (Ayr.)

Any good photographic dealer can supply you with glycin. The price varies, but a one-ounce bottle should cost round about half-a-crown.

# AT LAST!

The "Prinsen" is the smallest and simplest electric exposure meter made, and gives INSTANT VISUAL READING of the correct exposure for plates and films of all H. & D. numbers and at all apertures.

Price only **£3:3:0**

Leather case 5/- extra.

## AN ELECTRIC EXPOSURE METER WHICH DOES FIT THE VEST POCKET

Guesswork is entirely eliminated by the "Prinsen," which is both remarkably accurate and extremely simple to use. No tables are required, and the reading is direct for ANY stop and ANY exposure. If YOU wish to be sure of giving absolutely correct exposures in all lights and at all times you can be certain of doing so with

## The PRINSEN Electric EXPOSURE METER

Send for leaflet giving full details to the Sole Distributors for Great Britain :

**SANDS HUNTER & CO., LTD.,** 37, BEDFORD ST., STRAND, LONDON, W.C.2

## WINTER CONDITIONS

CALL FOR  
WIDE APERTURES

Wide apertures demand very high quality lenses.

### ZEISS LENSES

possess that extra quality that means so much, particularly to the miniature camera user, who is faced with the extra handicap of a necessarily high degree of enlargement. Zeiss lenses give crisp enlargements from the smallest negatives.

Invest in a ZEISS TESSAR

Full particulars in list P51 from: **CARL ZEISS (London) LTD.**  
37-41, Mortimer Street - London, W.1

### SUBSCRIPTIONS:

The *Amateur Photographer and Cinematographer* is published by Iliffe & Sons Ltd., of Dorset House, Stamford Street, London, S.E.1, every Wednesday morning in town and country, and may be obtained of all newsagents and bookstalls, or delivered by post at the following rates:

BRITISH ISLES AND CANADA.	s.	d.	OTHER COUNTRIES ABROAD.	s.	d.

# The Amateur's Emporium

## PRIVATE SALE AND EXCHANGE

For Amateurs only.

All advertisements inserted in these columns must be strictly prepaid, and reach the Offices, Dorset House, Stamford Street, S.E.1, not later than first post Friday for the following week's issue. Advertisements are inserted, as far as possible, in the order received, and those received too late for one issue, or crowded out, are published in the first following in which there is space. The Proprietors retain the right to refuse or withdraw advertisements at their discretion.

"The Amateur Photographer" can be obtained abroad from the following: **UNITED STATES:** The International News Co., New York. **FRANCE:** W. H. Smith and Son, 249, Rue Rivoli, Paris; Hachette et Cie, Rue Beaumur, Paris. **BELGIUM:** W. H. Smith & Son, 71-75, Boulevard Adolphe Max, Brussels. **AUSTRALIA:** Gordon & Gotch, Ltd., Melbourne (Victoria), Sydney (N.S.W.), Brisbane (Queensland), Adelaide (S.A.), Perth (W.A.), and Launceston (Tasmania). **NEW ZEALAND:** Gordon & Gotch, Ltd., Wellington. **Auckland,** Christchurch and Dunedin. **INDIA:** A. H. Wheeler and Co., Bombay, Allahabad and Calcutta. **CANADA:** Imperial News Co., Toronto, Winnipeg and Vancouver; Benjamin News Co., Montreal; Gordon & Gotch, Ltd., Toronto. **SOUTH AFRICA:** Central News Agency, Ltd.

Prepaid Private Advertisement Rate:

Twelve words or less, 1/- 1d. for every additional word. Each paragraph is charged separately.

Cheques and Postal Orders sent in payment for deposits or advertisements should be made payable to **ILIFFE AND SONS LTD., and crossed**

Notes being untraceable if lost in transit should not be sent as remittances.

## DEPOSIT SYSTEM.

For full particulars see previous issues.

## BOX NO. ADVERTISERS.

Letters addressed to box numbers are simply forwarded by us to the advertisers. We do not deal with the correspondence in any other way, nor accept any responsibility in connection with the advertisements.

## CAMERAS AND LENSES

## WARNING

We have received many complaints from our readers in regard to the business methods of Mr. R. L. Green, trading as R. L. Green's Photographic Exchange, of 218, Fore Street, Edmonton, London, N.18, or (possibly with different initials) as Cine Photo Supplies, 4, Holborn Place, High Holborn, W.C.1.

For some considerable time we have refused to insert his advertisements in "The Amateur Photographer and Cinematographer," and from the complaints we have received it would appear that his practice is to communicate with private advertisers having goods for sale, offering to take such goods in exchange for others, or to purchase for cash. Readers are advised to ignore all such offers from this quarter.

## CAMERAS AND LENSES

MOVIES with Colour.

THE Illustrachrome Multi-Colour Wheel will enable you to give your movies in a fully professional manner by introducing delightful chromatic and atmospheric effects. You can present your feature opening with a blaze of glorious multi-tinting, and then throughout the subject create a sense of reality that you have never before enjoyed. Then at the end pass from sunset to twilight in restful conclusion, you will be more than satisfied with the knowledge that you have given a perfectly artistic presentation by employing this aid to better movies. To fit all projectors, including the B-200, 6/-.

BARGAINS for Personal Callers or Customers who promptly send remittance to avoid disappointment.

Any film supplied by us in this service will be taken in exchange for a further 2/6 at any time when another film is required. When sending film give a selection of numbers to indicate your preference. All the old favourites and new novelties available. S. for S., SB. for SB.

EXTRACT from testimonial, original of which can be seen. Cumberland—"I thank you for sending me the 2 films ordered. I am delighted. Kindly send another. Please find cheque enclosed in payment of same."

Is your Cine Stage equipped with true professional lighting effects? If not, consult "Illustra," who supply all atmospheric lighting effects, coloured bulbs and footlights from stock, or to specification.

ALWAYS available—Big Selection of Projectors, Bulbs, Motors, Screens, Lanterns, Resistances, Dimmers, Spotlights, etc.

DEFINITELY not a shop; a warehouse packed with cine equipment. No catalogue is available of bargains far too numerous to list, therefore your inspection invited.

ILLUSTRA ENTERPRISES, 159, Wardour St., London, W.1, Oxford St. end, facing Film House. Ger. 6889. 1-5-9, one address only, 1-5-9. [1477]

## EXHIBITION PRINTS

DEVELOPED WITH

## "FESAGOL N"

Which automatically compensates for errors in exposure,

**WILL BE PERFECT**

With "FESAGOL N" exposure is almost unimportant

"The Amateur Photographer" says:—

"Remarkable latitude in exposure and development without staining for prolonged development or poor colour for shortened development."

"Only difference between full and barely adequate exposures was the length of time in development. The final results in each case being excellent."

YOU WILL GET PERFECT RESULTS  
AND NO WASTED PRINTS

To make 90 oz. **3/2**

Obtainable from all Dealers

PLEASE NOTE NEW ADDRESS

Send for descriptive leaflets to:

**L. A. LEIGH & CO.**

179, WEST END LANE, N.W.6

Phone: Maida Vale 7902.

## SHORTER DAYS MEAN LONGER EXPOSURES

No risk of camera shake if you use

**"CAMSTEDI"** (Patent)

With a "CAMSTEDI" support exposures up to 1 sec. can be made in the hand.

Adaptable for use at "eye" or "waist" level.

IDEAL FOR "MINIATURE" WORKERS

Ask your dealer to show you one or send direct to maker.

Price 5/6. Postage 3d. Black or Tan.

**H. E. MANISTRE**

113, Queen's Road, Bayswater, London, W.2  
BAY 3636.

## ENLARGEMENTS

"Barker's" Concentrated Light Cabinet.

A simple and practical way to perfect enlargements. Giving great detail without grain. Attaches to any camera, folding or box type, 1/4-plate. **15/-**

Particulars from:

**CHARLES TAYLOR**, 35, Breadalbane St., GLASGOW, C.3.

## SHOOT OF HAMPSTEAD

Has everything for Winter photography in stock. Leica enlargements a speciality.

Expert advice and assistance. *Leica* All Photographic Supplies. Exchanges. Specialist.

## "LARGODREM"

### ELECTRIC EXPOSURE METER FOR ENLARGING

The perfect exposure meter for use with any make of vertical enlarger. The "Largodrem" is simply laid on the base-board, the light switched on, when the correct exposure for any make of bromide paper can be read on the scale.

Price 30/-

Important—please state voltage when ordering.

### "LARGODREM TESTER"

Bromide papers are usually supplied by the makers without any indication of their speed. By means of the "Largodrem Tester," used in conjunction with the "Largodrem," the rating of any bromide paper when using the "Largodrem" can be quickly ascertained. Price 3/6.

## The Simple Art of Home Photography

This charming indoor picture is a striking example of what the amateur can do with Selo Hypersensitive Roll Film and the new Selo Lighting Set. The diagram shows the arrangement of subject, Selo Lighting Set and camera which achieved this happy result.

There is a host of fascinating studies to be made within the four walls of your own home. Get a Selo Lighting Set and a spool of Selo Hypersensitive Panchromatic Roll Film to-day.

### SELO LIGHTING SET

Designed for use with Selo Hypersensitive Panchromatic Roll Film. The set comprises: extra large spun aluminium reflector, mounted on solid stand with provision for controlling the throw of the light, Photoflood lamp, 3 yards of flex and universal connecting plug. Price **17/6**

## SPECIALIZATION

### MINIATURE APPARATUS.

We are the only firm in Great Britain specializing exclusively in miniature apparatus such as the Leica and Contax. Every miniature camera of distinction together with a full range of accessories is to be seen at our showrooms. Where miniature cameras are concerned, we give the highest part-exchange allowances and pay the best cash prices in the trade. Any type of modern high-class apparatus taken in part exchange.

### PROCESSING.

A new approach to the problem of processing is essential if flawless negatives and perfect enlargements are to be produced from miniature negatives. Appreciating this, we have equipped ourselves exclusively to deal with the miniature negative. We pride ourselves that the results fully justify our policy.

**STOP PRESS!**—Just arrived, the new Weston Leica Meter, reduced in size, but three times increased sensibility, £5 19 0

**New Enlargers for LEICA, CONTAX, ROLLEIFLEX, SUPER IKONTA and EXAKTA owners.**

We are pleased to announce that we are now able to supply a well-made and inexpensive enlarger to take the now popular 6×6 cm., 4.5×6 cm. and 4×6.5 cm. negatives.

The new enlarger, the Vertex, is of the semi-condenser type. The lamphouse is unusually large and well cooled, and the negative carrier of simple and convenient construction. It is fitted with an f/4.5 anastigmat and has an orange swing filter. The maximum enlargement obtainable from a 6×6 cm. negative, without swinging the head round and projecting off the baseboard, is 15×15 in., or from a 4.5×6 cm. negative approximately 15×12 in. Price £8 8s.

The other two Vertex models are for Leica and Contax owners. They are supplied without lenses and take the Leica and Contax lenses respectively. Maximum magnification is approximately 7 times linear. Price £6 6s. each.

## SOHO ELECTRIC ENLARGER (T)

(Boardman's Patent).

Prices: No. 16, with "Soho" Anastigmat F/6.3 lens £7 17 6  
No. 17, with "Soho" Anastigmat F/4.5 lens £11 2 6

List and full information from:

**SOHO LIMITED**  
3 Soho Square  
London, W.1

This Condenserless Enlarger has been greatly improved by the provision of a new lamp-house, capable of taking 100-watt gas-filled lamp. A further increase of light is obtained by use of mirrors, very considerably reducing the amount of exposure required.

Adaptable for use either on a bench, or in a vertical position, it is a general purpose enlarger, suited alike to the requirements of the Professional Photographer, D. and P. worker, or amateur.

### PATHÉSCOPE 200-B

The finest 9.5-mm. projector available. 200-watt lamp. Picture up to 10 ft. wide easily obtainable. Complete with lamp, plug, flex, adapter and 300 ft. empty super reel ..

Vol. LXXX. No. 2455.

THE pictorial possibilities of the cinematograph gave a great field of discussion for the Pictorial and the Cinematograph Groups of the Royal Photographic Society at a recent combined meeting. Mr. J. F. Marshall, who led off, put the case very succinctly when he drew attention to the fundamental differences between static and dynamic photography. The still picture must have some permanence in its appeal. Once made or acquired, we have to live with it, or hide it away, for ever. Far otherwise with the cinematograph film, giving us images that poise before the eye only for a moment, a living, transient thing, one of its chief characteristics being its stimulation of the senses by varying and contrasting images. What might appear to be an unfortunate spacing or ill-chosen accent in a single frame might be quite acceptable when considered in its correct position in a complete sequence of movement. Therefore the worth of a film must not be assessed solely by the consideration of single frames, for that is to put the film to a use for which it was never designed and to convert it into an indifferent lantern-slide. By depriving a film of its main characteristic, which is movement, we are treating it as a musical critic would treat a symphony if he considered only an isolated bar.

### Is the "Close-up" a Picture?

Is there improvement pictorially in the output of the film studios? Mr. J. F. Marshall in the recent debate expressed the opinion that there was. He mentioned a number of examples, one of them a scene from the "Private Life of Henry VIII," in which the courtiers visiting Anne of Cleves move across the

## TOPICS of the Week

CANTERBURY CATHEDRAL BY  
ARTIFICIAL LIGHT

*The North Choir Aisle, looking West.*

*An article on this subject appears on  
another page.*

picture behind sunflowers—the whole shot a low-angle one, having the effect of a living frieze. The difficulty with the theatrical film is that the requirements of the story and also the exigencies of sound reproduction generally crowd out pictorial considerations as ordinarily understood. To assess the pictorialism of the cinematograph it would be better to pay regard to documentary productions or the work of some of the more enlightened amateurs. Mr. Marshall maintained that attributes peculiar to the cinematograph, such as the "close-up" and the angle shot, ill-used as these methods had been from time to time, had a definite and important use in pictorial cinematography. They could lend emphasis in a well-ordered presentation and give it pictorial significance. He warned critics against judging the cinema from a still picture in a frame. The very life of the cinematograph picture seemed to draw the spectator within its bounds—he was in the film, so to speak—and he accepted the "close-up" and the "angle shot," just as in real life he would, when necessary, take up something for closer inspection or peer into this corner and that.

### Cathedral Interiors at Night.

Such is the progress of modern lighting equipment, that "night is being turned into day"—not only in some of our great shopping and theatre centres, and along stretches of arterial roads, but in our cathedrals, churches and other public buildings. Floodlighting enhances the beauty of practically all buildings to which it is applied. Details of a façade can be lit up in such a way as to attract special attention of the passer-by. In interiors, the

effect of spot-lighting, hidden lighting and general flood-lighting seems even more remarkable. For one thing, the ceiling can be lit up in such a way that decorative features become visible which in daytime are shrouded in darkness; this particularly applies to vaulted roofing in our cathedrals and churches. The bugbear of economy, alas! still prevents the using of the large amount of electric current necessary to illuminate the vast spaces of many of our cathedrals; but some amazingly good lighting effects have been secured at Canterbury cathedral by the judicious use of powerful electric lights. Many years ago, before modern electric lighting came into vogue, a verger in a northern cathedral used to say to the visitor, "Come again, when the snow is on the ground, then you will see what the roof is like!" Truly, the snow caused a transformation; the reflected light from the ground outside shone up through the windows, lighting up the high vaulted roof of the nave, so that every detail in the stone-work could clearly be

seen. It is a similar effect to this which is accomplished by the internal lighting of Canterbury cathedral. The lights are so placed that the roof becomes perfectly lit, not only in the nave, but in the aisles and chapels. The shadows cast from some of the pillars give a curious if not unpictorial effect, and there are many unexplored possibilities open to the keen amateur photographer. An article on the subject will be found on another page in this issue.

### Magnesium Ribbon, Age 72 Years.

Now that so many photographers can take portraits at night by the aid of artificial light, thanks mainly to improved sensitive materials and electric lighting, a correspondent recalls the fact that one day this week is the seventy-second anniversary of the introduction of magnesium ribbon or wire. In 1863 the manufacture of magnesium was commenced in Manchester, and during the last week of November of that year, at a Manchester scientific society, Professor H. E. Roscoe

exhibited the light emitted by burning a piece of magnesium ribbon or wire 1 mm. in diameter and 10 ft. long. Mr. A. Brothers, who was at the meeting, secured a piece of the wire and a few days later reported some experiments he had made with it, chief of which was the copying of an engraving by the light given out by the wire. At that time the price of the wire was half-a-crown per foot (to-day it is from 1s. 9d. to 2s. per ounce), and only small quantities were obtainable. Early in 1864, three photographers working together managed to get a good negative in the Blue John Mine in Derbyshire by the light from magnesium, and in May of the same year it was used to make a portrait of Dr. Faraday at the Royal Institution in London. Since these historical initial efforts, magnesium in the form of wire or powder has been widely used by photographers. But we move quickly, and now magnesium lighting is becoming displaced in favour of flood-lamps and flash-bulbs used in conjunction with modern high-speed plates and films.

## READERS' PROBLEMS

Selected queries on topics of general interest to readers will be fully dealt with on this page week by week. Other replies appear as usual on the last page.

### Retouching Difficulty.

*I can now manage very well that part of negative retouching which is done with medium and pencil, but I cannot succeed in modifying small dense patches by means of a knife. I understand that there is a special pencil for this; if so, what is it called, and where can I obtain one?*

R. A. S. (Aberdeen.)

It is a good thing that you have mastered the pencil retouching of a negative, as this work prevents dark spots and patches on the print which are always difficult to deal with. You no doubt realise that it is easier to darken parts of a print than to lighten them. This suggests that in some cases it is advisable to leave alone some parts of a negative that are too dense, and to lower the tone of such parts on the print itself.

We understand your difficulty with the retouching knife, but would advise you to continue to practise with it on waste negatives. Much depends on the sharpness of the knife, but still more on the "knack" of using it. Once this is acquired it is surprising what can be done.

The pencil of which you have heard is probably what is called an abrasive pencil. Some years ago an accessory was introduced for the same purpose, consisting of a small, compact bundle of threads of fine-spun glass in a mount. But the ordinary abrasive pencils can be prepared without much trouble.

Get a small round pencil, or some similar cylindrical object, and wrap tightly round it several thicknesses of thin, tough paper, pasting it down as you go. Let this dry, and then slip it off so that you have a cylindrical case. Lead or tin foil will do instead.

Melt a little paraffin wax, and incorporate with it some very finely sifted pumice powder, or rouge powder. The former works more quickly. Pour the mixture into the paper case,

in which it cools and hardens. The "pencil" is sharpened suitably and used for rubbing away the silver from the over-dense patches. This is slow and patient work, but effective. A rub with a rag and a trace of petrol will remove any residual wax.

### Pyro-Soda for Tank.

*I am old-fashioned enough to prefer pyro-soda for my plate negatives, but am now often using a tank, and for this other developers are generally suggested. Can you recommend a pyro-soda solution suitable for either dish or tank work?*

L. S. (Harwich.)

We do not know of anything better than the following, which has been popular for many years, and is in every way satisfactory.

Mix together 460 grs. of anhydrous sodium sulphite and 115 grs. of potassium metabisulphite, and dissolve in 8 oz. of warm water. Bring this to the boil for one minute, add 115 grs. of pyro and bring up the total volume to 16 oz. Call this Solution A.

Now dissolve 600 grs. of anhydrous sodium carbonate in 16 oz. of water, and call this B.

For tank use, take 3 parts A, 3 parts B, and 34 parts water. At 65° Fahr. about 20 minutes will give negatives suitable for enlarging on normal bromide paper, but, as we have frequently pointed out, the time of development varies considerably according to the kind of sensitive material used. Greater or less time also affects the degree of contrast in all cases; the longer the development the greater the contrast.

For dish development a more concentrated solution may be used; that is, the amount of added water is decreased, and this will naturally shorten the time of development.

# FLOOD Photography

A topical subject that offers opportunities for new landscape effects for both amateur photographers and cinematographers.

IN practically every low-lying district of the country at the present time the excessive rainfall has flooded the land. Roads are impassable, rivers have overflowed their banks, and fields have become lakes. The result of this, apart from the considerable inconvenience to residents, has been to alter the landscape to a remarkable degree and create even greater difference in its familiar appearance than would be caused by a heavy fall of snow.

The flooded districts now present a novel and unusual aspect, and, in the neighbourhood of rivers, large masses of moving water add to the appeal of the scene for picture-making.

Here is an attractive and topical subject that should not be missed, but should be turned to pictorial account by every keen user of a camera or a ciné camera. There is plenty of movement for the latter where the rivers have overflowed, while, for the former, broad expanses

considered. If the work is being done deliberately, waders may be necessary, but, in any case, the feet should be well shod, and, preferably, the familiar rubber Wellingtons should be used.

In many of the flooded districts in the neighbourhood of rivers, boats and punts are available. These can be freely navigated in various

view of the large reflecting surfaces presented by the flood water itself.

The point of view is a matter that must be dealt with according to each particular subject as it is approached. The daily and weekly papers have already published innumerable photographs of the flooded districts, some of which have been very striking.

*The River and the Road.*

*The Flood Photographer at work.*

of water with wonderful reflections and isolated trees, etc., offer opportunities for novel compositions.

To deal with this subject satisfactorily, apart from the keenness of the individual, suitable and adequate equipment in the matter of footwear and clothing should be

any camera or ciné camera with which the worker is already familiar will serve the purpose. The appropriate exposures for the time of year and time of day should be ascertained by meter or tables, but it should be remembered that they can be considerably reduced in

directions over flooded fields, etc., and from them some remarkably good viewpoints may be obtained.

So far as apparatus is concerned

The news reels at the cinemas have also shown many good pictures of the floods. These should afford useful hints to the amateur when dealing with this subject.

A strong foreground object in the shape of bushes or trees is desirable, and fast panchromatic films or plates are very desirable, particularly in the afternoons when there is a possibility of poor light. Anyhow, it is a subject that is worth attempting, and one which may not occur to such an extent again, which is probably the wish of many of those whose houses have been marooned.

# Cathedrals by Lamplight

*A new sort of Winter Architectural Photography.*

By E. W. TATTERSALL.

PHOTOGRAPHING cathedral interiors at night is a phase of camera work that has only become possible very recently. This is due partly to the fact that the cathedral authorities in many cases have greatly improved and augmented the lighting, even to the extent of flood-lighting; and partly to the great speeding up of sensitive materials which enable comparatively short exposures to be given to these impressive subjects.

Canterbury cathedral is particularly favoured in the matter of lighting effects, and on that particular night on which the accompanying photographs were taken, the best opportunities for picture-making occurred in the aisles, the chapels and the crypt. The great area of the nave presented a more difficult proposition, because of a little haze which had gathered in the roof.

The exposures for these subjects, lit by the electric lighting of the cathedral, ranged round about  $2\frac{1}{2}$  minutes at  $f/11$  to  $f/16$ , using Kodak S.S. Panchromatic flat cut films.

It would have been possible to improve the rendering of the nave by using a light filter over the lens, to counteract the haze, and increasing the exposure accordingly; but, as it was, the lights had been specially turned on for the

*Canterbury. The North Choir Aisle, looking East.*

*Canterbury. The Choir, with a glimpse of the Nave roof.*

convenience of the photographer, and it was natural that under the circumstances the sooner the job could be finished the better for the cathedral authorities! It speaks still more for the excellence of the sensitive materials that no light filter was used, and yet the haze did not show obtrusively, and also the light stone-work was well rendered. Had plates been used, of course, they would have had to be backed.

When developing, the chief thing to guard against is obtaining a hard and chalky negative, therefore a dilute developer is desirable, and development should not be carried too far. In the present case the results would probably have been still better if "portrait" or "soft-gradation" pans. had been used.

Now that so many grades of paper are on the market, it is fairly easy to find one which exactly suits this type of negative, for the particular purpose in view, whether for reproduction or for exhibition. To be on the safe side, however, a thin negative is always desirable for enlarging.

As to the choice of lens for this class of work, a great deal depends upon its composition. It has been found that the simpler the construction of the lens, the better for night photography. Any lens with a number of internal reflecting surfaces will tend to increase whatever halation there may be in the subject.

Cathedrals by lamplight offer as yet an untried field for many photographers, and kindred subjects such as dark country churches, old-fashioned houses, the interiors of which might have proved an insuperable problem to photograph by "the light that comes in through the windows," now that artificial lighting has so much improved, offer fewer difficulties. Stained-glass windows, which by strong daylight often cause trouble, by dusk, plus the electric light of the building, give a beautifully harmonised picture.

# See a **CONTAX** before buying your new **Miniature Camera**

The Zeiss Ikon Contax has been designed with one end in view—the production of the perfect miniature negative. This is attained by the wonderful definition given by the Zeiss lenses—the exactness of the focussing with the long-base patent rotating wedge distance meter, and the fineness of the grain of the modern film, in which connection Zeiss Ikon Pernox, now supplied with both orthochromatic and panchromatic emulsions, is an outstanding example.

## Advantages only the **CONTAX** can offer

Visit our  
**EXHIBITION  
OF CONTAX  
PHOTOGRAPHY**

at

**The NEW  
GALLERY  
EDINBURGH**

Dec. 2nd to 14th

- All-metal focal-plane shutter, speeded from  $\frac{1}{2}$  to a real 1/1,000th second.
- Shutter speeds can be altered both before and after setting.
- Long-base rotating wedge distance meter, ensuring a focussing accuracy and robustness not equalled by the distance meter on any other miniature camera.
- Choice of 12 Zeiss Contax lenses, focal lengths from  $1\frac{1}{8}$ " to 20", apertures from f/1.5 to f/8. All lenses are interchangeable by means of the Contax bayonet catch system, the change-over only taking a few seconds, and nine are coupled with the distance meter.
- The back of the Contax is detachable for cleaning—an important point, because dust and particles of film emulsion will collect inside a camera and must be removed, otherwise negatives will suffer from pinholes.

*The above advantages and many other points particular to the **CONTAX** are fully explained in our books, the "Connoisseur and the Contax" and the "Ten Contax Lenses," both of which will be sent free on application.*

*The Contax can be purchased from most high-class dealers on the instalment system. Name and address of nearest dealer on request.*

# REDUCTION *or* INTENSIFICATION

## *with One Solution*

By D. E. LUMB STREET.

MANY amateurs shy at the idea of after-treatment of their negatives and prints. They object to the necessity for keeping a lot of different stock solutions. Nevertheless, incorrect exposure is still one of the commonest faults in photography, and to make the best of many negatives some after-treatment is required. Over-development is quite common, too.

Most of the usual reducers and intensifiers suffer from some disadvantage, such as lack of control, uncertainty, doubtful permanency, or a highly poisonous nature. The following process is simple to operate, is free from the above objections, and while chiefly of use for reduction, can also be applied for intensification.

A bleacher, of the kind used for sulphide toning, is required, and your favourite formula may be used. The following standard formula will answer well:

Potassium ferricyanide	100 grs.
Potassium bromide	100 grs.
Water to	10 oz.

Immerse the negative in this, and

make sure that no airbells remain. It will bleach to a pale yellow in a few minutes. Remove it and wash in running water for five minutes, or five changes of water.

To reduce, the bleached negative is placed in any usual developer which, however, can with advantage be used at quarter normal strength. This gives one a greater control over the action. Watch the redevelopment carefully; the image will darken first at the surface and gradually develop through to the back. When it is dense enough (when observed by transmitted light) wash for a few seconds, then fix in a plain fixing bath for ten minutes. This last will remove the remaining yellowness, and all that remains is to wash and dry in the usual way, when the image will be found to be reduced evenly all over to whatever degree decided on.

If the negative is under-exposed and over-developed, with harsh contrasts, it can be evened up by the same method by stopping the redevelopment at an earlier stage, i.e., as soon as the lighter parts and half-tones of

the image are darkened. The heavier high-lights which have not yet been acted on can then be fixed out, leaving a negative of comparatively even quality.

To intensify, the bleached negative is redeveloped in any of the usual developers. Pyro gives a substantial increase in printing value, due to the formation of a "stain image," while amidol yields a warm tone of useful printing quality. Development should be carried to finality, i.e., until no sign of yellowness can be seen from the back. The plate is then washed well and dried. No fixing is necessary.

While primarily of value for negatives, this method can be used successfully for intensifying bromide prints. If, for example, an enlargement has been spoiled by incorrect exposure and the image is too flat and grey, it can frequently be saved in this way; by using an amidol developer well restrained with bromide, warm tones somewhat resembling those of chloro-bromide can be obtained.

All the operations are carried out in daylight or other actinic light.

## "The A.P." Monthly Competitions

### AWARDS FOR OCTOBER.

AN unusually large number of prints of high technical and pictorial merit was the feature of the October competitions. This particularly applied to the Advanced Workers' and the Intermediate Sections. The number of entries in all three sections continue to increase every month, and the competition becomes keener in consequence. The prize-winning prints were well up to exhibition standard again. The awards are as follows:

#### ADVANCED WORKERS' SECTION.

First Prize.—"Sunlight on the Mantelpiece," by C. D. Notley, 34, York Mansions, London, S.W.11.

Second Prize.—"Fi Sug-as-Safafr, Baghdad," by S/L. R. Jope-Slade, Air Ministry, Adastral House, Kingsway, London, W.C.2.

Third Prize.—"New Year's Greetings," by Sorab J. Kharegat, 12a, Cusrow Bang, Colaba Causeway, Bombay.

Mounting Prize.—"Sunshine and Smoke," by George Hilleard, 8, Undershaw Road, Bromley, Kent.

Certificates of Merit.—"Autumn Sunshine," by Mrs. N. Ashmore, 50, Union Street, Burton-on-Trent; "Storm Brewing," by Hubert M. Bond, Bylands,

White Rose Lane, Woking, Surrey; "Chiaroscuro," G. Tschernochvostoff, Idrottsgatan 22 A 10, Helsingfors, Finland.

The prints not receiving awards have been grouped, those in the first group receiving Honourable Mention. The others have been marked Class 1, Class 2 and Class 3, respectively.

Those awarded Honourable Mention are as follows: Mrs. N. Ashmore (Burton-on-Trent); H. Baden Oates (Newquay); Hubert M. Bond (Woking); W. F. A. Chambers (Geneva); J. H. Clark (Camberwell, S.E.); M. Desai (Bombay); W. Ecclestone (Shrewsbury); E. A. Fordham (West Wickham); Arthur G. Gardner (Bristol); Naval Adarji Goghavala (Bombay); A. T. Grub (Acton, W.); R. C. L. Herdson (Herne Hill, S.E.); William Jackson (Hull); (2) S/L. R. Jope-Slade (London, W.C.); E. T. Koch (Ceylon); C. D. Notley (London, S.W.); Mrs. K. M. Parsons (Reading); A. C. R. Redgrave (Margate); A. Hugh Reynolds (London, N.); Geo. A. Slight (London, S.E.); A. James Soye (Belfast); Major D. J. Stevens (Bordon, Hants); Denis Whitlock (Shortlands, Kent).

#### INTERMEDIATE SECTION.

First Prize.—"Breezing Along," by Thomas Hamil-

ton, 183, Culrain Street, Shettleston, Glasgow, E.2.

Second Prize.—"Portrait," by R. Mottershead, 75, Grosvenor Street, Leek, Staffs.

Certificates of Merit.—"Devon Farm," by A. R. Beattall, 18, Ellesmere Avenue, Alfreton, Derbyshire; "Vacation Cruise," by Fred. J. Egan, 15, Linden Street, Toronto, Ont., Canada; "Alga, Glafosfjorden, Sweden," by G. P. Hilbery, 13, Gray's Inn Square, London, W.C.1; "Lunch Hour," by Mrs. Marjorie Livingston, 18, Collingham Gardens, London, S.W.5.

#### BEGINNERS' SECTION.

First Prize.—"Pictures in the Fire," by Mrs. B. Watton, 39, Raglan Court, Wembley Park, Middlesex.

Second Prize.—"A Flying Dutchman," by A. C. Boxall, 70, Thurlstone Road, West Norwood, London, S.E.27.

Certificates of Merit.—"Auld Reekie," by C. P. Abbott, 111, Dormers Wells Lane, Southall, Middx; "Feeding Time," by Bernard G. Ball, 32, Abbotwood Road, Streatham, London, S.W.16; "Portrait of Elizabeth," by L. H. Openshaw, 22, Parklands Drive, Broughton, Preston; "Outward Bound," by G. M. Peake, Motcombe, Palace Road, Hampton Court.

**The Camera Club.**—The Annual Exhibition of members' work is now open at 17, John Street, Adelphi, and remains open until December 14th. As on previous occasions this exhibition discloses a remarkably high standard of pictorial work, but this is not surprising when it is seen that the show includes pictures by prominent exhibitors such as Alex. Keighley, Walter Clutterbuck, John St. Aubyn, Leo A. Leigh, Ella Mollo, E. Heimann, John H. Ahern, Rosalind Maingot, J. B. Woodroffe, M. Neven du Mont, T. B. Blow, and many others. Over

one hundred exhibits are on view. The Sir William Crawford Plate has been awarded to Ella Mollo for an attractive nude study, entitled "Light and Shade." Readers of "The A.P." should endeavour to visit this exhibition; admission is free. The Camera Club is open daily, Sundays included. Besides all photographic facilities, it serves light meals and teas, has a full licence, billiards room, and all the amenities of a social club. Full particulars will be sent on application to the Secretary, The Camera Club, 17, John Street, Adelphi, W.C.2.

# ILLUSTRATE

A PRACTICAL NOTE FOR WINTER WORK.

*Appliqué design.*

**W**INTER is the time when fireside hobbies come into their own, and it is also a time when the camera can be used to great advantage for obtaining useful records of work well and truly done, or at least attempted.

A good photograph of a piece of delicate needlework will reveal a great deal more than the most careful drawings. You can see at a glance the kind of stitch used, the way the design has been worked out, the kind of material and threads used, and the true intricacy of the design itself. Of course, a lot is missed owing to the monochrome rendering, but by the use of appropriate filters and panchromatic material, lovely and delicate gradations of tone may be obtained.

I think every person who practises a hobby should keep an album showing examples of work done. These will help in the future development of ideas and act as inspiration; this I consider very important. We are prone to moods, and when we are down in the dumps it is better than a tonic just to glance through the album and see what we did last winter.

I find my photographic records give both my friends and me great pleasure, and, another thing, they have proved of considerable service when teaching handicrafts. Drawings are all very well in their way, but they lack that

reality and authenticity inseparable from a first-class photograph. When teaching at Women's Institutes I have found camera studies able to make clear an obscure point otherwise exceedingly difficult to explain.

It is, I think, a great pity that more use is not made of photography in the classroom—it has infinite possibilities; but all work of an educational value must be needle-sharp and crystal clear.

Most of my record work is done with a quarter-plate stand camera, using S. G. pan. plates and a

*Example of Gesso work (Book End).*

*Drawn thread work.*

Gamma filter. I like to use daylight as this gives less contrasty results, and certainly more artistic pictures. Even in the winter there are times when sunshine floods even the city room, and then it is time to get busy. Careful focusing, a small stop and full exposure give the best results. Attention must also be paid to the arrangement of the object to be photographed.

This should be displayed to the best advantage and evenly lighted. Objects in relief should have a lighting slightly to one side to accentuate the shadows or texture.

When photographing examples of embroidery the aim of the photographer should be to get tone and feeling into the finished print, and I find it necessary in many cases to increase the printing value and brilliance by immersing the negative in a weak hypoferricyanide reducer for a minute or so.

# your Hobby

By IVY E. NORMAN.

This increases the contrast of the negative tones, but should not be carried too far as this will cause excessive contrast.

Sometimes treatment with persulphate reducer is desirable to reduce the high-lights. This has the opposite effect to the previous hypo-ferricyanide reducer, and should be used with a negative that is too contrasty or over-developed. A good

guide to the arrangement of lighting used for the different objects can be gained by studying the catalogues issued by the makers of these many hobbies. I strive always to obtain the most realistic results. I want linen to look like linen and cane to look like cane, not pieces of twisted putty, and to do this is often very difficult. Still, trouble is nothing if the results are first class, and a feeling of very real satisfaction is experienced.

The illustrations are, naturally, samples of the kind of work in which I am personally interested; but my suggestions are of very wide application. Nor do they apply only to things made, but to things collected—butterflies, coins, botanical specimens and what not. Even schoolboys may apply the idea, say, to the handicraft models they construct.

## A Handy Camera Stand

*A simply constructed stand suitable for Still Life, Portraiture and Copying, etc.*

**A**MATEURS who have attempted indoor photography where a camera stand of some kind is a necessity, such as in home portraiture, flower studies, still life, table-top work, copying, and so forth, are bound sooner or later to come up against the limitations of the ordinary tripod, particularly if engaged upon work where the viewpoint has to be adjusted to a nicety.

By J. T. MARRIOTT.

It consists of a solid pillar, supporting a tilting top, which is made to slide in a hollow pillar, which latter is supported upon a triangular platform. From the sides of the hollow pillar to the corners of the platform spring three struts, which give rigidity and act as feet for the whole to rest upon.

With regard to the details of construction, it is advisable to commence with the central pillar. This is a piece of  $2 \times 2$  in.,  $2\frac{1}{2}$  ft. long, and carefully squared off at the ends. Then proceed to fashion the tilting top. The platform is  $4 \times 6$  in., and a glance at the illustrations will show the details. For heavy cameras a "piano hinge" might be substituted for the two small ones illustrated. The guide is cut from three-ply with a fretsaw; the curved slot must be very carefully plotted. The whole is kept in the desired position by means of a fly-nut and washer, running on a screw-headed bolt let into the under (fixed) portion of the top.

Next proceed to build the hollow pillar round the central pillar. The back is made first, with a width of 2 in., plus twice the thickness of the wood in use. Then make the two sides, 2 in., plus one thickness of the wood in use. The sides are now screwed or nailed

*The completed Stand (closed).*

(long thin nails) to the back by their edges, so that the central pillar can slide easily without undue looseness. Finally, the front is made 2 in. wide. This has not to be fixed, but allowed to float, so that it can be pressed at will upon the central pillar, which is gripped between the front and the back and held in any desired position until the pressure is released.

How to apply such pressure constituted a problem in itself. After several essays, a solution was found in the lever and wedge system shown in the print above. Seated behind the stand it is the simplest matter to raise or lower the camera with the left hand whilst varying the pressure with the right. The action is smooth and rapid, all necessary pressure can be applied, and with the measurement given an increase in height of 2 ft. attained without loss of rigidity. A good stout screw should be used as pivot for the lever, and the wedge should be tried in several positions before making the final adjustment. The floating side has a piece of wood screwed laterally across its base to prevent sag at full extension.

The platform (of 5-ply) is now nailed to the bottom of hollow pillar, and the struts added. This form of base can be used as a receptacle for weights should additional rigidity be required.

For ease and adaptability in use this stand will take some beating, and so far has met every demand made upon it.

*Tilting Top, showing guide with fly-nut, bolt, and washer.*

If, in such circumstances, it is found, after the camera has been set up and carefully levelled, that the viewpoint must be moved an inch or so in any direction, the whole process has to be repeated.

Lateral movement is not so troublesome, but any alteration in height, involving the adjustment of three sliding legs, wastes both time and patience.

It was with the object of overcoming the above-mentioned objections that the camera stand illustrated was designed and constructed. It is made entirely of  $\frac{1}{4}$ -in. deal boarding, save the central pillar, the base, and the guide to the tilting top, and any one at all handy with tools should be able to copy it or adapt it to their particular needs.

*Tilting Top up for vertical work. Note recess for head of tripod screw when top is closed.*

# NEWS AND REVIEWS

ITEMS OF GENERAL INTEREST FROM ALL QUARTERS.

**Zeiss Ikon Ltd.** have asked us to announce that they will be holding an exhibition of Contax enlargements at the New Gallery, 12, Shandwick Place, Edinburgh, from December 2nd to December 14th. The exhibition will remain open each day, except Sunday, from 10 a.m. to 5.30 p.m., and will contain a representative selection of all kinds of subjects taken with the Contax. Most of the exhibits will be 24 x 16 in. enlargements, but three specially large specimens measuring up to 6 ft. will also be shown.

We have had the opportunity of inspecting the Barker Concentrated Light Cabinet. The purpose of this is to enable enlarging to be done by an ordinary  $\frac{1}{4}$ -plate or smaller camera. The back of the camera is encircled by an elastic-banded fabric to keep it in contact with the cabinet. The light from a 60-c.p. lamp, suitably placed in the interior, is reflected by parabolic reflector through the negative to the lens of the camera and thence to the bromide paper on the easel. The absence of a condenser enables enlargements to be made without emphasising grain or blemishes on the negative. The price is 15s., the sole agent being C. Taylor, 35, Breadalbane Street, Glasgow, C.3.

The Whitehall Ciné Society started its winter session with congratulations to John Chear, for winning a plaque for the second year in succession in the R.P.S. Exhibition of Cinematography. It is gratifying to note that in each case the film had already been included in the Exhibition of Members' Films, which has been run for the last three years by the Whitehall Society. Other members' films which have been accepted in

R.P.S. Exhibitions are "Mainly Boats," by C. R. Stubbs, and "Metropolitan Medley," by J. F. Marshall. Mr. Marshall is now Secretary of the Ciné Group of the R.P.S. Two other members whose contributions to ciné journalism often appear are R. H. Alder and Harry Walden, who is now chairman. The Society is a society of cinematographers, and it is felt that the slogan adopted in 1932 of "Make Better Films" is being justified. This year two changes are being made in the programme. First there will be more practical work and some experimental shooting, so far as the meeting-room permits. Secondly, there will be projection at every meeting, even if the evening is mainly for demonstration. Civil servants who are interested should write to O. Kordik, India Office, S.W.1.

We have already referred to the Nadir tape, made by the Ozalid Co., Ltd., of 1, Central Buildings, Westminster, London, S.W.1. This cellulose self-adhesive tape offers great advantages for a number of photographic purposes. It is transparent, and extraordinarily adhesive. It is now supplied in 6d. rolls, and provides an inexpensive and handy form of adhesive that will appeal to every reader of this paper. It should be asked for at stationers, or application made to the above address.

A reader of "The A.P." is desirous of compiling a list of agents, shops, etc., throughout the country who are willing to hire out 16-mm. ciné projectors. The reader in question is Mr. L. C. Arundel, 128, The Chase, Wallington, Surrey, and he has a number of technical and educational films which are loaned

free of charge to working men's institutes and similar organisations where such films are considered of interest. In many cases no projector is available, and Mr. Arundel wishes to obtain the above list for circulation to the various districts to which films are sent. All communication should be made to him at the address given.

The Hon. Business Secretary of the Yorkshire Photographic Union—Mr. W. E. Gundill, informs us of a change of address. After the present date it will be Sawley House, Springfield, Dewsbury.

A third monthly photographic ramble has been arranged by the Southern Railway for the Guildford District on Sunday, December 1st. The train leaves Waterloo at 9.40 a.m. The leader of the party will be Mr. A. E. Daly.

The London, Midland and Scottish (London) Photographic Society will hold their Eleventh Annual Exhibition of Pictorial Photography at Euston Station, London, March 16th to 21st, 1936, and it will comprise two classes: Class 1, open to members of the society only; Class 2, open to exhibitors in Great Britain and Northern Ireland. Entry forms may be obtained from Clarence Pursell, Hon. Exhibition Secretary, Chief Accountant's Office, L.M.S. Rly. Co., Euston Station, London, N.W.1.

The Windlesham Camera Club has just received notice that H.R.H. The Duke of Connaught, K.G., has consented to become patron of the club. To have Royal interest shows the work done is of value, and the members, with their unique aim of church photography for posterity, will now be encouraged to greater efforts. The club is only six months of age, but over sixty strong, and membership increases every week. The Hon. Secretary is Mr. J. C. Hayward, Hallgrove, Bagshot, Surrey. All applications for information concerning the club should be made to him.

## Exhibitions and Competitions

CURRENT AND FUTURE.

Notices of forthcoming exhibitions and competitions will be included here every week if particulars are sent by the responsible organisers.

The Amateur Photographer Monthly Competitions for Beginners, Intermediate and Advanced Workers.—Entries, November 30. Rules in this issue.

Seventh Western International Photographic Salon.—November 23-30. Organising Secretary, W. H. Hill-Muchamore, 24, Church Road, Redfield, Bristol.

Third (Second International) Wilmington Salon of Photography.—Open, January 6-26, 1936. Last day for entries, December 15, 1935. Particulars and entry forms from the Salon Committee, Delaware Camera Club, P.O. Box 818, Wilmington, Delaware, U.S.A.

Leicester P.S. International Exhibition.—Entries, January 24, 1936; open, February 24-March 7, 1936. Exhibition Secretary, H. Foscutt, 19, Doncaster Road, Leicester.

Preston Scientific Society.—Eleventh Annual Open Photographic Exhibition. Monday, February 3 to Saturday, February 15, 1936. Entries close Friday, January 19, 1936. Particulars and entry forms from the Exhibition Secretary, F. Wells, 65, Powis Road, Ashton, Preston, Lancs.

Scottish National Salon.—February 8-29, 1936. Entries close, January 11. Particulars and entry forms from the Hon. Salon Secretary, Norman G. Brown, 36, North Lindsay Street, Dundee.

The 40th Annual Exhibition of the South London P.S.—Open, February 15-March 14, 1936. Entries close, January 21. Further details and entry forms from Hon. Exhibition Secretary, H. S. Adams, 40, Stockwell Park Road, London, S.W.9.

Edinburgh Photographic Society.—74th Annual Open Exhibition. Open, February 22-March 7, 1936. Entries close, February 3, 1936. Particulars and entry forms from the Hon. Exhibition Secretary, Geo. J. Kennedy, 16, Royal Terrace, Edinburgh.

Birmingham Photographic Society.—45th Annual Exhibition. Open, February 29-March 14, 1936. Entries close, February 8, 1936. Particulars and entry forms from the Hon. Secretary, Eric H. Bellamy, Waterloo House, 20, Waterloo Street, Birmingham, 2.

Ilford Photographic Society.—Annual Photographic Exhibition. From Monday, March 2 to Saturday, March 7, 1936. Closing date for entries, Saturday, February 1, 1936. Particulars and entry forms from E. G. Roughton, 63, Havering Road, Romford, Essex.

City of London and Cripplegate Photographic Society.—Thirty-first Annual Photographic Exhibition from March 16-21, 1936. Entries close, February 10, 1936. Particulars and entry forms from the Hon. Exhibition Secretary, A. C. Mundy, 11, Monkham Lane, Woodford Green, Essex.

London, Midland and Scottish (London) Photographic Society.—Eleventh Annual Exhibition of Pictorial Photography at Euston Station, London. Open, March 16-21, 1936. Particulars and entry forms from the Hon. Exhibition Secretary, Clarence Pursell, Chief Accountant's Office, L.M.S. Railway Co., Euston Station, London, N.W.1.

Ville Salon International D'Art Photographique de Bruxelles, 1936.—Open from March 21-April 5, 1936.

# how I make my EXHIBITION PICTURES

Methods and Ideals of well-known Pictorial Workers.

No. CCCIX.

Mr. DONALD  
McLEISH.

From information communicated to our Special Representative.

"IN the year 1935 the efficiency of apparatus and material give such freedom to the pictorial photographer that their mention in detail would seem almost superfluous; nearly as futile indeed as an essay on the tools of the artist or craftsman.

"In the present connection it may be sufficient to say that all my pictures have been taken with a box-form camera of my own construction, made many years ago, with the lens in a focussing jacket, and carrying 5x4 plates in dark slides. It has accompanied me in the traverse of some twenty-one

countries; in the war in seaplanes; on the Alps to heights of 14,000 feet, and into the depths of crevasses. It has tumbled several hundreds of feet down the Matterhorn, and been dropped into the Sea of Galilee. I am convinced that no other form of camera could have stood the racket.

"A considerable experience of scenic photography has taught me that the factors most likely to make an instant and pleasing appeal are correct lighting, and proper balance of opposing lines and masses. Much can be done by choice of viewpoint, but I have often found it necessary to remove

offending obstacles in foregrounds, cut away branches and the like. I aim at the inclusion of figures when possible; they add enormously to the interest of a subject. But judgment and a considerable knowledge of human nature are needed if they are to appear a natural and unconscious part of the picture. Many workers fail lamentably at this. A certain awkwardness of approach, and perhaps the national shyness gets in their way, and baffle the best efforts of their native models. Such people are apt to use the term 'posed photographs' in a disparaging sense, which seems to be merely an attempt to cover their own deficiency in this respect; to make a virtue of necessity, in fact.

"I make a practice of using thickly-coated plates, and develop negatives to extra density in order to have a reserve in hand for subsequent reduction, local or complete. The negative after its final washing is frequently only the raw material for the finished picture. In spite of all care before exposure, there is seldom a negative that cannot be improved by hand-work. High-lights need strengthening with the pencil, offending detail removed with the knife, while broader masses of unwanted density are reduced by chemical or frictional means. This hand-work, which converts an ordinary photograph into something more artistic, is the basis of my more pictorial results, and since it is difficult to apply these methods with flexible film I use plates exclusively.

"The best photograph is a dull affair compared with the 'living bright reality.' Therefore it is an article of faith with me to combine with pure high-light and intense shadow all the intermediate tones that photography can give. But there are still a number of workers who seem to view nature through ground-glass spectacles. There is endless interest in the photography of children and animals with their varied moods and expressions, the racing yacht storming along with lee rail under, the embodiment of power and grace, the rugged Alpine peak streaming with glaciers, and gleaming ice séracs which exhibit the beauty of shadow within shadow that only photography can render. All such work is difficult, but the results are of permanent value."

(A further example of Mr. Donald McLeish's work is reproduced on one of the centre Art pages.)

A ROMAN CONTRAST.

Donald McLeish.

# Pictorial Analysis

Every week the picture reproduced on the art page opposite will be analysed in detail for the benefit of readers of the paper who are seeking to improve their pictorial work.

"THE DANCER," by Marcus Adams.

THE child studies of Marcus Adams are famous. On their account he is known throughout the world, and there is no doubt but that, by reason of his strongly individualistic touch, his work is supreme in its sphere. In this instance, however, he departs from the realm of portraiture, and presents a figure study, which, nevertheless, is characterised by the same masterly handling and distinctive treatment for which his portraits are renowned.

Its quality is remarkable. There is a thorough harmony between subject and treatment, and between the tonal scheme and arrangement, that is particularly striking, and, although it cannot wholly be conveyed in the reproduction, something of the impression that is created may be gathered. It is not from any one element, but from the whole, that this impression arises, but much of it comes from the happy relationship of tone with tone, their soft and subtle transitions in some of the passages, and the judicious employment of vigorous contrasts in others.

The figure, for example, is rendered by rich and powerful darks in opposition to brilliant and forceful notes of light, but, at the same time, contains a measure of half-tone. The darks seem to show that colourful quality and depth, and the lights that luminous sparkle, that are associated with chloro-bromide papers under perfect technical treatment, while these suggestions are heightened by the choice of a cream-tinted base. The warm brown-black of the shadows accords with the creamy smoothness of the lights, and, in the background, which is mainly in the lighter shades of half-tone, the same feeling of luminosity persists. The limitation in the scale in which the setting is rendered makes it an admirable foil for the figure, for it has sufficient depth to relieve the lights, and yet is not heavy enough to

minimise the intensity of the darks, both being perfectly displayed.

But, although its general tone is light, the setting is fully modulated. It is characterised by alternating tones of varying value, and these occur in such a way as to cause a series of directional impulses to arise. Along the top, they extend downwards from the right towards the figure with a

the other arm, and is supported by the opposition of the head and other leg which create another diagonal crossing the first. In the same way that lines of a vertical tendency suggest dignity and height, and horizontals peace and quietude, diagonals invite a feeling of unrest or movement. The figure, on account of its disposition on two diagonals in opposition, conveys, in itself, a fine feeling of motion. This, having regard to the implications of the title, is essential to the theme; but, while the suggestion arising from the pose of the figure alone is adequate to convey the idea, the directional impulses imparted by the diagonals of the setting emphasise and reiterate it, so that the feeling of motion arising from the two elements in conjunction is exceedingly forceful and convincing.

In the sketch, an endeavour has been made to reduce the form to the simplest elements in order to make these directional impulses clear.

The expedient is one that has not infrequently been adopted in the works of the masters, to create an impression of an irresistible onset of troops in battle subjects, lances or spears being shown as verticals on that side of the picture representing the rear, with a gradually increasing inclination in the line of movement till—in the portion of the subject depicting the forefront—they are almost level. Used in this way, the effect is cumulative, and a vigorous impression of motion is created.

It is scarcely feasible to deal with subjects of this kind by means of photography, unless, perhaps, the resources of a cinema studio are available; but there are, nevertheless, many occasions when it is necessary to incorporate a feeling of movement, and the ability to make use of directional impulses to stress that feeling may mean the achievement of a pictorial success in place of failure.

"MENTOR."

slight diagonal inclination. Towards the centre, the bands of shadow assume a contrary or opposing angle, and, while the tendency at the base is towards the horizontal, the foreground also displays lines with a sloping inclination.

The pose in which the figure is shown suggests action. This is emphasised by the strong diagonal formed by the rear leg, trunk, and upraised arm; is again stressed by the slope of

## SOME CRITICAL COMMENTS on the Beginners' prints reproduced on the opposite page

IT is the same with portraits of animals as portraits of men or women: they need just as much care; the pose and expression have to be caught at just the right moment; and an equal amount of forethought has to be given to their arrangement and the preparation of the setting.

### Scale and Distance.

Camera-consciousness, perhaps, may not be encountered, although some animals do betray a suspicion of anything with which they are unfamiliar, and this may be regarded as an analogous drawback; but, taking it all round, the portraiture of animals is just as difficult as that of men, women or children.

No. 1 of the prints on the opposite page—"My Cat," by Albert S. Todd—shows a well-placed subject; the expression and pose do not offer any occasion for criticism; and the background, with its uniform and subdued scale of tones, is admirably chosen. The print, too, is good from the technical standpoint. The focussing is correct, the eyes and features being sharply defined, and, while there is plenty of vigour, the print has a soft quality that speaks well for its workmanship.

But it is not quite right. There is a fault, but it is one that does not leap to the eye. It is only after studying the print that it becomes apparent, and it lies in the scale in which the head is shown in comparison with the body. The head is too big, and this arises from an illusion of distorted perspective caused by too near a viewpoint.

### Illusory Proportions.

The perspective, however, is *not* wrong, and the print would not seem incorrect if it were feasible to view it at a distance equivalent to the focal length of the lens. The field of view embraced by the lens is much wider than that normally included by the eye, and when the lens is brought too near the subject the perspective is extended so far that it is greatly in excess of ordinary vision.

The effect is seen in an apparent exaggeration of the size of near objects, and it is on this account that the head of the cat in this study seems

too big. The way to avoid it is to increase the distance between subject and camera, and, if a head is wanted on a large scale, it can be obtained by subsequent enlargement.

Alternatively, the same end can be achieved directly on to the negative by the use of a lens of long focus. Which of the two methods is chosen is immaterial, but, to secure a perspective that really seems natural, it is essential that the distance between camera and subject is adequate. Twelve feet is about the minimum, and to adopt a lesser distance is to invite the disability in some degree or other.

"Caught Napping" (2), by B. Walder, is better in this respect, for the viewing distance, at a rough guess, would be about ten feet. A critical scrutiny, however, does reveal a hint of exaggeration in the size of the head, though it is scarcely noticeable in comparison with the other.

### Uniformity of Setting.

The splash of sunlight in the foreground lends a touch of pictorial feeling, and is decidedly useful on this account, but it could be wished, perhaps, that its effect were exerted to a greater extent on the cat. It would give it a greater emphasis and isolate it better from its surroundings.

The tone of the setting is just about right, and its uniformity tends to relieve the figure effectively, but the latter does need a bit more of the sunshine, and, if the subject is tried again, it might well be arranged.

It is questionable, too, if the introduction of the tea-cups was wise, for the foreground seems quite sufficiently diversified without them, and they are not altogether congruous. A similar suggestion of incongruity arises from the inclusion of the chair in No. 5, "Queenie," by George Hilleard. A dog is an amenable creature, no doubt, and can be made to do a great many things that are foreign to its nature.

It does not, in the ordinary way, choose a chair to sit on, and, besides the feeling of incongruity, the introduction, in this instance, creates an impression of hasty and ill-considered improvisation.

### Consideration and Forethought.

The idea that is conveyed is that the dog suggested itself as a possible subject; there was a hasty glance round, perhaps, to choose a spot where the light was good enough; the first chair to come to hand was placed in position; the dog dumped on the chair without any regard for its dignity or natural inclinations, and photographed then and there.

If it should be necessary for the subject and setting to be arranged, it should be done, not in this haphazard sort of way, but with the same forethought and care that would be devoted to a portrait of a human being. Any expedient employed for providing a background or for inducing any desired pose should be carefully disguised, and not allowed to become evident as a contrivance in the finished picture. If it does, it defeats its object and only succeeds in creating, as it does in this instance, an impression of amateurishness and unworkmanlike inefficiency.

That it is possible to avoid it is conclusively shown by Nos. 1 and 2, to which a certain amount of preparation must have been devoted; but, if this should happen to be impracticable, there is an alternative in that the subject may be taken in a natural, as distinct from a domestic, environment.

### Natural Environment.

No. 7, "Gillie," by Robert Welburn, provides an instance. The background is natural; it offers a sufficient contrast of tone to isolate the figure; its modulations are unassertive, and it suits the subject. The viewpoint, perhaps, is rather too near, but, apart from this, the work is as good in its way as that of Nos. 1 and 2.

With Nos. 3, 4 and 6, "Koala Bear," by J. P. Carney; "The Judge," by H. Sterne, and "Dr. Pelican," by K. Jones, the subjects are farther removed from the domestic type, and there is therefore less opportunity of exercising the same measure of control either by pre-arrangement or choice of viewpoint. Having this in mind, and viewing them not too critically, they serve their purpose quite well.

"MENTOR."

# With the Beginners

## NOTES AND NOTIONS FOR THE LESS ADVANCED WORKER

Every week an article will appear under this heading dealing with a topic of interest to the novice in photography.

### POINTS ABOUT SIMPLE ENLARGERS.

MY experience teaches me that there are two questions that are put by beginners (and others) more frequently than any other question. They are: (a) What is the best camera? and (b) How can I make an enlarger? There are no satisfactory answers. The most earnest efforts to deal with them only lead to accusations

of an enlarger. It could be done, provided the construction were reasonably simple, and that the instructions were accompanied by the necessary diagrams. But whatever type I selected it is certain that it would appeal to only a few; to the many it would be of no interest, and they would want instructions and drawings of something very different. That is why we seldom find, nowadays, such articles on making an enlarger as used once to be fairly common. Then, there were few varieties of apparatus; now, their name is legion.

The only useful thing to be done, in my opinion, is to get some notion of the general ideas and facts in connection with enlargers and enlarging, so that the knowledge will enable us to proceed on proper lines in rigging up a simple piece of apparatus, or in modifying and adapting something to suit our purpose.

Suppose we start with the illumination of the negative. I know that a great many experimenters find themselves in trouble when they make a box-form lamphouse to take, say, an electric lamp, and use their camera at one end to hold the negative and project the image. It seems all right. If the lamp will light up a room it will surely light up the back of a little negative.

Further, the arrangement appears to be much the same as that in some commercial enlargers which work quite well. But many of these only work because behind the light is a scientifically constructed reflector, and there is almost certain to be, in addition, some means of diffusing the light.

Let us look at the illustrations. From a strong quarter-plate negative I made a whole-plate print, using a condenser with a 40-watt filament lamp with frosted bulb.

Fig. 1.

of ignorance, sarcasm and rudeness. Question (b) in the form given was actually asked recently over the phone!

My own first enlargements were made by daylight, with a home-made box of primitive construction, and a lens which (I still remember) cost four shillings. It was effective within its very narrow limits, but appallingly inconvenient. Even the best forms of daylight enlarging have their drawbacks, and it is a great advantage to be able to work with some constant artificial light. It is not surprising that daylight enlarging is almost obsolete.

When it comes to artificial-light enlargers there is enormous variety in construction and working. Some of the apparatus is specially designed for a particular purpose, such as enlarging from miniature negatives only, and perhaps only to a comparatively small degree of magnification. Automatic focussing has become a common feature, and the vertical instead of the horizontal working is very popular.

There are many photographers who cannot afford the sort of apparatus that would just suit their needs; there are others who cannot find anything to meet all their requirements; and there are a considerable number who would like to economise by using their own camera, or perhaps only the lens, as part of the enlarging apparatus.

Now I am not going to attempt to describe the making

Fig. 2.

Then I just removed the condenser, and made an exposure without it. I got nothing but a small, irregular patch in the middle. Then I moved the lamp much nearer to the negative, and got the result shown in Fig. 1. This can hardly be called even illumination.

My next step was to change the lamp for one of 100 watts, and with the lens at  $f/4.5$  gave an exposure of 30 seconds. The result is shown in Fig. 2. It will be seen that the larger and stronger lamp has made a difference, but the exposure is far too great for the middle, and quite inadequate for the edges.

Finally, I replaced the condenser, adjusted the 100-watt lamp to suit, stopped down the lens to  $f/11$ , gave an exposure of 4 seconds, and Fig. 3 is the result.

Yet we know that a condenser can often be dispensed with quite easily.

If we put a small lamp close behind the middle of a large negative we shall get something like Fig. 1, or worse. As we move the light farther from the negative the illuminated patch gets larger, but the light is weaker everywhere, and

Fig. 3.

beginning; and even a diffusing screen, with the addition of the best possible reflecting device, may not secure equal central and marginal illumination. There are ways of securing further improvement, but they generally involve some corresponding drawback.

Personally, I have come to the conclusion that the simplest solution of the problem is a condenser, and I think I can easily demolish the only objection raised against its use.

## HOW TO COLOUR PRINTS

**A**LTHOUGH the production of colour transparencies is now so simple that any one can produce them, the production of prints by colour photography is still beyond the powers of the average amateur.

The pleasure of seeing his prints in colour can, however, be gratified even by the beginner, for only the slightest artistic skill is required to colour bromide and other prints. Providing the proper methods and materials are used, it is simple to colour prints with pastels or oil or water pigments.

Whatever method of colouring is adopted, it is important that the colours used should be those specially prepared for photographic work. Pastels should only be used to colour matt or rough prints, whereas matt or preferably glossy prints should be used when oil or water colour is being used.

When pastels are to be used, the print to be coloured should be made in the normal way, well washed, and then thoroughly dried. When it is quite dry, the print is thoroughly dusted with pumice flour. This pumice flour is then well rubbed into the print with a piece of cotton-wool. Finally a clean piece of wool is used to rub off as much pumice as possible. The print is then ready for colouring.

Any large areas of uniform colour are first dealt with. A little pumice flour is mixed with powdered pastel of the shade required. This is uniformly rubbed into the area being treated, with a small wad of cotton-wool. Great care should be taken to keep to the outlines

indicated by the print. The tint on the boundary of any area is best rubbed in by using a small piece of wool wound round the end of a match-stick.

When all large areas have been coloured as above, any fine detail is put in with pencils. When all colouring is finished, the colours are fixed by steaming the print.

When oil colour is used, the surface of the dry print is rubbed over with a very small quantity of light drying oil (obtained from any artists' colour-man). When the print is thoroughly dry, it is ready for colouring. As before, the large areas are treated first. The oil colour (only transparent colours should be used—obtainable in tubes), thinned with turpentine, is rubbed into a uniform coat with a wad of wool, the match-stick device being used where necessary. Fine detail is then put in, using a small sable brush. When all colouring is finished the print should be left untouched for at least twenty-four hours. This is the easiest of all print-colouring methods.

When water colours are to be used the surface of the print should be rubbed with a piece of wool which has been wrung out in the following solution:

Purified oxgall	..	30 grs.
Pure methylated spirit	..	2 oz.
Water (preferably distilled)	..	10 oz.

When dry the print is ready for use. Large areas are treated first with cotton-wool and match-stick. Detail is then put in with a sable brush. When dry the print is finished. If the special Japanese and aniline colours—sold for

the purpose—are used, full instructions are given with each outfit.

Now as to obtaining certain effects. If pastels are used, one colour may be mixed with another, but if two or more colours are to be used to obtain a certain effect, when water or oil colours are being used, it is best to apply a coat of one colour, let it dry, and then put a coat of the other colour on top of it. This obviates the risk of one colour destroying another.

Flesh tints are obtained by using very pale brown mixed with (pastels), or followed by, very pale red. For skies, cobalt is the best general tint, but for stormy skies, indigo and a little Payne's grey. Distance in landscapes should be rendered by purple and grey-blue, and the sea by using blue mixed with or followed by very dilute green. Near foliage is coloured with green, modified if necessary with yellow or brown.

If a dilute colour is required when using pastels, more pumice flour is mixed with the pastel.

The fact that a uniform thin coat of colour should always be applied may seem surprising. The reason, of course, is that the monochrome modelling of the print shows through and produces different gradations of tone from the uniform wash of colour applied.

In conclusion it may be said that, using the correct methods, any one can succeed after a little practice on some old waste prints. And as a last word—the golden rule of colouring is, always take great care to be guided by the outlines of the subject.

A. P. E. KENT.

# Picture Points

for Beginners, No. XXV,  
by RICARDO

## Another Point on Modelling

THE characteristic of photography in being able to give the impression of solidity, sometimes called plasticity, depends not only on the camera but on the viewpoint it takes and on the arrangement of the lighting.

If we take a cube, the ideal object for this purpose, and study it from four different angles, as in the first sketch, we can get a rough idea of how solidity can be obtained, leaving aside the lighting for the moment.

No. 1 shows a direct front view of the cube, which, although it is quite true, does not give any impression of solidity. No. 2 is better, but is too symmetrical. No. 3 offers more variety, but if we vary the areas of the top and right faces we get No. 4, where we have a realistic rendering of the cube in a satisfying position.

In the lower sketch we put the idea into practice. The top half shows a row of books which is similar to No. 1 and the lower half which is similar to No. 4, which again is certainly more realistic.

## When the Modelling is Lost in the Shadow

THE time-old advice of exposing for the shadows and letting the high-lights take care of themselves is just as true to-day as ever it was, and under certain conditions it is very sound and practical.

But it must not be regarded as an infallible remedy for badly placed lighting. For subjects away from home where we have no control over the available lighting it is the only way to register the details in the shadows, but for such subjects as indoor portraiture and still life, where we can place the lights to reveal the shadow details, there is no excuse for results similar to that in the left-hand sketch.

This is not a question of under-exposure as might be at first supposed, but a matter of insufficient lighting on the shadow side, causing the contours and modelling to be lost in the darker side.

This subject may have looked quite attractive to the eye, but it must be remembered that the lens sees everything at once, and cannot adjust itself to open up to see details in the shadows and then close down in order to see the subtle tones in the high-light, just as the eye does without our knowing.

Therefore the best advice to the beginner is to aim for a general lighting over the whole subject with a light slightly stronger on one side, if the complete contours and modelling are desired, as seen in the right-hand sketch.

## Unnatural Perspective in Still Life

MOST beginners know what to expect if they were to point an ordinary fixed-back type of camera up at a building in order to include the top. A falling backwards effect would be seen in the print

and appear most unnatural and disturbing. If the same building were photographed from a near-by roof with the camera pointed down to include the base, the opposite effect will be seen, making it look top-heavy and falling forwards instead.

In a similar manner, a still-life group will look top-heavy if a high viewpoint is taken, particularly if the subject includes anything with straight parallel sides, such as a book. An example of this will be seen in the top sketch, showing also how such a group appears to have unnatural perspective.

The remedy with such a camera is to place it much farther away from the subject and to lower it until the top planes of the subject are shown sufficiently for good modelling.

If, however, the camera possesses a swing back this can be used to correct the verticals. By keeping the back of the camera vertical all the vertical lines on the subject will appear upright. This is illustrated in the left-hand sketch, showing also how it prevents an unnatural effect of falling forwards.

for someone!*

# Rolleicord

Fitted with one-lever  
Compur Shutter  
speeded to 1/300th  
sec., T. and B., and  
f/3.8 Zeiss Triotar  
lens. With leather-  
covered body... **£12:15**

Here's the camera gift you can choose with confidence—a firmly established popular favourite which will give perfect pictures all the year round.

Rolleicord offers facilities which you don't get from an ordinary camera. It shows the picture full size and right way up on the ground-glass screen, and simply won't allow for getting "dud" pictures. It's the easiest camera any one could wish to operate, and it's very economical too. It takes 12 pictures on 8-exposure  $3\frac{1}{2} \times 2\frac{1}{2}$  roll film for 1/—, and is designed to take plate back and many Rolleiflex accessories which make it most versatile. Make it a Rolleicord gift and note the elation it conveys.

### PRIZES AND RULES.

#### (I) For Advanced Workers.

This class is open to all amateur photographers.

**FIRST PRIZE.**—One guinea in cash or "A.P." silver plaque (optional).

**SECOND PRIZE.**—Half a guinea in cash or "A.P." bronze plaque (optional).

**THIRD PRIZE.**—Five shillings in cash.

A special prize of five shillings in cash for the best mounted picture.

**CERTIFICATES OF MERIT.**

In addition to the general rules (see below), the following conditions apply:—

(1) All prints must be accompanied by a stamped addressed envelope or wrapper if they are to be returned. Prints receiving an award will be retained.

(2) Prints must be mounted, but not framed.

(3) Returnable prints in the Advanced Section will be sent back with a typed criticism, and classified according to merit.

(4) Prints may be of any size and by any process, and must be the competitor's own work throughout.

(5) The award of a prize or certificate in the Advanced Workers' Competition or any other competition or exhibition will not debar the competitor from entering again on future occasions and winning further prizes.

#### (II) For Intermediate Workers.

This class is to encourage those readers who have passed the "beginner" stage and may have won an award in the Beginners' Competition, but have not progressed sufficiently to enter in the Advanced Competition.

**FIRST PRIZE.**—Half a guinea in cash.

**SECOND PRIZE.**—Five shillings in cash.

**CERTIFICATES OF MERIT.**

In addition to the general rules (see below), the following conditions apply:—

(1) No print must be larger than 10x8 in., and can be by contact or enlargement by any process, and may be mounted.

(2) The whole of the work (exposure, development, printing, etc.) must be carried out by the competitor.

(3) Prints entered in the Intermediate Section will be criticised and returned if accompanied by stamped addressed envelope or wrapper. Prints receiving an award will be retained.

(4) The award of a prize or certificate in the Intermediate Competition debars the competitor from entering this competition again, but he is then eligible for the Advanced Workers' Section.

#### (III) For Beginners.

This class is open to those who have never won an award in any photographic competition or exhibition.

**FIRST PRIZE.**—Half a guinea in cash.

**SECOND PRIZE.**—Five shillings in cash.

**CERTIFICATES OF MERIT.**

In addition to the general rules (see below), the following conditions apply:—

(1) No print must be larger than 6x4 in. Contact prints or small enlargements up to this size are eligible, but must be unmounted.

(2) The exposure must have been made by the competitor, but developing and printing may be the work of others.

(3) No prints can be criticised or returned.

(4) The award of a prize or certificate in the Beginners' Competition debars the competitor from entering this section again.

#### General Rules.

(1) Any number of prints may be entered, but each print must have on the back the appropriate coupon

(see advertisement pages) the date of which must be within five weeks of the closing date of the competition. Overseas readers may use the most recent coupons to hand.

(2) Each print must have on the back the name and address of the competitor, and the title.

(3) All entries must be addressed to The Editor, *The Amateur Photographer*, Dorset House, Stamford Street, London, S.E.1, and the package must be marked on the outside "Beginners," "Intermediate," or "Advanced," as the case may be.

(4) No packages will be received on which there are postage charges to be paid.

(5) No communications on other matters should be enclosed with competition prints. No correspondence in connection with the competitions can be undertaken.

(6) The entry of a print will be regarded as a declaration that it is eligible under the rules, and that the competitor agrees thereto.

(7) No responsibility is taken for the safety of prints, and the Editor's decision on all points connected with the competitions is final.

(8) The publishers of *The Amateur Photographer* shall have the right to reproduce, without payment, any print entered, or to allow its reproduction in any other paper quoting from *The Amateur Photographer*.

(9) The closing date of each competition is the last weekday of the month. Prints arriving late will be entered for the next month's competition.

(10) The cash prizes awarded in these competitions are dispatched on the fifteenth of the month following the announcement of the awards.

The closing date for the November competition is Saturday, November 30th, and for the December competition, Tuesday, December 31st.

# The Week's Meetings

*Societies will have their meetings announced here if the syllabus is sent to us at the beginning of the session or from time to time.*

## Wednesday, November 27th.

Aston P.S. Inter-Club Competition at Handsworth P.S.  
Ayr A.P.S. Council Meeting.  
Bethnal Green C.C. Practical Work.  
Birkenhead P.A. "A Holiday in the Cotswolds and Mendips." G. J. de la Mare.  
Birmingham P.S. (Cin. Sec.). "A Night of Films and Music." A. G. Ratcliff.  
Borough Polytechnic P.S. "Two Thousand Years in Three Months." Kenneth Baker.  
Brighton and Hove C.C. "Miniature Cameras." R. M. Fanstone.  
Bristol P.S. "Off the Lizard in a Pilot Boat." James Randall.  
Carlisle and County A.P.S. Monthly Print and Slide Competition.  
Chorley P.S. "Gothic Architecture." Capt. J. C. O. Dickson.  
Coventry P.C. "Preparation of a Print for Exhibition." Fred Green.  
Croydon C.C. "With a Ciné-Kodak by Day and Night." F. G. Newmarch.  
Dennistoun A.P.A. Jumble Sale.  
G.E. Mechanics' I.P.S. "In and Out of Bruges." G. E. W. Herbert.  
Ilford P.S. "10,000 Miles with Two Babies." P. B. Dannatt.  
Kodak Works P.S. "People I Have Shot." James Jarché.  
Leek P.S. "Making the Exhibition Print." S. Bridgen.  
Northallerton and D.P. and C.S. "Dufaycolor Demonstration." Dr. W. C. Fothergill.  
Northamptonshire N.H.S.P.S. "The Enlarged Print." H. E. Cooper.  
Partick C.C. "Panchromatic Work." R. Stewart.  
Phoenix C.C. G.D.U. Slides and Colour Slides.  
S. Suburban and C.P.S. "The City of St. Swithin." C. H. Oakden.  
Worcestershire C.C. "Yugoslavia." B. Brotherton.

## Thursday, November 28th.

Accrington C.C. "Beautiful Bavaria." Miss N. Wells.  
Armley and Wortley P.S. "Colour Filters." S. Bridgen.  
Aston P.S. "Flashlight Photography." J. N. Cockin.  
Ayr P.S. Whist Drive.  
Bolton C.C. "From Riviera to the Isle of Beauty, Corsica." H. P. Mitchell.  
Bromley (Kent) C.C. "Finishing and Improving Bromide Prints." J. J. Butler.  
Bury P.S. Athenaeum Bazaar.  
Camberwell C.C. Monthly Competition.  
Cardiff C.C. A One-Man Show. H. T. Johns.  
Gateshead and D.C.C. Improvements of Negatives and Prints by Members.  
Greenock C.C. Still-Life Photography and Copying. (Members.)  
Hammersmith H.H.P.S. "Art and the Camera." W. L. Shand.  
Hull P.S. "Finishing Prints." L. Kirk.  
Isle of Wight C.C. "Passe Partout." Dr. H. F. Bassano.  
Keighley and D.P.A. Discussion on Prints.  
Letchworth C.C. Demonstration of Enlarging at the Studio. D. W. Brunt.  
Liverpool A.P.A. "Eastern Wirral—Birkenhead Priory to Stanlaw Abbey." T. J. Smith.  
N. Middlesex P.S. N.M.P.S. Outing Film.  
Oldham P.S. Monthly Meeting. Bi-Monthly Prints.  
Richmond C.C. "A Ramble in the Pyrenees." H. W. Fincham.  
St. Helens C.C. Exhibition in Windle Pilkington Hall.  
Singer C.C. Whist Drive.  
Sunderland P.A. Beginners' Enlarging Night.  
Tynemouth P.S. Figure Studies. (Practical Night, bring Cameras.)  
Wimbledon C.C. "Rhythm." R. J. Dobinson.

## Friday, November 29th.

Bethnal Green C.C. Portraiture. Demonstration and Practice in Studio.  
Brighton and Hove C.C. Committee Meeting.  
Colne C.C. L. and C.P.U. Prints.  
Desborough and D.P.S. Criticism of Artificial Light Competition Prints.  
Harrogate P.S. "Making the Exhibition Print." S. Bridgen.  
Huddersfield N.P. and A.S. Workroom Exhibition. Criticism of Prints. W. E. Gundry.  
John Ruskin C.C. Lantern Lecture. A. Brooker.  
King's Heath and D.P.S. Alliance 1935 Competition Slides.  
Leigh L.S.P.S. Open Meeting.  
Leytonstone and Wanstead C.C. "Slide-Making." E. G. Pine.  
Royal P.S. "Reeling out the News." F. Watts.  
St. Helens C.C. Exhibition.  
Southend-on-Sea and D.P.S. Indoor Portraiture. Members to bring Cameras.  
Wimbledon Ciné C. Members' Scenario Evening.

## Saturday, November 30th.

Edinburgh P.S. Members' Exhibition.  
Hackney P.S. Outing—Tate Gallery.  
Manchester A.P.S. "Italian Ways and Sicilian Days." J. Shaw.  
Peterborough P.S. Special Subjects Competition Closes.  
Phoenix C.C. Annual Exhibition. Closing Date.  
Royal P.S. "The Scope of Amateur Film Making." W. Farr.  
St. Helens C.C. Exhibition Closes.  
Stockport P.S. Exhibition Closes.

## Monday, December 2nd.

Bath P.S. "Old Turnpike Roads." Gerald J. Grey.  
Blackpool and Fylde P.S. Slide-Making—Contact and Projection.  
Bournemouth C.C. "Infra-red Photography." S. J. Beckett.  
Bournville C.C. M.C.P.F. Portfolio Prints and Slides.  
Bradford P.S. "Slide-Making." H. G. Grainger.  
Brighton and Hove C.C. "After-treatment of the Print." (Beginners).  
City of London and C.P.S. First Print Competition.  
Derby P.S. "Technical Evening for Beginners." H. R. Kershaw.  
Dewsbury P.S. Y.P.U. Trophy Pictorial Prints.  
Erdington and D.P.S. "Beautiful Britain." Slides by F. W. Birkbeck.  
Glasgow and W. of S.P.A. "Bromide Printing and Enlarging." W. Milroy.  
Halifax P.S. Committee Meeting.  
Kidderminster and D.P.S. "Misericordes." F. C. Morgan.

## Monday, December 2nd (contd.).

Kingston C.C. "Concerning Negatives."  
Kodak Works P.S. "Contact Printing: Papers and Developers." A. E. Amor.  
Leek P.S. "The Coasts of France and Italy" (Alliance).  
Lancaster P.S. "Romantic Italy." A. Keighley.  
Leeds C.C. "Making the Exhibition Print." S. Bridgen.  
L.C.C. Staff C.C. "History in Stones." Miss E. A. Miller.  
Luton and D.C.C. "Surrey Downs and Commons."  
Manchester A.P.S. "Norway." J. Armitage.  
Newcastle (Staffs) and D.C.C. "Photography with a Miniature Camera." R. W. A. Burgess.  
Oldham E.P.S. Slide-Tinting and Technical Competitions.  
St. Helens C.C. Pot-Pourri. J. Gorse; H. Reardon; J. Bolton.  
Shropshire C.C. Portfolio Criticisms No. 1.  
Southampton C.C. "Some Folk and Fjords of Norway." Kenneth Baker.  
S. London P.S. Competition: Criticism of Prints and Slides.  
Southport P.S. Exhibition.  
Walsall P.S. "Photography in all Seasons." F. Bradley.  
Walthamstow and D.P.S. Lecture. C. R. Williams.  
Wolverton P.S. L.M.S. Slides—Beautiful Malvern.

## Tuesday, December 3rd.

Ayr A.P.S. "Panchromatic Work." G. D. Stewart.  
Barnsley P.S. Criticism of Negatives and Contact Prints. S. Bridgen.  
Basingstoke C.C. Portfolio—Portraiture. Miss Dorothy Wilding.  
Beckenham P.S. "The Lecture, Lecturer and Lectured to." A. L. Fairbank.  
Bedford C.C. E.A.F. Folio and Slides.  
Birmingham P.S. "Exposure and Exposure Meters in Colour Photography." E. A. Bierman.  
Blackpool and Fylde P.S. "The Amateur Photographer" Prize Slides.  
Bridge of Allan and D.P.S. "Printing" (Beginners). A. E. Foster.  
Cambridge P.C. "The Problem of the Print." R. S. Beck.  
Dunfermline P.A. "Photography in Colour." W. Easton, Jun.  
Exeter C.C. "History of Malta." Dr. H. Elwin Harris.  
Grimsby P.S. "The Amateur Photographer" Prize Slides.  
Hackney P.S. "This Pictorialism." E. C. Butcher.  
Halifax P.S. Eighth Annual Exhibition.  
Harrow C.C. "The Dead Cities of Northern Africa." Major Charles Howard.  
John Ruskin C.C. Work Night.  
Kilburn and Willesden P.S. Competition Evening.  
Leamington and D.P.S. "Flashlight Photography, Past and Present." A. Jones.  
Leeds P.S. "With the Chief Scout in the Baltic." J. C. Scott.  
Leicester and Leics. P.S. "At the Feet of the Masters." W. K. Beddingfield.  
Manchester A.P.S. "Germany Revisited." J. Dudley Johnston.  
Monklands P.S. "Slide-Making." H. Peat.  
Morecambe and Heysham and D.P.S. Conversations in the Clubroom.—No. 2.  
Enlarging.  
Nelson C.C. "Railway Photography." R. Watson.  
Newcastle and Tyneside P.S. Members' Print Competition Criticism (Portrait).  
Norwich and D.P.S. "Development of Negatives." E. L. Helston and R. Gaze.  
Norwood C.C. "Press Button B." G. H. Dannatt.  
Nottingham and Notts P.S. Display of Members' Ciné Films.  
Peterborough P.S. "Finishing the Print." One-Man Show by F. Sturton.  
Ponteract P.S. Exhibition of Prints from the R.P.S.  
Portsmouth C. and Ciné C. "Cross Channel in a Small Sailing Boat." H. R. Verry.  
Royal P.S. "Photography with a Motive in Record, Art and Science." A. C. Banfield.  
Rugby and D.P.S. Competition Evening—Architecture.  
St. Bride P.S. Beginners.  
Sheffield P.S. "Holidays with a Camera." F. A. Jordan.  
Small Heath P.S. Alliance Competition—Slides.  
South Shields P.S. "Oil Reinforcement." W. Ferrier T. Pinkney.  
Stafford P.S. Competition (Prints and Slides). Criticism.  
Streatham and D.P.S. "Enlarging." G. H. Smith.  
Swindon and N. Wilts. F. and C.C. "Around Wiltshire."  
Warrington P.S. R.P.S. Special Subject Portfolio, 1929.  
Winchester P.S. Members' Print and Slide Evening.  
York P.S. "Wild Life Throughout the Year." W. Farnsworth.

## Wednesday, December 4th.

Bayswater and Paddington P.S. "Modern Aids to Indoor Portraiture." S. Schofield.  
Bethnal Green C.C. "Knapsack Tour in the Lake District." Slides by G. Herbert.  
Birkenhead P.A. "The Requirements of a Picture." H. Jones.  
Birmingham P.S. (Ciné). "Making Documentary Films." Matthew Nathan.  
Borough Polytechnic P.S. "Home-made Gadgets." C. Howard.  
Bradford P.S. "Development of Negatives." (Pictorial Group.) W. Womersley.  
Brighton and Hove C.C. "The Evolution of Photography." R. H. Lawton.  
Carlisle and County A.P.S. "Dark-room Dodges." G. C. Weston.  
Cheltenham A.P.S. "Developing Roll Films, Film Packs and Plates." T. B. S. Cox.  
Chorley P.S. Three Yorkshire Gems.  
Civil Service Ciné S. 16-mm. "Revolt of the Fishermen." M. Burke and A. Haune.  
Coventry P.C. Criticism Evening.  
Croydon C.C. "A Year with Nature." J. E. Roberts.  
Dennistoun A.P.A. G.D.U. Portfolio of Prints.  
Edinburgh P.S. "Leica goes to Italy." Mrs. Ruth M. Raeburn.  
G.E. Mechanics' I.P.S. Exposure Meters.  
Ilford P.S. Visit to South Essex C.C.  
Kodak Works P.S. "Miniature Camera versus Stand Camera." P. T. Sampson.  
Manchester A.P.S. "The Beauty of Britain." J. D. Berwick.  
Northallerton and D.P. and C.S. "After-treatment of Negatives." R. P. Haw.  
Partick C.C. Whist Drive.  
Rotherham P.S. "Making the Exhibition Print." S. Bridgen.  
S. Suburban and Catford P.S. "Way Down Dorset." G. E. W. Herbert.  
Worcestershire C.C. "Photographic Adventures in Philosophy." J. W. Lawton.

# Readers' Questions ANSWERED

GENERAL.—All communications for the Editor should be addressed: "The Editor, *The Amateur Photographer and Cinematographer*, Dorset House, Stamford Street, London, S.E.1," and in every case, without exception, must give the name and address of the writer.

CONTRIBUTIONS.—The Editor is glad to consider original, up-to-date manuscripts on photographic subjects. All contributions must be typewritten, or in very legible handwriting on one side of the paper only. Letters or communications arising out of matters already appearing in the paper are not paid for. The Editor disclaims legal responsibility for the safety of matter submitted to him, but he will endeavour to return rejected manuscripts, etc., when a stamped addressed envelope is enclosed. MSS. or prints that are not actually accompanied by a stamped wrapper or envelope can in no case be returned. Reproduction fees for prints are only paid by arrangement beforehand. The sending of a print, without any condition stated, will be taken as permission to reproduce it without fee.

ENQUIRIES AND CRITICISM.—Advice, Criticism and Information are freely given, but the following conditions should be read carefully before applying, as any communication which does not comply with the rules must be ignored.

(1) See "General" above. (2) Every question and every print for criticism must be sent separately through the post, and must be accompanied by a *separate* stamped addressed envelope. No exception can be made in any case to this rule, except so far as enquiries or prints from Overseas are concerned. (3) Neither enquiries nor prints for criticism must be enclosed with competition prints. (4) On the back of each print sent for criticism, in addition to the name and address of the sender, must be the title (if any), and the criticism coupon from the current issue. (5) Enquiries should be clearly written, on one side of the paper only, and should be specific and not general. Such enquiries as "How can I take interiors?" or "Can you give me some hints on outdoor portraiture?" are too general to be dealt with in this section. (6) All envelopes should be distinctly marked "Query" or "Criticism," as the case may be. (7) Prints are sent for advice or criticism on the distinct understanding that by so doing permission is given for their reproduction without fee. We endeavour to deal promptly with enquiries, but cannot undertake to answer by return of post, nor can we give precedence to any enquiry.

A selection of those replies is printed each week, but all questions are answered by post. Enquiries from abroad must contain a coupon also, but it need not be from the current number, and should be cut from the latest issue to reach the enquirer.

## Washing Prints.

Will you please tell me what is meant by the "two-dish" method of washing prints?  
L. L. (Chelmsford.)

We have advocated this method for many years, but we realise that the oldest of information is new to novices, and we are always willing to repeat old tales for the benefit of new-comers. The prints, after fixing, are assembled in a dish of water. From this they are lifted one by one, well drained, and transferred to a second dish of clean water. While they are lying in this the first dish is emptied, rinsed out, and refilled. Repeat the transfer as before. The prints thus pass from dish to dish, till they have had about a dozen transfers spread over, say, an hour. Rather large dishes are best, and the draining of the prints at each transfer is important.

## Faded P.O.P. Prints.

Is there any way of restoring a badly faded P.O.P. print that I have?  
W. M. (Giffnock.)

We do not know of any method which you could safely adopt for attempting to restore the print. If parts of the image have disappeared nothing can be done, but if the whole print has changed to a yellowish colour, as sometimes happens, you should try photographing it on a slow ordinary plate. In favourable cases this often gives a very striking result, and from the new negative you can get prints perhaps as good as the original, or even better.

## Reticulation.

Can you tell me the cause of the wavy lines in the enclosed negatives?  
W. B. (Reading.)

The marks on your negative appear to be very slight reticulation of the film. This may be due to various causes, but generally to the transference of the negative from one solution to another of very considerably higher or lower temperature.

## Books on Photography.

Can you send me a list of photographic books suitable for a beginner?  
M. J. (Bournemouth.)

There are many books available that would no doubt be useful to you, but obviously we cannot select them for you. We do not know of any book on the manufacture of photographic materials, but books on the other subjects you name are certainly available. We should advise you to write to Messrs. Sands Hunter & Co., Ltd., of 37, Bedford Street, Strand, London, W.C.2, for their list of books, and decide for yourself which of them would be the most suitable for your purposes.

## Hypo Eliminator.

Would you recommend a "hypo killer" for eliminating the hypo quickly out of negatives and papers after washing? If not, what are its disadvantages compared with the usual method of plain water? Will prints washed in a hypo eliminator be as permanent as the other method?  
P. C. (Rhyl.)

We have more than once explained our reasons for not advocating the use of so-called hypo-killers. The trouble with most of them is that other compounds are formed which may do as much harm as the hypo itself. This means that it is a matter of uncertainty whether the prints will last or not. We have frequently described what we consider the quickest and best way of washing prints in plain water, and we know of nothing better.

## Black Spots on Prints.

What is the best way of removing or retouching the small black spots on enlargements, as I find it rather difficult to spot the negatives?  
J. G. (Stoke-on-Trent.)

If you refer to black spots on your enlargements due to clear spots in the negatives it would certainly be worth your while to learn how to retouch the spots on the negative itself. You can do this by a touch of a very fine pen

with a little indian ink. This will give a white spot on the enlargement, which can be filled in by fine stippling with a brush and water-colour. Another method which requires more skill is to remove the black spot from the surface of the print with the point of a retouching knife.

## Lens for Reflex Camera.

Can you tell me why only focal-plane shutters are used for reflex cameras? Why are not the Compur type used for these cameras? Can the lens of a reflex camera be used for an enlarger?  
W. H. (Cromer.)

The reason why reflex cameras have focal-plane shutters is that it is necessary for the lens to be open all the time. If you have a Compur shutter you would have to open it to see the image, and then you would have to set it to make the exposure, although there is a special Compur shutter made for the latest Mentor reflex which allows of a quick resetting. In such a case you could not see the image right up to the moment of exposure as you can when a focal-plane shutter is fitted. There is no reason why you should not use the lens of a reflex camera for an enlarger.

## Prints for Reproduction.

I am anxious to illustrate a book I am writing, and in order to obtain the necessary photographs for the printing blocks, would like to know the following: Are the negatives necessary for reproduction purposes; what size of prints is best; what price should I be expected to pay?  
A. C. (Oxford.)

For reproduction purposes you require a clean bright photograph, and not a negative. The size of the prints depends to some extent upon the size of the blocks to be made from them, but it is generally advisable to have the print at least half as large again as the block is to be. It is advisable to have prints in black-and-white and on a glossy paper when blocks are to be made from them. We cannot give you any idea as to prices either for prints or negatives, and we think you might apply first to some of the London Press agencies, who would probably have in stock most of the photographs you would want.

## Focal Length of Lens.

What is the best focal length of lens to employ on a quarter-plate camera for general work, including architecture? I enclose a negative that has a curious distorted image; can you suggest a possible cause of this?  
M. L. Y. (St. Albans.)

A  $5\frac{1}{2}$  or 6 in. lens is a good all-round one for a quarter-plate. The wide-angle lens would certainly be useful in the case of some interiors. When it comes to small objects, however, it is sometimes an advantage to have a longer focus lens, so as to be able to keep well away from the subject and so get good drawing. At the same time, the longer focus will give you less depth, and this may sometimes necessitate considerable stopping down. The photograph you send is a striking example, and we have no doubt that the cause was the fact that the film was buckled instead of lying in one plane. This often happens in the case of bellows cameras, when the front is drawn out hurriedly and the suction of air draws the film forward.

# The Amateur's Emporium

## Business Notices

### Publishing

**OFFICES.**—Dorset House, Stamford Street, London, S.E.1. Telegrams: "Amaphot, Sedist, London." Telephone: Hop 3333 (50 lines).

**PUBLISHING DATE.**—"The Amateur Photographer and Cinematographer" is on sale throughout the United Kingdom every Wednesday morning.

**SUBSCRIPTION RATES.**—British Isles 17/4 per annum, Canada 17/4, other countries abroad 19/6 per annum, post free.

**REMITTANCES.**—Cheques, etc., should be crossed and made payable to Iliffe and Sons Ltd. "The Amateur Photographer" can be obtained abroad from the following: **UNITED STATES:** The International News Co., New York. **FRANCE:** W. H. Smith & Son, 248, Rue Rivoli, Paris; Hachette et Cie, Rue Reaumur, Paris. **BELGIUM:** W. H. Smith & Son, 71-75, Boulevard Adolphe Max, Brussels. **AUSTRALIA:** Gordon & Gotch, Ltd., Melbourne (Victoria), Sydney (N.S.W.), Brisbane (Queensland), Adelaide (S.A.), Perth (W.A.), and Launceston (Tasmania). **NEW ZEALAND:** Gordon & Gotch, Ltd., Wellington, Auckland, Christchurch and Dunedin. **INDIA:** A. H. Wheeler & Co., Bombay, Allahabad and Calcutta. **CANADA:** Imperial News Co., Toronto, Winnipeg and Vancouver; Benjamin News Co., Montreal; Gordon & Gotch, Ltd., Toronto. **SOUTH AFRICA:** Central News Agency, Ltd.

### Displayed Advertisements

Communications on Advertisement matters should be addressed: The Advertisement Manager, "The Amateur Photographer and Cinematographer," Dorset House, Stamford Street, London, S.E.1. Copy for displayed advertisements for the issue of any particular week must reach Dorset House by the first post on Tuesday morning in the week previous. Rates and conditions will be sent upon application.

### Prepaid Advertisements

**SALE AND EXCHANGE: AMATEURS ONLY—**

12 words or less.....1/-

1d. for every additional word.

**PROFESSIONAL AND TRADE:—**

12 words or less.....2/6

2d. for every additional word.

Each paragraph is charged separately.

**SERIES DISCOUNTS** are allowed to Trade Advertisers as follows on orders for consecutive insertions, provided a contract is placed in advance, and in the absence of fresh instructions the entire "copy" is repeated from the previous issue: 13 consecutive insertions, 5%; 26 consecutive, 10%; 52 consecutive, 15%.

All advertisements inserted in these columns must be strictly prepaid and posted to arrive at the Head Office, Dorset House, Stamford Street, S.E.1, not later than first post FRIDAY for the following week's issue, or one day earlier at the Branch Offices, 19, Hertford Street, Coventry; Guildhall Buildings, Navigation Street, Birmingham, 2; 260, Deansgate, Manchester, 3; 28a, Renfield Street, Glasgow, C.2.

Advertisements are inserted, as far as possible, in the order received, and those received too late for one issue, or crowded out, are published in the first following in which there is space. The Proprietors retain the right to refuse or withdraw advertisements at their discretion.

Postal Orders sent in payment for Advertisements should be made payable to **ILIFFE AND SONS LTD.**, and crossed

& Co.

Notes being untraceable if lost in transit, should not be sent as remittances.

The Proprietors are not responsible for clerical or printer's errors, although every care is taken to avoid mistakes.

**BOX NUMBERS.**—For the convenience of advertisers, letters may be addressed to numbers at the office of this paper. When this is desired, the sum of 6d. to defray the cost of registration and to cover postage on replies must be added to the advertisement charges, which must include the words: "Box 000, c/o 'The Amateur Photographer'." Replies should be addressed: "Box 000, c/o 'The Amateur Photographer,' Dorset House, Stamford Street, London, S.E.1," and these letters will be simply forwarded by us to the advertiser. It must be understood that we do not deal with the correspondence in any other way, nor accept any responsibility in connection with the advertisement. Readers who reply to Box No. advertisements are warned against sending remittances through the post except in registered envelopes. In all such cases the use of the "Deposit System" is recommended.

### Special Note

Readers who reply to advertisements and receive no answer to their enquiries are requested to regard the silence as an indication that the goods advertised have already been disposed of. Advertisers often receive so many enquiries that it is quite impossible to reply to each one by post. When sending remittances direct to an advertiser, stamp for return should also be included for use in the event of the application proving unsuccessful.

### Deposit System

Readers who hesitate to send money to advertisers in these columns may deal in perfect safety by availing themselves of our Deposit System. If the money be deposited with "The Amateur Photographer and Cinematographer," both parties are advised of its receipt. The time allowed for decision is three days, counting from receipt of goods, after which period, if buyer decides not to retain goods, they must be returned to sender. If a sale is effected, buyer instructs us to remit amount to seller, but if not, seller instructs us to return amount to depositor. Carriage is paid by the buyer, but in the event of no sale, and subject to there being no different arrangement between buyer and seller, each pays carriage one way. The seller takes the risk of loss or damage in transit, for which we take no responsibility. For all transactions up to £10 a deposit fee of 1/- is charged; on transactions over £10 and under £50 the fee is 2/6; over £50 and under £75, 5/-; over £75 and under £100, 7/6; and on all transactions over £100, one-half per cent. All deposit matters are dealt with at Dorset House, Stamford Street, London, S.E.1, and cheques and money orders should be made payable to Iliffe and Sons Ltd.

## WARNING

We have received many complaints from our readers in regard to the business methods of Mr. R. L. Green, trading as R. L. Green's Photographic Exchange, of 218, Fore Street, Edmonton, London, N.18, or (possibly with different initials) as Cine Photo Supplies, 4, Holborn Place, High Holborn, W.C.1.

For some considerable time we have refused to insert his advertisements in "The Amateur Photographer and Cinematographer," and from the complaints we have received it would appear that his practice is to communicate with private advertisers having goods for sale, offering to take such goods in exchange for others, or to purchase for cash. Readers are advised to ignore all such offers from this quarter.

# LEICA MANUAL

Here is a book which represents the accumulated experiences  
of 22 specialists and pioneers in Leica photography. No  
other book has ever attempted to cover the broad scope of  
miniature camera photography as thoroughly as the LEICA  
MANUAL.

350 Illustrations. 500 Pages.

All the illustrations in the LEICA MANUAL have been  
selected with great care from thousands of pictures.  
These pictures illustrate many specific examples of Leica  
photography. In fact, it is possible to look through  
this book and study the pictures only and obtain new ideas  
and methods which can be adapted to your own work. We  
can assure you that when you obtain your LEICA MANUAL  
you will agree with us that the illustrations are of the finest  
quality and represent definite ideas in Leica photography.  
The photo-montages in this book are worth considerable  
study in themselves.

## ENSIGN SILVER MIDGET

The Ideal Christmas Gift

### 33/-

ENSIGN, Limited, HIGH HOLBORN, LONDON, W.C.1

# Gala Night at "The Laurels"!

They had a party at "The Laurels" the other night. Balloons, bon-bons, paper hats . . . the fun was fast and furious. But Kodak Super Sensitive Panchromatic Film was faster! Someone brought along a "Kodak" loaded with this lightning-speed film, and, using some simple, inexpensive Kodak Lighting Aids, captured a fine batch of happy pictures like the one reproduced here.

Remember to have plenty of Kodak S.S. Pan Film and some "Photoflood" Lamps ready for *your* Christmas parties.

How this picture was made. Two "Photoflood" Lamps in "Kodaflectors" were used, as shown in diagram. The exposure was 1 second at  $f/8$  on Kodak Super Sensitive Panchromatic Film.

**KODAK SUPER SENSITIVE PANCHROMATIC FILM**—the film of lightning speed—is made in both Roll Films and Film Packs.

**"PHOTOFLOOD" LAMPS**—plug into ordinary electric light sockets and give a brilliant, continuous light. 2/6 each.

**"KODAFLECTOR" REFLECTOR**—fits on to lamp-holder; concentrates light from "Photoflood" on to subject, increasing its efficiency at least four and a half times. 3/-

# Rolleicord

Fitted with one-lever  
Compur Shutter  
speeded to 1/300th  
sec., T. and B., and  
f/3.8 Zeiss Triotar  
lens. With leather-  
covered body **£14**

Here's the camera gift you can choose with confidence—a firmly established popular favourite which will give perfect pictures all the year round.

Rolleicord offers facilities which you don't get from an ordinary camera. It shows the picture full size and right way up on the ground-glass screen, and simply won't allow for getting "dud" pictures. It's the easiest camera any one could wish to operate, and it's very economical too. It takes 12 pictures on 8-exposure  $3\frac{1}{2} \times 2\frac{1}{4}$  roll film for 1/-, and is designed to take plate back and many Rolleiflex accessories which make it most versatile. Make it a Rolleicord gift this year and see what joy it brings.

# PHOTOGRAMS OF THE YEAR

Edited by F. J. MORTIMER, Hon. F.R.P.S., Editor of "The Amateur Photographer and Cinematographer"

"Photograms of the Year" for 1936 is now on sale and makes a most attractive volume for all who are interested in pictorial art.

Selected from the best work of the world's leading photographers, this volume reveals the remarkably wide range of subject matter that comes within the scope of the modern camera artist. Still-life, landscape, portraiture, posed figures, architecture, and the artistic interpretation of apparently commonplace detail, are all presented with consummate taste and technical skill.

*Obtainable from leading Booksellers, or direct from the Publishers*

**ILIFFE & SONS LTD., DORSET HOUSE, STAMFORD STREET, LONDON, S.E.1**

# ENGLAND'S BUYING CENTRE FOR MINIATURE APPARATUS

## SPECIALIZATION

### MINIATURE APPARATUS.

We are the only firm in Great Britain specializing exclusively in miniature apparatus such as the Leica and Contax. Every miniature camera of distinction together with a full range of accessories is to be seen at our showrooms. Where miniature cameras are concerned, we give the highest part-exchange allowances and pay the best cash prices in the trade. Any type of modern high-class apparatus taken in part exchange.

### PROCESSING.

A new approach to the problem of processing is essential if flawless negatives and perfect enlargements are to be produced from miniature negatives. Appreciating this, we have equipped ourselves exclusively to deal with the miniature negative. We pride ourselves that the results fully justify our policy.

## NEW ENLARGERS FOR LEICA, CONTAX, ROLLEIFLEX, SUPER IKONTA and EXAKTA owners.

We are pleased to announce that we are now able to supply a well-made and inexpensive enlarger to take the now popular 6x6 cm., 4.5-cm. and 4x6.5 cm. negatives.

The new enlarger, the Vertex, is of the single condenser type, with automatic column lock enabling raising and lowering of the enlarger to be carried out with one hand. The lamphouse is unusually large and well cooled, and the negative carrier of simple and convenient construction. It is fitted with an f/4.5 anastigmat and has an orange swing filter. The maximum enlargement obtainable from a 6x6 negative without swinging the head round and projecting off the baseboard, is 15x15 in., or from a 4.5x6 cm. negative, approximately 15x12 in. Price £8 8s.

The other two Vertex models are for Leica and Contax owners. They are supplied without lenses and take the Leica and Contax lenses respectively. Maximum magnification is approximately 7 times linear. Price £6 6s. each.

① **NEW ARRIVAL.**—The improved Weston Leica Meter, considerably reduced in size but greatly increased in sensitivity. Readings are now obtainable in ordinary artificial light. Price £5 19s. Leather case, 10s. extra.

② We have in stock and can enthusiastically recommend the Leica Manual, the complete guide to modern miniature photography. Price 21s.

③ We are now booking orders for the Zeiss Contaflex—photographic sensation of 1936. Expected by the end of this week. Particulars and photograph on request.

F/3.5 Foth anastigmat, self-capping focal-plane shutter, with delayed-action device, speeds 1/25th to 1/500th sec. and B. Very compact **£5:5:0**  
Nine monthly payments of 12/3.

## THE ZEISS IKON SUPER IKONTA

530 Super Ikonta with the NEW Rapid shutter. No. 530. Takes 16 pictures on standard 3½ x 2½ roll films.

Fitted f/3.5 Zeiss Tessar anastigmat, Compur Rapid shutter, speeds 1 to 1/500th sec., T. and B., self-erecting front, built-in rangefinder, ensuring critical focus for every picture **£18:12:6**

Nine monthly payments of 43/6.  
If fitted Rapid Compur, speeds 1 to 1/500th sec., 22/6 extra.

## The Multi-speed EXAKTA

Self-capping focal-plane shutter, speeds 12 to 1/1,000th sec., T. and B., delayed action 1/10th to 6 sec.

Fitted f/3.8 Zeiss Tessar anastigmat, metal focussing hood with magnifier, single focussing, 3 ft. to infinity. Takes standard V.P. films. **£27:10:0**  
Double exposures an impossibility.  
Nine monthly payments of 84/2.

## MINIATURE BARGAINS

FROM

"Camera House," 111, Oxford Street, W.1

24 x 36 mm. Kodak Retina, f/3.5 Xenar anastigmat, in Compur shutter, speeds 1 to 1/300th sec., T. and B. **£8 5 0**  
4½ x 6 cm. Baldax 2-on 120 film, f/2.9 Meyer Trioplan anastigmat, delayed-action Compur shutter, speeds 1 to 1/250th sec., T. and B. **£5 17 6**  
4½ x 6 cm. Zeiss Ikon Ikonta, f/4.5 Zeiss Tessar anastigmat, in Compur shutter, speeds 1 to 1/300th sec., T. and B. **£7 15 0**  
3 x 4 cm. Baby Ikonta, f/4.5 Novar anastigmat, 3-speed shutter. **£3 3 0**  
3 x 4 cm. Zeiss Ikon Kolibri, f/3.5 Novar anastigmat, Telma shutter and case **£3 17 6**  
4 x 6 cm. Vest Pocket Kodak, f/4.9 Zeiss Tessar anastigmat, Compur shutter, speeds 1 to 1/300th, T. and B. **£3 17 6**  
3 x 4 cm. Zeiss Ikon Kolibri, f/3.5 Zeiss Tessar anastigmat, Compur shutter, speeds 1 to 1/300th sec., T. and B. **£7 5 0**  
3 x 4 cm. Spring-box Folding, Achromatic lens. **£1 3 6**  
3 x 4 cm. Voigtlander Periko, f/3.8 Skopar anastigmat, Compur shutter, speeds 1 to 1/300th sec., T. and B. **£4 5 0**  
Leitz Leica Model II, f/3.5 Elmar anastigmat, self-capping focal-plane shutter, speeds 1/20th to 1/500th sec. and Time. **£19 10 0**  
4 x 6 cm. Piccolette, f/4.5 Zeiss Tessar anastigmat, new Compur shutter and case. **£6 10 0**  
3 x 4 cm. Ensign Midget, No. 22. 14s. 6d.  
6 x 6 cm. Watch Pocket Carbine, f/6.3 Aldis-Butcher anastigmat, 3-speed shutter **£1 10 0**  
4½ x 6 cm. Zeiss Ikon Ikonta, f/6.3 Novar anastigmat, 3-speed shutter. **£3 19 6**  
3 x 4 cm. Foth-Derby, f/3.5 Foth anastigmat, focal-plane shutter. **£3 19 6**  
4 x 4 cm. Rollei-flex, f/2.8 Zeiss Tessar, in Compur shutter. **£14 10 0**

Leitz Leica II, Model II, f/2.5 Hektor anastigmat. **£25 0 0**  
6 x 6 cm. Rollei-flex Automatic, f/3.8 Zeiss Tessar, Compur shutter, speeds 1 to 1/300th sec., T. and B. **£15 15 0**  
3½ x 2½ Superflekta Reflex, for roll films, with reversing back, f/3.8 Zeiss Tessar anastigmat, delayed-action Compur shutter. **£19 10 0**  
6 x 6 cm. Korelle Reflex, f/2.9 Radionar anastigmat, focal-plane shutter. **£2 17 6**  
6 x 6 cm. Voigtlander Brilliant, f/7.7 anastigmat. **£1 17 6**  
6 x 6 cm. Zeiss Ikon Ikonta Reflex, f/4.5 Novar anastigmat, 3-speed shutter **£5 19 6**  
4 x 6 cm. Ihasee Exakta Reflex, f/3.5 Ihasee anastigmat, leather case **£2 10 0**  
3½ x 2½ Ensign Roll Film Speed Reflex, f/4.5 Ensign anastigmat, focal-plane shutter **£5 5 0**  
6 x 6 cm. Foth-Flex Reflex, f/3.5 Foth anastigmat, focal-plane shutter. **£2 17 6**  
3 x 4 cm. Baldi, f/3.5 Trioplan anastigmat, Compur shutter, view-finder, adjusted for parallax. **£4 12 6**  
3 x 4 cm. Foth-Derby, f/2.5 anastigmat, focal-plane shutter. **£5 10 0**  
3 x 4 cm. Baby Ikonta, f/3.5 Novar anastigmat, Compur shutter. **£5 17 6**  
3 x 4 cm. Ensign Midget, f/6.3 anastigmat, speeded shutter. **£1 13 6**  
A limited number of Ensign Silent Sixteen 50 16-mm. Projectors, new and unused, at reduced prices **£24 17 6**  
Usual Retail Price £6 15s.

A precision mechanism projector capable of giving a bright, steady clear picture, for use on any house lighting circuit from 100 to 250 volts, A.C. or D.C. Supplied complete with lamp, resistance, 50-watt lamp, 6-ft. lead and plug and 400-ft. reel.

## IT'S HERE!

## The New WESTON

## 'Photronic' Exposure Meter No. 650.

(For Still or Cine Cameras) (For Leica Cameras)

NEW FEATURES: Increased Sensitivity. Simpler to use. Thinner. Complete with instructions book. **£5:19:0**  
Nine monthly payments of 13/11.

## THE CONTAFLEX WILL BE HERE NEXT WEEK

Full particulars post free on request.

Second-hand Apparatus sent on Seven Days' Approval against full cash deposit. LIBERAL EXCHANGE ALLOWANCES. HIRE-PURCHASE TERMS.

## WHATEVER YOUR NEEDS—CONSULT

## The WESTMINSTER PHOTOGRAPHIC EXCHANGE, LTD.

111, OXFORD STREET, W.1 GERard 1432.  
62, PICCADILLY, W.1 24, CHARING X ROAD, REgent 1360. TEMple Bar 7165. W.C.2  
81, STRAND, W.C.2 119, VICTORIA STREET, TEMple Bar 2710. VICTORIA 0669. S.W.1

Appointed an Associate of the Institute

of Amateur Cinematographers, Ltd.

## The VICTORIA (Improved Model.) The ideal camera for Autumn photography.

F/2.9 Schneider Radionar anastigmat, delayed-action Compur shutter, speeds 1 to 1/250th sec., T. and B. **£6:15:0**

Nine monthly payments of 15/9.

16 pictures 2½ x 1½ on standard 2½ by 3½ roll film.

Body of camera is moulded from practically indestructible plastic material, the surface being attractively finished. Leather bellows are fitted and the metal parts of camera are plated.

## THE BALDAX

Takes 16 pictures on standard 3½ x 2½ roll films.

F/3.5 Meyer Trioplan anastigmat, Ihosor shutter, speeds 1 to 1/500th sec., T. and B. **£6:5:0**  
Nine monthly payments of 14/7.  
F/3.5 Meyer Trioplan anastigmat, Compur shutter, speeds 1 to 1/300th sec., T. and B. **£7:7:0**  
Nine monthly payments of 17/2.

## ZEISS IKON IKONTA '520'

Takes 16 pictures on standard 3½ x 2½ roll films.

F/4.5 Zeiss Novar anastigmat, Telma delayed-action shutter, speeds 1/25th, 1/50th, 1/100th sec., T. and B. **£6:2:6**  
Nine monthly payments of 14/1.

F/4.5 Zeiss Tessar anastigmat, Compur shutter, speeds 1 to 1/300th sec., T. and B. **£10:0:0**

Nine monthly payments of 22/4.  
F/3.5 Zeiss Tessar anastigmat, Rapid Compur shutter, speeds 1 to 1/300th sec., T. and B. **£11:17:6**  
Nine monthly payments of 27/9.

## The RETINA For 36 pictures on 35-mm. film.

F/3.5 Schneider Xenar anastigmat, Compur shutter, speeds 1 to 1/300th sec., T. and B. Optical direct-vision view-finder **£10:10:0**

Nine monthly payments of 24/6.

As above but with Rapid Compur and speeds up to 1/500th sec. **£12:0:0**

Nine monthly payments of 28/-.

# THE AMATEUR PHOTOGRAPHER

## & CINEMATOPHIL

EDITOR  
F.J. MORTIMER

INCORPORATING "THE NEW PHOTOGRAPHER" "FOCUS"  
"THE PHOTOGRAPHIC NEWS" & "PHOTOGRAPHY"

Subscription Rates: United Kingdom 17/6, Canada 17/6, Other Countries 19/6 per ann. post free from the publishers Dorset House, Stamford Street, London, S.E.1

WEDNESDAY, DECEMBER 4TH, 1935.

Copyright—Registered as a Newspaper  
for transmission in the U.K.

VOL. LXXX. No. 2456.

THE next issue of *The Amateur Photographer*, which will be published on Wednesday, December 11th, will be our Christmas Number. It will also be a special "Christmas Presents" Number, as, in addition to a greatly increased number of pages devoted to seasonable articles and illustrations, considerable space will be occupied with suggestions for presents—photographic in character. In previous years, this feature of "The A.P." Christmas Number has always been highly appreciated by a great majority of readers, who not only gather from it useful ideas on the difficult matter of suitable gifts to bestow at the present time of year, but on many occasions we know that copies of this issue judiciously placed in the right quarter have proved helpful in deciding the choice of presents to be received. Readers should note the above date and secure copies of "The A.P." Christmas Number promptly. It will be an excellent threepennyworth.

### "Photograms of the Year."

The new volume of that most popular of annuals, *Photograms of the Year*, will be published during the present week. Again it not only sustains its international character in the matter of pictures and articles, but the reproductions are as fine as ever. They represent the high-water mark in pictorial photography, and form a representative collection of the best work produced during the past year, without bias towards any one particular "school" in picture-making. Orders for the new volume should be placed at once with newsagent or dealer. The price is 5s. in stiff paper covers, or 7s. 6d. cloth bound.

## TOPICS of the Week

DECEMBER MORNING.

*A winter silhouette in Hyde Park at the Serpentine.*

If ordered direct from the publishers, Iliffe & Sons Ltd., Dorset House, Stamford Street, S.E.1, the prices, post free, are 5s. 6d. and 8s. respectively.

### Stolen Cameras.

The greater portability of modern miniature cameras has rendered them particularly liable to theft. This is evidenced by the great number that have been reported "stolen" in these pages during the past year. In view of this state of affairs we suggest that readers proposing to purchase a second-hand miniature camera of the more expensive type, such as Leica, Contax, Rolleiflex and Ikonta, should first enquire of the respective manufacturers to ascertain if the camera is on their list of stolen goods. This applies more particularly when dealing with strangers. Failure to observe this precaution may lead to the camera being forfeited in the event of a repair or adjustment necessitating its return to the manufacturers. The serial numbers engraved on the lens and camera itself should be quoted when making the enquiry.

### As Near Perfection . . .

The demonstration of the new Kodachrome process of 16 mm. in colour cinematography at the Royal Photographic Society on Tuesday evening was a really great event. Two reels were shown, one an English and the other an American production, both including every variety of subject that the amateur would ordinarily take—subjects rioting in colour and subjects subdued, subjects lively and subjects slow. Their excellence was acclaimed with almost continuous applause by an overflowing audience. Kodachrome

was stated by the demonstrator, Mr. E. R. Davies, to be the only practical subtractive process in which one and the same film both effects the colour separation in the camera and produces, after passing through a suitable reversal process, a colour print for projection. Three superimposed emulsion layers sensitive to the primary colours cause the colour separation to be made automatically during exposures. These are afterwards converted into three dye layers of the complementary colours which, being superimposed, give the desired colour print. The difficulty is in the processing, but the amateur cinematographer does not take a hand in processing in general. The processing was elaborately explained, however—four

developments followed by four bleaching baths, involving the carrying out of quantitative chemical reactions in sharply restricted layers of gelatine film which itself has a total thickness of less than one-thousandth of an inch. But from the point of view of the user, he can handle Kodachrome as he would handle ordinary ciné film, taking colour photographs in a ciné camera without recourse to high-aperture lenses. Artificial-light photography presents no particular difficulty except that a compensating filter should be used to reduce the high proportion of red light present in artificial illuminants. "Most people will agree," said the chairman, after the two reels had been projected, "that we have never seen

pictures like these before—pictures, too, produced in a comparatively easy way by the amateur, though not so easy for the processor, and still less easy for the people who have had to put up the tremendous apparatus and go through the necessary research. But we are getting nearer to perfection every time, and this is the nearest I have seen."

### Photography cannot lie.

It was interesting to hear of a famous golf professional who has been careful to teach all his pupils not to twist the wrist. Recently he went to see the first ciné picture taken of him in action on the links, and he discovered that he himself was doing that very thing!

## "The Amateur Photographer" EXPOSURE TABLE—December

EVERY MONTH a brief exposure table will be provided for the assistance of our readers in their practical work. A glance at the current approximate exposures as here given will serve as a reliable guide for most purposes. The subjects will be varied to suit the time of year. The following exposures will serve as a working guide for any fine day during the month, between the hours of 10 in the morning and 2 in the afternoon, with the sun shining, but not necessarily on the subject. Stop used, f/8. The exposure should be doubled if the sun is obscured or if stop f/11 is used. For f/16 give four times the exposure. For f/5.6 give half. From 8 to 10 a.m. or from 2 to 4 p.m., double these exposures. From 7 to 8 a.m. or from 4 to 5 p.m., treble them.

SUBJECT.	Ordinary.	Medium.	Rapid.	Extra Rapid.	Ultra Rapid.
Open seascapes and cloud studies .. ..	1/20 sec.	1/30 sec.	1/60 sec.	1/80 sec.	1/100 sec.
Open landscapes with no very heavy shadows in foreground, shipping studies or seascapes with rocks, beach scenes ..	1/10 "	1/15 "	1/30 "	1/40 "	1/50 "
Ordinary landscapes with not too much foliage, open river scenery, figure studies in the open, light buildings, wet street scenes	1/4 "	1/6 "	1/12 "	1/15 "	1/20 "
Landscapes in fog or mist, or with strong foreground, well-lighted street scenes ..	1/3 "	1/4 "	1/10 "	1/12 "	1/15 "
Buildings or trees occupying greater portion of pictures, river scenes with heavy foliage	3/4 "	1/2 "	1/4 "	1/5 "	1/6 "
Portraits or groups taken out of doors, not too much shut in by buildings .. ..	2 secs.	1½ "	1 "	1/2 "	1/3 "
Portraits in well-lighted room, light surroundings, big window, white reflector ..	6 "	5 secs.	3 secs.	2 secs.	1½ "

As a further guide we append a list of some of the best-known makes of plates and films on the market. They have been divided into groups, which approximately indicate the speeds referred to above. The hypersensitive panchromatic plates and films require less exposure than the ultra-rapid.

Ultra Rapid.	Ordinary.	Medium.	Rapid.	Extra Rapid.	Ultra Rapid.

# Notes on Effective Mounting

In the presentation of the print careful consideration must be given to the effect of the mount. In the following article some of the points which bear upon this subject are dealt with.

THE effect of the mount is by no means the least important consideration in the production of the pictorial photograph. The purpose of the mount is to protect the print from injury, and to allow of its being seen isolated from its surroundings.

It is not so many years ago that the mounting of the print was subject to a very great deal of consideration, and also a very great deal of effort was expended upon what were termed "multiple" mounts, which were built up by a series of several tinted "art" papers, mostly of dark shades. These multiple mounts often entered into competition with the print for attention, and very often succeeded.

The modern photographer uses simple mounts, mostly of light tone. It is safe to say that not only is the result more satisfactory with regard to the purpose of the mount as it affects the individual print, but the general effect of an exhibition of photographs is much better.

It is also true to say that many modern photographs sent in to competitions, and others which are made for private use, bear evidence of the fact that the choice of the mount has had but very little consideration.

It would seem that any piece of light-toned card of standard size will serve. This is a mistake, for careless mounting will detract from the quality of the result, no matter how well produced the print may be.

## The Mount.

The particular type of mounting material chosen is a matter for individual choice. The surface should not be too smooth, and as a general rule anything in the nature of a glazed surface should be avoided. The surface of the mount should be in keeping with the surface of the print and the subject.

Some very effective results can be obtained by the use of the rougher

grades of paper such as Whatman, especially in the case of large prints and broad effects.

With regard to the colour of the mount this should be influenced by the tone of the print. In the case of bromides, ivory white is better than dead white; the latter often has the effect of killing the tones of the subject. Chloro-bromides are very effective upon a very light cream, and if the print is sepia toned a deeper cream may be used. Deep tints should be avoided.

## The Size of the Mount.

This again is a matter for individual consideration. Exhibition prints have to conform to certain specified sizes of mounts. It sometimes will be found that a small print will look well upon a large mount, and appear to gain in scale. On the other hand, large prints will be more effective with a narrower margin. Further, a large print upon a very large mount often appears unwieldy, and out of proportion. Finally, in these days of smaller houses, a large print and mount is not a desirable combination.

## The Position on the Mount.

It need hardly be said that the relative proportions of the print and mount should correspond, that is to say, the longer dimension of the print and mount should be parallel. The surrounding margin should be wider at the bottom than at the top. The print should not be exactly central on the mount. In this position it may appear as if it is in danger of dropping off the mount.

When a tint is used it should be in harmony with the colour of the print and that of the mount, and the most effective results will be obtained with a narrow tint.

When a tint is used it is often an advantage to finish the print with a very narrow black border, of 1/16th of an inch, made in the print itself.

This can be obtained by cutting through the film with a sharp knife and straight-edge, and carefully removing the film outside the line of the cut.

## Cut-out Mounts.

The cut-out mount is less in favour than formerly, but this style of mounting can be very effective if neatly done. This is especially the case with small prints upon large mounts. An effective finish for prints mounted in this way can be made by the addition of a few lightly-ruled lines. Any work of this kind, or the addition of a title, needs to be very well done, or the effect will be the reverse of that intended.

In all cases the addition of a title and signature to the print is a matter for more consideration than it usually receives. Very careful lettering, on a small scale, and applied with a light touch by a fine-pointed blacklead pencil, is the best method to adopt.

The value of the white or light-coloured mount for pictorial photographs has been emphasised in exhibitions in recent years, for the reason that the print must be of high quality to stand up to it.

In earlier times the coloured and dark mount was employed in many instances to bolster up a poor print. Many of these prints, if mounted with a plain white surround, would simply look muddy, dull and entirely poor in quality.

The light mount, therefore, has had a clarifying effect in not only brightening up print quality generally, but rendering the perfection of tones—from the highest whites to the blackest shadows—a matter of necessity. This urge has resulted in the making of still better prints for exhibition purposes. In this way the mount has played a useful part in a minor degree to that of modern materials for making the print itself.

# Story-telling with a Camera

By ALLAN FANNING.

*Recording Happy Incidents in Your Home*

A DELIGHTFUL and amusing evening may be spent with the family or friends in the planning and taking of an indoor series of photographs. Such incidents as "Sonny in the jam cupboard," "Jip chewing

1. *Mixing the Pudding.*

father's slipper," etc., are well worth illustrating, and require only simple apparatus, plus a little patience and arrangement.

Apart from the interest that is aroused in the production of story photographs in the home, the fact that any or all of them will make good Christmas or greeting cards is an argument in favour of attempting them at the present time of year.

It is the humorous or mischievous story that appeals, for it invariably results in great fun for those partaking in it. Children, and children with animals, make good subjects, as do mother and father in those humorous series of husband-and-wife affairs. Three pictures are ample to illustrate a story, which should have the climax in the last picture.

2. *"That smells good."*

Having constructed your story, it is a good idea to plan the arrangement of subject matter and position of camera in your mind beforehand. A plain background is best for accentuating your subjects, and proper surroundings essential for giving "atmosphere" to the story. It would never do for a kitchen incident to take place in the drawing-room. Light backgrounds reflect more light and give contrast to the darker garments worn in winter.

The wide range of lighting equipment of to-day enables the amateur to make full use of his photographic apparatus. The simple and cheap flashlight permits the box Brownie to take slow-moving pictures at the usual  $f/11$  stop. Tripod and white screen reflector are essential in this case.

Instructions in flashlight photography have frequently been given in the pages of "The A.P.," and, in any case, full directions for use are supplied with every packet of any popular flashlight powder, such as Johnson's.

The illustrations to this article were all made on Kodak S.S. Panchromatic film with 15 grains of flashpowder. The lens aperture was only  $f/11$ , but fully-exposed negatives were secured and giving an excellent range of tone throughout.

The flash was fired slightly to the left of the camera

3. *Opportunity makes the thief.*

(which was supported on a tripod) and held fairly high. The angle can be seen by examining the shadow of the dog's head in No. 1.

Photofloods with fast panchromatic material allow the photographer to employ snapshot speed at  $f/6.3$  stop. These lamps, with their useful stands, can be placed practically anywhere, and may be used to give soft pictures by placing white tissue paper over the reflectors.

In all cases a preliminary rehearsal should be arranged. This enables the posers, especially kiddies, to become interested, and so forget the camera.

Such work enables the amateur photographer to think for himself, both in the planning of details and the recording of them, for one spoilt picture is like a missing link from the chain of the series.

Those who are slide-makers and have a lantern available will find sets of such subjects exceedingly popular.

## SUPER NETTEL

Illustrated 32 - page Super Nettel catalogue will be sent free on request. Most high-class camera dealers stock Zeiss Ikon photographic apparatus, name of nearest dealer on request.

# DEVELOPMENT de LUXE

By Dr. A. L. BASHAM.

IF there is one thing surgeons hate it is working in the dark. It is the same with photographers. We also dislike working "blind." As all good photographers eventually come to use panchromatic emulsions, the bugbear of dark-development comes with them.

I have tried all the methods, beginning with desensitising, and candle-light development. Fogging, because the plates were held too close to the light, made me change to a bright green safelight. Then I dropped this method as a little slow for numbers of plates, and used time and temperature with a tank.

But I soon discovered that however careful I was in measuring the correct exposure, some plates were over- and some were under-developed. Reduction and intensifying never gave me very pleasing results. It was also quite impossible to develop any "experimental" plates by this method.

The control of tricky subjects, such as portraits, sunsets, and similar types of negatives, where over- or under-development must be avoided, is naturally out of the question. This is a fatal objection. It is true that contrast can be controlled by time of development, but only where conditions are reasonably constant and under control as in a studio.

## First Experiments.

I finally settled down to a year or two of development with the desensitiser (red Desensitol) in the developer, and after a minute and a half in the dark turning on the bright-green safelight. The red solution looked black in the more or less monochromatic green light, and the plate was thus kept in comparative darkness, and so was additionally safe.

This procedure worked well except after my holidays, when the development of some 70-100 negatives became very laborious and prolonged. The mess on the fingers, and table and dishes, from the spilt developer and desensitiser, was rather objectionable though easily removed afterwards. It also wasted the Desensitol.

Faced with a yet bigger batch this year, and not much time to develop them all, and give them that personal attention and touch (so beloved of the more superior advertisements), I felt something different would be needed; a cleaner, quicker and less irksome method, where observation could be more or less continuous to retain that "personal touch." (For no photographer in his soul really trusts "time and temperature" absolutely; that is, he doesn't believe his exposure calculations to be infallible. There are too many variables: plate speeds, colour of light, accuracy of shutter speeds. Also it is impossible to know exactly what degree of contrast he wants or will even get, except from long experience and fairly constant conditions.)

Some tank method was compulsory to deal with quantities of negatives, and desensitising, to allow observation. Weak developer was also necessary to enable a large number to be watched at leisure, and without undue hustle. The method finally adopted can be tabulated as follows:

- 1.—Place plates (or film pack) in one (or more) racks. This can be done in any dark cupboard.
- 2.—Rack is dropped in tank of clean water, lid closed. Any light may be switched on. After three or four minutes lights are put out.
- 3.—Rack is dropped in tank of desensitiser and left for 1½ to two minutes, occasionally reversing tank (with the lid clamped down, light may be turned up).
- 4.—When plates are desensitised bright green safelights alone are left on.
- 5.—Rack is removed from desensitiser, drained a moment, and placed in developing tank, developer 1:60 to 1:100, according to number of plates. (1:20 usual strength for dish development.)
- 6.—Plates are now developing. After a few minutes slide up each plate in turn, beginning at end of tank nearest the light, and examine them for image. Those that are appearing comparatively quickly can be placed at one end of the tank, so that they may be looked at more frequently than the slow ones, which may be left to themselves at the other end. The rack is periodically lifted up and down in the tank.
- 7.—As plates become fully developed, according to subject and requirements, they are removed, momentarily rinsed, and dropped into acid hardening hypo. (Ilford Alum Formula.) When all are in the hypo white light may be turned on.
- 8.—When the plates are fixed, they may be all washed together in running water with occasional emptying of the tank.

When the plates are placed in the desensitising tank (3) a second rackful may be placed in the tank of water (2), and then desensitised when the first rack is in the developer. They can be developed then, alongside them, if developer is weak, say 1:100, so that they can all be examined without hurry.

As tabulated above, the procedure may sound long, and elaborate, but actually it is quite quick enough for anybody (except the Press photographer), and by the time all the plates in one rack are fixing, fifteen to twenty minutes have flown by.

Two tanks of developer and two of hypo are required, if two racks are to be developed as described; but however many racks of negatives are to be developed only two light-tight tanks are

required. In a good dark-room these need only be ordinary tanks with loose fitting deep-sided lids.

The developing and hypo tanks are simple and rectangular, and made of nickel silver, dimensions 5½ in. long, 3½ in. wide, 5½ in. deep. They were made for me, by a well-known firm of developing-tank makers, for 5s. each. They are robust and will last for ever. The extra racks (all holding twelve quarter-plates or cut-film holders) have extra long handles so that they project well out of the top of the tank, and the fingers are not liable to dip into hypo or developer, or both. They will not, of course, do for the sealed tanks, since the lids will not go on. The capacity of the tanks is 50 fluid ounces.

It is essential to keep tanks, like dishes, for the same solutions each time, especially the fixing tank, which becomes blackened, and so easily recognised. Each tank should have a letter or number scratched or etched with acid on it.

A theoretical objection is manifest to the method of development described, and that is, that different types of emulsion take different times to develop: Hypersensitive, for instance, taking twice as long as ordinary pan (H. & D. 400).

## Practical Work.

In practice, however, I have found it quite unnecessary, as a rule, to segregate the different plates, and have developed ordinary, soft-gradation, hypersensitive pan, and infra-red all in the tank together. In fact, as the slower plates go into the fixing bath the next faster plates are about ready for attention.

It is never advisable to use developer much stronger than 1:60, since the plates develop too rapidly for sufficiently leisurely inspection. 1:70 or 1:80 is a very useful strength, decreasing to 1:100 if a larger quantity (say two dozen) are being treated simultaneously. Even 1:100 (1/5th strength for dish development) will develop a second batch of plates, though more slowly. It may be freshened with a little more concentrated developer. Two tankfuls will thus be sufficient for forty-eight plates.

Besides the "artistic" pleasure in such a leisurely, yet "rapid" method of development, the results have been very gratifying, pinholes and other blemishes have vanished almost completely, showing dish and air bubbles are more often the cause than dust and bits off the dark slide. Never have I had so many batches of uniformly and correctly developed negatives (with such little mess), in spite of all sorts of variations in exposure and subject.

I give the above method as a possible procedure for large quantities of panchromatic plates, but various modifications will suggest themselves to readers, whose conditions will vary in all sorts of different ways.

# December

By M. LIVINGSTON  
and J. G. TANNER.

The quiet country by-ways will provide the most profitable field of activity, and along these country lanes the photographer will find his most likely subjects.

Composition should be carefully considered before exposure, and par-

*December Ploughing.*

IT is during the last month of the year that the average camera is often most neglected for outdoor work. Yet it is at this time of year that so many fine pictures have been made, and there is still plenty of scope, even for the "snapshot," apart from topical "flood pictures" which are to be seen in some places at the present time.

In December Nature's tints are gradually subdued until most subjects are reduced almost to monotonies, and have little to lose, and sometimes actually much to gain, by reproduction.

The rising mists, depressing to the eye, are of infinite service to the camera lens, for they subdue the backgrounds and middle-distance and throw the foreground into that strong relief so valued by the pictorialist.

All about the countryside, activity continues, and in a fashion not less picturesque than was the haymaking and harvesting of a few months ago. The corn-fields go under the plough, and in many places this is still drawn by two, or even three, large horses which never cease to please as a camera subject.

Hedges are cut and trimmed, frequently by old countrymen who have spent a long lifetime at the job, and in the woods the forestry work presents innumerable opportunities for interesting studies. Here, and also in the garden, small bonfires feed on the twigs and fallen leaves, and the smoke is a decorative asset in the view of the photographer.

*Cutting chestnut to make palings. A December woodland scene.*

*The Pomp of Yesterday.*

ticular attention given to foreground shadows, which should always be shown falling across the foreground. Consequently, the sun must never be shining directly behind the photographer. Remember it is the shadows which emphasise the sunlight. Good compositions can be arranged by the isolation of some definite splash of sunshine, and in this connection be on the look-out for over-assertive

# in the Country

high-lights near the edge of the picture. Choice of viewpoint is important, and adopting a more distant one than appears to be necessary will allow a margin for correction and subsequent adjustment in the enlarger.

In country scenes a figure in harmony with the surroundings will often help the composition, and one should be included if at all possible. Remember that although the countryside may seem quiet and peaceful to the casual observer, the farmer has

*The first touch of winter. Hoar-frost in the woodlands.*

*Homeward Bound.*

Panchromatic plates used with a pale filter are the most efficient negative materials, and this is especially so if parts of the sky enter into the picture, as these often strike a competitive note with the sunlight.

On account of the soft lighting conditions which prevail during winter, negatives should be given normal development according to the plate-maker's instructions.

A perusal of the Exposure Table published monthly in "The A.P." will provide a thoroughly sound guide to exposure. (The Exposure Table for December is given on another page in this issue—Ed.)

work to do every day in the week.

The brevity of sunshine during winter will limit the photographer's work to the middle hours of the day—between about 10 a.m. and 2 p.m. in mid-winter.

On the technical side no serious difficulties should arise. As the light is weak at this time of the year, and small apertures are often necessary, a tripod will frequently be required. An efficient lens hood should always be used, especially if the camera is fitted with a wide-aperture lens.

# NEWS AND REVIEWS

ITEMS OF GENERAL INTEREST FROM ALL QUARTERS.

**Vertex Enlarger.**—A new vertical semi-condenser enlarger for miniature negatives has just been introduced by Mr. R. G. Lewis, the miniature camera specialist, of 202, High Holborn, W.C.1. It has a particularly large lamp house designed for cool working, and takes all sizes of negatives from Leica size to  $2\frac{1}{2} \times 2\frac{1}{4}$  in., a mask for each size being provided.

Focussing is by one-hand control. It enlarges to  $15 \times 15$  in. on the baseboard, or to much greater sizes when swung outwards. The price, complete with f/4.5 anastigmat, is £8 8s.

The Canadian Pacific announce that a new series of travel moving pictures featuring Canada, steamship life, cruises, etc., will be shortly available for borrowing. Under certain conditions the films—which are either 35-mm. or 16-mm., both silent and with sound—may be borrowed free. Further particulars may be obtained from Publicity Department, Canadian Pacific Railway, 62, Charing Cross, London, S.W.1.

**Messrs. Johnson & Sons,** of Hendon Way, Hendon, N.W.2, have just issued particulars of a new Flash-light Competition. Cash prizes are offered and there is no entry fee. The closing date is February 29th, 1936. Full particulars and rules will be supplied to any reader of "The A.P." on application to the above address.

**Messrs. R. F. Hunter Ltd.,** of "Celfix House," 51, Gray's Inn Road, W.C.1, inform us that a third edition of Dr. Walther Heering's "Rolleiflex Book" is now ready. This work is just as useful to "Rolleicord" users as to the users of "Rolleiflex" cameras. The price of the new edition is 4s. 6d., as against the previous price of 6s. Copies will be obtainable from "Rolleiflex" and "Rolleicord" stockists all over the country.

The University of London Animal Welfare Society is anxious to obtain photographs of animals such as cats and dogs and birds which have been accidentally trapped in gins laid for rabbits and stoats. Prints should be sent to the Education Secretary, 32, Russell Square, London, W.C.1.

The members of the Birmingham Photographic Society are holding their annual dinner at the Imperial Hotel, Birmingham, on January 11th, 1936. Tickets may be obtained from the Hon. Dinner Secretary, G. H. Willett, 187,

May Lane, King's Heath, Birmingham, 14, or from the Hon. Secretary, B.P.S., York House, Great Charles Street, Birmingham.

The Secretary of the British Film Institute has asked us to announce that the closing date for the Third Amateur Film Festival to be held in Glasgow in January next has been extended to 31st December. It should be pointed out, however, that the films do not have to be sent in until January 11th, but entry forms should be forwarded as soon as possible, and not later in any case than December 31st. The address of the Secretary is 80, Buchanan Street, Glasgow, C.1.

"The American Annual of Photography 1936" has just been published, and is now available in this country. Chapman and Hall, Ltd., 11, Henrietta Street, W.C.2, have been appointed sole British Empire agents, and the annual is obtainable from them or from Sands Hunter & Co., Ltd., 37, Bedford Street, Strand, W.C.2. The book is edited by Frank R. Fraprie, Editor of our contemporary "American Photography," and is again an excellent production, containing a large number of articles on photographic subjects and an interesting collection of reproductions of pictures that have appeared in exhibitions and competitions during the past twelve months. The price in paper covers is 8s. 6d., post free 9s.; or cloth-bound 12s. 6d., post free 13s.

**Correction.** In our recent review of the new Ilford Photo-Electric Exposure Meter the price was given as £3 5s. This should have been £3 3s.

The above photograph was taken on Saturday, November 23rd, at the Portman Rooms on the occasion of the Annual Dance and Social organised by Wallace Heaton's staff. This popular event attracted over 400 people this year, and went with a real swing. There was an exhibition of upwards of 200 photographs selected from the annual staff competition held by Wallace Heaton, Ltd. and Associated Companies.

The pictures were of considerable interest, and prizes were awarded. These included a cheque for five guineas as the first prize, and cameras, etc., made available by the kindness of Messrs. Agfa, Kodak, Ensign and R. F. Hunter, as additional awards. This competition and exhibition provide an object lesson indicating the practical knowledge of photography possessed by members of the staff of this go-ahead firm.

# how I make my EXHIBITION PICTURES

Methods and Ideals of well-known Pictorial Workers.

No. CCCX.

Mr. EDWARD  
HAIGH.

From information communicated to our Special Representative.

"THERE are three main points which I consider absolutely essential to the making of any exhibition picture, and these I always endeavour to attain; namely (1) technique, (2) composition, and (3) individuality. It cannot be too strongly stressed that those who attempt exhibition work should, as far as they are able, perfect their technique right from the correct exposure through all the intermediate stages to the finished print.

"I myself aim at a well-exposed, clear negative,

that will give me a bright print on normal bromide or chloro-bromide paper, with clear, snappy highlights and plenty of detail and luminosity in the shadows. I find that by setting a certain standard in my negatives I nearly always attain such a standard, and even those that fail to reach the highest level are not too bad. For this negative-making I favour Kodak Super-Sensitive Panchromatic cut film, both for studio and outdoor subjects, and I generally use a filter for my outdoor work.

"However attractive a photograph may be, it will never make an exhibition picture unless it is well composed. For my part I have no fixed rules for composition, and a photograph either looks right or it does not.

"Individuality, to my mind, is a very important factor, and I consider that any one wishing to attain good exhibition standard in his work should develop his own ideas and cultivate his own tastes. Much as I admire the works of Alexander Keighley, Marcus Adams, F. J. Mortimer and all the other recognised masters, it would give me little satisfaction to produce mere copies of their works.

"As most of my interest in photography lies in the taking of close-ups of heads, and in concentrating on expressions, I use a quarter-plate Adams Minex reflex camera, fitted with a Zeiss Protar  $7\frac{1}{2}$ -in. lens, and an f/3.5 Cooke 10-in. lens.

"The small reproduction, 'Sunshine,' was taken in August, about 3 p.m., with an exposure of  $1/12$ th of a second at f/11, on Kodak S.S. Pan. cut film. The other subject, 'Fair Weather,' was taken in July, about 10 a.m., with an exposure of  $1/50$ th of a second at f/8, also on the film just named. The Salon print of this picture was on Gevaluxe Velour bromide paper.

"With regard to the making and finishing of prints, I have a strong liking for this particular paper; and, given a suitable negative, I do not think there is any other paper which gives such beautiful and unique results as this does. If any retouching is necessary I do it all on the negative, so as to leave only final spotting to be done on the print itself."

(A further example of Mr. Haigh's work appears on one of the centre Art pages.)

SUNSHINE.

Edward Haigh.

# Pictorial Analysis

Every week the picture reproduced on the art page opposite will be analysed in detail for the benefit of readers of the paper who are seeking to improve their pictorial work.

"CATTLE TRACKS," by J. B. Eaton.

THIS is a reproduction of the print about which there was the controversy—referred to in "Topics of the Week," in our issue of the 13th November last—in connection with which the contentions were advanced, on the one side, that the foreground had the effect of spoiling the distance and that there was a doubt concerning the verity of the lines as cattle tracks; and, on the other, that the subject formed one of the most original and attractive landscapes seen in recent years.

In all probability, however, both sides would be prepared to admit that there is a decided attraction in the upper portion of the picture. If the subject be masked so that only the top two and a half inches are visible, a composition that is complete but constructed on conventional lines is disclosed. The strong dark of the tree (1) makes an effective centre of interest, particularly as it is emphasised by the equally forceful brilliance of the light on the meadow behind. It has the effect of pulling the lights and shadows together, and the group of cattle in what is then the immediate foreground forms an admirable subsidiary point of attraction.

The passages of alternating light and shadow lend an artistic appeal of very considerable force; there is a good feeling of air and space; and the impression of luminosity is exceedingly fine. A little more depth of tone in the immediate foreground, perhaps, would lend a greater measure of stability, but the matter is scarcely one of much moment in view of the marked attractions elsewhere, and does not appreciably modify the undeniable merit that the picture exhibits.

Taking the picture as a whole, the added length of foreground, for one thing, does provide a more stable base, and, for another, it lends a distinct touch of originality. It has been taken from a viewpoint of some

little height—a method of treatment that is most unusual in landscape proper—and the uncommon expanse of foreground follows as a natural corollary. It is, however, a departure from the normal conception of arrangement, and, inevitably, invites the criticism of those whose minds run in conventional grooves.

But, considered impartially and without any bias either way, there does appear to be a justification for

tracks, would it be easy to incorporate. Much of the feeling of novelty and individuality arises from this impression, and its virtue is that it lends an immediate attraction to the picture, whereas, in the usual run of landscapes, initial appeal is by no means a feature, their full beauty only becoming manifest after contemplation and continued study.

The possession of the quality of attracting immediate attention is valuable where pictures are intended for exhibition or when they are hung on a wall, and when, as in this instance, the first appeal is supported by enduring attractions, it enables the subject not only to stand comparison and the competition of other classes of work, but also to maintain its claim upon the attention after their interest has ceased.

Another feature that seems to derive some advantage from the extra foreground is the sense of distance. It is marked in the upper part of the print alone, but, with the addition of the lower section, it is appreciably enhanced. Nor does the addition of the foreground appear to diminish the attractions of the upper portion, so that, except for a departure from the conventional which may or may not be regarded as a drawback, all the qualities of the curtailed edition are re-

tained without impairment in the full transcription, which also shows the added advantages of immediate appeal, individuality of outlook and originality, a greater feeling of stability, the inclusion of a suggestion of decorative design, and a higher degree of unity in the arrangement. These are weighty advantages.

From the point of view of æsthetics, it is of little moment whether the tracks are made by cattle or not. This is a factor that could be regarded as forming part of the literary content, which, in a subject of this nature, is so slight as to be almost negligible, and only provides a peg on which to hang a title.

"MENTOR."

the length of foreground in the powerful emphasis which is accorded to the principal point of interest (1)—which remains the same in both editions—by the leading lines of the cattle tracks. This emphasis is apparent, and one effect arising from the connection established is that a greater degree of unity is secured. They also lend a suggestion of pattern, and, with the recurring intervals of light and shade above, confer a highly decorative impression. This is quite in harmony with the subject, and renders it more effective, but, at the same time, it is not usual to find such an impression in pure landscape, nor, in the absence of such a special feature as these

# PICTURES by Novices

## SOME CRITICAL COMMENTS on the Beginners' prints reproduced on the opposite page

IN No. 1 of the prints reproduced on the opposite page—"Calm before Storm," by R. J. Francis—there is the germ of an excellent idea. The attraction lies in the sky, which is characterised by cloud forms of good shape, and the dark masses of the tree trunks are employed to set off its light and the feeling of luminosity it conveys.

### Relative Values.

As far as that goes, the print succeeds very well. The foreground, however, is exceedingly dull in tone, and instead of being of only a moderate depth is barely distinguishable from the bases of the tree boles. Moreover, there is practically no differentiation between the tone of the foreground at the base and that of the landscape immediately below the horizon in the distance.

To some extent, the lack of distinction between the values may be attributable to an indifferent illumination, and, if so, the operator is only responsible in so far as the choice of time rested with him. The effect might possibly have been foreseen, nevertheless, and if, as may reasonably be assumed, the lights were changing fairly rapidly, it would have been a simple matter to have deferred the exposure until conditions improved.

On the other hand, it rather seems as though an inadequate exposure is the real reason. It may have been thought that, to obtain a decent rendering of the sky, it was necessary to give less than would be viewed as sufficient if the landscape had been the sole consideration, but, while there may be a need for something in the nature of a compromise, it should not be allowed to extend so far as to record the landscape in such a uniform and unrelieved depth.

### Distinctions and Relief.

With a modern colour-sensitive plate or film, employed in conjunction with a light filter of moderate depth, there is not the same necessity for compromise as there was in the days before its advent, and it is a simple matter to "keep" the sky without under-exposing the landscape to such an extent that it becomes noticeable.

Had full advantage been taken of materials of this type, and had the

exposure been enough, a very considerable improvement in the rendering could be expected. Not only would the foreground be recorded in a lighter tone, but a greater difference would also become manifest between it and the distance, and, technically, the existing rendering could not stand comparison.

In its arrangement, too, the subject suffers from an excess of centrality. The horizon line occurs about the middle of the print so that the proportions of landscape and sky are almost equal, and, vertically, the viewpoint seems to coincide with the centre of the stream. Either the sky or the landscape should predominate, this depending on their relative importance. The sky, here, has obviously the greater attraction and therefore should be allotted the greater space. If three-eighths of an inch were taken from the base and a like amount added to the top, the proportions would be more suitable for the subject, and if, at the same time, the viewpoint were moved a few yards to either the right or left, the suggestion of centrality would be avoided and the lines of the banks of the stream seem less symmetrical.

### Skies in Landscape.

No. 5, "Prevailing Wind," by J. Douglas, shows a better appreciation of the proper proportions for a landscape where the sky is the more important factor, and its tone values do not disclose the same tendency towards under-exposure.

Both technically and in its arrangement it shows a superiority over the other, but the scale of the tree is on the big side, and, if seen from a greater distance, its smaller size would not compete so much with the sky for a share of the attention. It is a bit over-insistent at present, and prevents the sky from exerting its full measure of attraction, whereas, if its scale were reduced, the attraction would be more effectively localised in the sky.

In "Sunlit Arches" (3), by Frank Price, the sky is a comparatively insignificant feature, the centre of interest lying in the arches in sunshine. Nevertheless, a shade more depth would be advisable, for it would

tend to throw up the brilliance of the sunshine below, and, if a greater depth of printing does not correct matters, some improvement could be expected from the exercise of local control during printing, the sky being given an extra exposure while the remainder of the print is masked.

### Difficulties and Drawbacks.

It is necessary for the mask to be kept in motion during the extra exposure in order to avoid the expedient becoming apparent, but a trial or so will indicate how it should be done, and, once the knack has been acquired, it will be found most useful.

In the remaining subjects the sky is either partially or wholly obscured, but with a subject like No. 7, "Coombe Woods," by Ernest F. Munt, the way it shows between the interstices of the branches is a bit distracting, and local extra printing would be found of service. If it is not carried beyond a depth equivalent to that shown in No. 2, "The Cottage in the Trees," by Mrs. D. Hall, it is not likely to conflict with realism and may be safely adopted.

Incidentally, both of these prints convey an impression of having been made from fully exposed negatives, the distinctions in tone between the trees and the level ground in their vicinity being definite and decided. If the same difference in value were discernible in No. 1, much of the adverse criticism it received on technical grounds would no longer be deserved.

### Technical Considerations.

Except for a slight degree of under-printing, No. 4, "Welsh Woodlands," by A. L. Rogers, is sound in its workmanship, and here, again, the difficulties associated with the inclusion of the sky have been avoided by its omission.

The overhanging branches in No. 6, "November Days," by W. J. Berry, serve a similar purpose, and the print, in consequence, is able to display a nice effect of atmospheric mist, which amply sustains the implication of the title. The figure is well caught and placed, and, altogether, the picture possesses an appeal that is, at least, as high as any other on the page, while technically it is second to none.

"MENTOR."

# With the Beginners

## NOTES AND NOTIONS FOR THE LESS ADVANCED WORKER

Every week an article will appear under this heading dealing with a topic of interest to the novice in photography.

### POINTS ABOUT SIMPLE ENLARGERS.—II.

I SHOWED last week the difficulty of evenly illuminating any but very small negatives with a single lamp, unless a proper reflecting and diffusing arrangement is fitted to the enlarger; and even then there are difficulties and limitations. I also showed briefly the difference made by introducing a condenser.

The print of Wimborne Minster was made with a condenser enlarger, with a 100-watt pearl (frosted) lamp, with the lens at the nominal stop of  $f/11$ . It is from a  $3\frac{1}{2} \times 2\frac{1}{2}$  negative, enlarged just over two diameters on normal bromide paper. In the original print the tones range from the deepest black (in the shadows of the clergyman's clothes)

to blank paper (e.g., in the high-light on his collar). This shows that the negative, although on the delicate side, has a full range of gradation.

Considering these facts it will come as a surprise to many when I add that the exposure was half a second. I could easily arrange an enlarger so as to give  $1/25$ th of a second—or less. This is reducing the use of a condenser to an absurdity; but it serves to indicate that we have at our disposal a power which we can control so as to meet all our requirements.

A common question is, If we use a condenser what size must it be? The answer is indicated in Fig. 1. The diameter of the condenser lenses must be a little more than the length of the diagonals of the largest negative which we want it to cover. The most usual form for the purpose is that shown in the diagrams—a double plano-convex.

It is not always realised that such a condenser is, in a rough way, similar to the lenses we use in our cameras. It has a focal length, and will form an image of a sort. Some of us have found this to our cost when we have secured an image of the filament of the lamp on the enlarging easel.

Fig. 1.

Wimborne Minster.

Fig. 2.

Let us consider what happens when we use a camera with a focussing screen. There is one position of the screen at which we get a sharp image of a very distant object, or of any object not less than a certain distance away. If we move the screen nearer to the lens we cannot get a sharp image of anything at all, whatever its distance. The screen was at the "principal focus" of the lens, and we cannot go "inside" this.

But we can go "outside" it. The nearer an object is to the lens the farther away must we move the screen to get a sharp image.

Fig. 2 shows that it is just the same with a condenser. If the "object" is a light, and this is placed at a distance A from the condenser C, the condenser will form a focussed image of the light at A1. Beyond a certain distance the light will not form an image any closer to the condenser than A1.

Fig. 3.

But if we bring the light closer to the condenser, as at B, the image will be formed at B<sub>1</sub>, and the nearer the light is brought to the condenser the farther away will B<sub>1</sub> lie.

The lines (Fig. 2) from the condenser to A<sub>1</sub> and B<sub>1</sub> represent the cone of rays—a circle the size of the condenser at the base, and a point at the foci A<sub>1</sub> and B<sub>1</sub>. With the usual condensers the point is by no means a sharp one, and if the light is diffused there is no point at all, and nothing like a clearly defined cone. At the same time the greatest concentration of light is within the limits of the cone.

Of course we are not photographing the light. The purpose of the condenser is to collect rays from the light, pass them through the negative, and concentrate them as completely as possible into the lens of the enlarger. This lens occupies different positions according to the degree of enlargement; and we can now see how, within limits, we can move the light so as to shorten or lengthen the cone, and so bring its apex into the lens.

Another frequent question is as to the position of the negative in relation to the condenser. As a rule it is close to the condenser, on the side facing the lens, and there-

fore on the opposite side to the light. This is shown at N in Fig. 3. If the relative sizes of condenser and negative are something like those in Fig. 1, the negative *must* be quite close to the condenser. If it were farther away, say at N<sub>1</sub>, the cone of rays would not illuminate all of it.

Then another question: Can a smaller negative be used with the same condenser? Certainly—see Fig. 4, where N is the smaller negative. The only thing is that a good deal of the cone of rays is not passing through the negative at all. If the arrangement of the apparatus when using the larger negative (Fig. 3) were unaltered for the smaller negative (Fig. 4) the exposure would be the same, although the projected image would be smaller.

Fig. 4.

Fig. 4 shows another point that is often overlooked. When a large condenser is used for a small negative, N, the best position is not close to the condenser, but at some such position as N<sub>1</sub>, where practically the whole cone of rays passes through it.

I am afraid I shall not be able to continue this subject uninterruptedly, but I hope to complete it in time as opportunity offers.

W. L. F. W.

## Brilliancy in Lantern Slides

ONE of the qualities looked for in a good lantern slide is brilliancy, and it is true to say that many slides fail miserably in this respect when seen upon the screen.

Lantern-slide technique is exacting, but not difficult. The ideal to work for is a slide with a long scale of gradation, ranging from the delicate tones of the highest lights to the shadow detail.

This can be produced by observing two conditions: (1) Exposure of the plate sufficient for the high-lights, but not excessive for the shadow details; (2) development of the image to finality.

### Exposure.

Correct exposure is easily arrived at by a series of trial exposures in strips on the selected lantern plate under a normal negative at a fixed distance from the light. Five, ten, fifteen and twenty seconds should be given and the plate developed for at least three minutes. This will show which strip is correctly exposed. When negatives of various degrees of density have to be used for slide-making they should be sorted into batches of the same density, and a trial exposure made for each batch.

### Development.

Full development is necessary if the slide is to be of good contrast and colour. The best formula for the developer is

that given on the box in which the lantern plates are bought. This has been worked out by the makers and can be depended on for that particular brand of plate. Many slides which are made from good negatives are frequently weak in contrast, and of poor colour.

This is generally the result of over-exposure, followed by insufficient development, in the hope of saving the slide. A lantern plate correctly exposed will develop slowly, the image gradually gaining its full strength, then the action seems to stop, but the plate should be left in the developer for a little longer. The density of the image will not increase, but the contrasts, brilliancy and colour of the slide will be better. An acid fixing-bath should be used.

### Remedies.

If the lantern plate has been over-exposed (indicated by the rapid appearance of the image on pouring on the developer) brilliant slides can, however, be secured if the development is continued until the slide is overdone, clogged up and much too dense. It is fixed and washed in the usual manner, and then reduced in the hypo-ferricyanide reducer. In this, not only is the density reduced to normal, but the high-lights are cleared and a clean, bright slide is produced of a good colour.

The application of a weak solution of

this reducer is advocated by many leading slide-makers as a means of giving a little extra brightness and "snap" to the slides when projected.

If the slide is too weak intensification by means of the well-known chromium method will often effect a considerable improvement. After bleaching in the acid-chromium bleacher the slide should be thoroughly washed, and placed in a ten per cent solution of potassium metabisulphite. This will discharge the yellow stain left by the bichromate. Re-development in a non-staining developer follows. This process can convert a slide that is weak through under-development into a brilliant one.

### A Final Point.

After washing, the film side should be very gently wiped over with a tuft of wet cotton-wool. This will remove any deposit that may have accumulated during the washing. As an alternative, the plate may be placed for two minutes in a very weak solution of acetic acid, followed by another short rinse, which will ensure the slide being quite clean when dry.

Drying should be done in a dust-free atmosphere. It is perhaps well to point out that the cover-glass should be quite clean before being put on. Polishing with a rag moistened with methylated spirit will help.

# Picture Points

for Beginners, No. XXVI,  
by RICARDO

## Still Life and Shadow Arrangement

ONE can often make an interesting picture out of a simple, single object by resorting to "repetition." In this instance we are employing the use of a shadow to repeat the design as well as help fill the picture and give more variety.

But because most shadows are largely devoid of any tone variation, one must pay greater attention to their shape and position on the print to compensate for their flatness of tone.

No. 1 is a bad arrangement in this respect. Not only is the shadow a more or less exact repetition of the bowl of flowers, but is, unfortunately, placed level with them. This also leaves

the background in the form of an uninteresting rectangle.

Let us introduce variety by putting the flowers into a vase of another shape, No. 2. By lowering the light we can get even more variety in the relative position of the shadow indicated by the dotted line.

No. 3 is another example of bad arrangement and lighting. The vase and flowers fill the distance between top and bottom, but do not contribute much to the width of the print. The shadow is also thin and leads out. A complete rearrangement is to be seen in No. 4.

## Pictorial Quality in Snow Scenes

IN anticipation of at least one snowfall in this country, a few words on this subject will help beginners to make the most of their opportunities.

All too often do we see results similar to the left-hand sketch. While it could be truly called "soot and whitewash," it is admittedly a difficult subject to tackle if a natural tone rendering as well as a good tone balance is desired.

Previously in this series we have discussed the weakness of blank, even areas of tones, and here again we have another example. For all the modelling it reveals the snow might just as well be a flat piece of white card. This is where we

must look to technique if we must make the most of whatever shadows appear in order to give modelling to the snow.

All shadows on fresh snow, whether cast by tall trees or shallow ridges, are distinctly blue in colour. Remembering that by capping the lens with a yellow filter we can make a blue sky look natural in tone, we can adopt the same procedure to capture those elusive blue-toned shadows and get the effect seen on the right. This calls for a word on exposure. If we want details in the dark objects, such as the tree trunks, we must give them sufficient exposure, even though the snow is glaring white. Then a shorter development of the negative will flatten out the tone contrast but will still give details in the dark objects.

Notice how a lower viewpoint taken a little farther back has strengthened the balance of both the sky and snow and the placing of the two trees.

## Lighting for

### Good Modelling

CONTINUING our experiment from last week's issue, where we studied the effects of different viewpoints on a cube in order to secure a realistic suggestion of modelling or plasticity, we should now examine briefly the effect of different lighting arrangements.

Beginning with the cube as we left it, in its most pleasing position, No. 1, we now want variation in tone values on its three faces as well as in their areas and shapes. No. 2 certainly looks more solid but has only two tones for its three faces. Darken one of these two faces and we get a stronger impression, as in No. 3. Perhaps most beginners would be satisfied with this arrangement, but on comparing

it with No. 4 we find a slightly darker tone on the lightest face gives it substance and without doubt shows a better idea of its solidity.

It should be remembered that only on the highest light on the print should the natural colour of the paper base be seen, and then only for a very small area.

If allowed to show through in a large area, or if scattered about the picture space it shows bad lighting or bad technique or perhaps both. The lower sketch shows how this lighting principle can be put into practice.

# Letters to the Editor

*The Editor is not responsible for the opinions of his correspondents.*

## EVEN ILLUMINATION IN ENLARGING.

SIR,—If you could kindly spare the space I would be very interested to know whether any other of your readers have experienced difficulty in obtaining even illumination of the bromide paper when using a vertical condenser enlarger with gas illuminant, and whether they have been able to effect a cure.

I find that I get a slightly brighter centre at  $f/4.5$ . By careful stopping down to about  $f/5$  I can usually get fairly even illumination, but if, for instance, I wish to correct verticals (admitted this should never be necessary) and stop down, even to  $f/8$ , I get a dark centre patch. To stop down further is impossible, the trouble becomes so serious. The lens is of first-class make and, in fact, I have tried two or three others of slightly varying focal length but also of good make, with similar results. If it was not for the brighter centre at  $f/4.5$  I would say that the dark patch was caused by a small "dead" centre of the inverted mantle. As I do not wish to employ a ground-glass diffuser, I would be grateful to any reader who can suggest a remedy. Are mantles obtainable without a "dead" centre which I could try? I have used both cheap and standard price varieties without effecting an improvement. —Yours, etc., W.

## HECTOGRAPH JELLY AND EASEL.

SIR,—Regarding enquiry by C. D. (Ealing) a more practical method of attaching bromide paper to the enlarging easel is that which has been suggested before, *viz.*, attach lengths of insulating or adhesive tape (say  $6 \times \frac{3}{4}$  in.) diagonally across the four corners of the easel. The bromide paper can be gently pressed against these strips and pulled away after exposure. —Yours, etc., T. A. M.

## MINIATURE AND OTHER MATTERS.

SIR,—The letters of several of your correspondents published in a recent issue of "The A.P." are of considerable interest, and with your permission I would like to comment upon them.

Mr. A. Nation states that in his opinion the miniature camera is but a passing craze. I think it must be obvious from his letter that he is not speaking from practical experience. Miniature cameras—miniature so far as size goes—have been with us for many years. Thirty years or so ago I owned a little camera of the shape of a watch. No one, however, would pretend that such small cameras were anything more than "stunts." They are not to be compared with the precision instruments of to-day. Any one who has handled such a camera, for example, as the Leica, cannot fail to be impressed, not only with the workmanship, which is superb, but with its advance in design and technique.

Mr. "S.-S.," in his letter, complains of the poor results which he has obtained from processing executed by D. & P. firms. It should be obvious that it is impracticable to expect D. & P. firms to make a good job of Leica films. But, fortunately, the remedy is simple—and inexpensive. Let him do his own processing. With a Correx tank he will be assured of technically perfect negatives—provided that his exposure is correct—and each negative can be entirely free from finger-marks and pinholes. I am not an expert, and claim to possess only ordinary intelligence. During my summer holidays I exposed 300 Leica negatives, and on my return, I developed them in a Correx tank, carefully following the maker's instructions. As a result, I have a collection of negatives which, without exception, are absolutely free from any imperfections.

If a man is not disposed to go to this trouble he should not buy a miniature camera. Such cameras emphatically are not intended for those who will not take the trouble to learn how to use them.

Mr. J. Atkinson complains of the price of developing tanks, and compares them with bakelite articles that can be bought for a few pence in a sixpenny bazaar. Surely this is entirely

beside the point. A well-designed developing tank is also a precision-made instrument. Referring to the Correx tank—I am entirely unconnected with the makers—the tools for this moulding must have been very costly. One might reasonably assume that the preliminary research and experimental work cost a great deal of money. In any case, surely the labourer is worthy of his hire. If Mr. Atkinson is able to develop films satisfactorily in a jampot all credit to him, but I prefer to make sure of getting satisfactory results.

Previous correspondents have referred to the high prices charged for these foreign precision-made miniature cameras. It is, of course, regrettable that there is no British equivalent. But let us be broadminded and admit that there are no British equivalents either because (a) we have not the experienced workpeople available to make them, or (b) that British camera manufacturers have insufficient confidence in the market. So far as I can see there can be no other reason.—Yours, etc., ERNEST R. GILBERT.

## LANTERN SLIDES BY THE CARBON PROCESS.

SIR,—Where large scale projection is contemplated an improvement in working may be effected by squeegeeing the tissue immediately after sensitising on to a ferrotype plate. When dry it will come away with a very smooth, glossy surface which will make perfect contact with the negative.—Yours, etc., P. E. ABRAHAM.

## A MINIATURE NEGATIVE TIP.

SIR,—I would like, through your valuable paper, to make the following suggestion to "miniature" workers. As soon as the film has been developed and dried, cut it up into strips of three exposures, and print on self-toning paper, six in a quarter-plate frame. It is not necessary to be particular about this, as they are not for show. I find these very useful when enlarging; besides, any remarks as to exposure, title of subject, etc., can be written on the back, thus being useful for future reference. Hoping this will be of interest.—Yours, etc., J. ARDEN.

## LENS DISCOLORATION.

SIR,—In the October 30th, or thereabouts, issue of *The Amateur Photographer* I notice a Reader's Question from A. J. (Eltham) regarding lens discoloration. He states that the front element of his lens shows a purplish colour, and that this discoloration cuts down the effective working aperture of the lens from  $f/4.5$  to about  $f/8$ .

From this description I would say that A. J. has a lens with a front element made up of two or more pieces of glass which are cemented together and that the cement between these units has gone bad for one of several reasons. The cure is to send the lens to a repair shop or to the manufacturers, and have the elements re-cemented. If the camera is a small hand outfit the cost should not be over a couple of dollars (American prices may be higher, but that is about what it would cost over here).

This deterioration of the cement is no indication that the lens is of inferior make or quality, but is usually the result of carelessness on the part of the owner. Usually it is the result of leaving the camera where the lens is exposed to the direct rays of the sun. A friend of mine who is a commercial photographer and carries cameras in a trunk on the back of his car has had several lenses go bad in the last few years from the vibration of the car. This chap, however, drives 30,000 to 40,000 miles per year, so the average amateur need not worry about this. I have carried a Graflex in my own car for probably 50,000 miles over all kinds of American roads, and so far my lens is perfectly all right.—Yours, etc., C. F. ROSS (Philadelphia).

[A large number of letters to the Editor have been held over owing to lack of space.—Ed.]

# THE "CONTAFLEX" 35-mm. TWIN-LENS REFLEX.

THE Zeiss Ikon "Contaflex" camera which has just arrived sets a new standard in miniature camera construction. It is the first camera to appear with a built-in photo-electric exposure meter, and possesses other novel features.

For focussing, the "Contaflex" can be employed in several ways. To use as a reflex the hood is raised in the usual manner. As the film is normal 35-mm. cine size, and the picture is  $1\frac{1}{2} \times 1$  in., the view would be rather small on the focussing screen. Therefore the finder lens is 8-cm. as compared with the 5-cm. normal taking lens, and these are geared together in a highly ingenious manner, so that although the finder image is twice as big as that on the film, the finder always shows exactly what will appear on the film.

The top of the hood is convex and silvered, and for self-portraits with the delayed action the photographer places himself so that he can see his reflection in this mirror, and the camera will take precisely what can be seen from that angle.

Alternatively for use as a direct-vision finder, one looks through an aperture at the back of the hood through the mirror, and the view is seen with absolute clarity just faintly tinged with a bluish tint. The focussing screen is ruled to show the images cast by lenses of other focal lengths, and, when used for direct vision, corresponding rules appear superimposed on the blue tint.

The built-in photo-electric exposure meter merits description. The flap bearing the word "Contaflex" that appears just above the finder lens is raised, exposing a series of prisms and, incidentally, acting as a sky shade. Beneath these prisms are three scales. The lowest scale is engraved with Scheiner or DIN emulsion speeds; the one above shows the stops. The arrow on this scale is set to the speed of film in use. To the left of the hood is a floating needle which, by moving with the forefinger a lever on the right of the camera, is set to a fixed pointer. The exposure is then automatically recorded against the stops.

The focal-plane shutter is made entirely of metal, and gives speeds from  $\frac{1}{2}$  to  $1/1,000$ th second. The delayed-action mechanism operates the shutter twelve seconds after setting. Setting the shutter also winds the film, so that it is impossible to give two exposures on the same film. Those who prefer plates can also use the "Contaflex" with which either films or plates may be used at will. The prices with 5-cm. taking lenses are: Zeiss Tessar  $f/2.8$ , £64 12s. 6d.; Zeiss Sonnar  $f/2$ , £71 17s. 6d.; and Zeiss Sonnar  $f/1.5$ , £87 2s. 6d. An ever-ready leather case costs £2 2s. extra.

Full particulars of this remarkable camera may be obtained from Messrs. Zeiss Ikon Ltd., of Mortimer House, Mortimer Street, London, W.1.

## THE NEW WESTON EXPOSURE METER.

THE pioneers of the photronic exposure meter, the Weston Electrical Instrument Corporation, have just introduced a new model which will appeal to all photographers.

This model, No. 650, incorporates an electric photronic cell which has a much greater sensitivity to low light values, thus enabling a reading to be taken for an exposure in very weak light, for both day and artificial light.

This extra sensitivity is due entirely to the construction of the cell and does

not rely upon any form of resistance. The cell is also designed to give only a narrow angle of view. The design of the meter follows closely to their previous models in that the meter registers the reflected light value of the subject in terms of units ranging from 0 to 1,000, which are used in conjunction with a single dial at the side of the meter.

To operate the meter, the emulsion speed of the negative material is first set on the metal dial. These speeds are Weston's own and are given for both daylight and artificial half-watt lighting for all the emulsions in use to-day. The photronic cell glass is then pointed to the subject to be photographed and the light value taken from the meter. The metal dial is then turned until the pointer is set opposite a number corresponding to the light value. In this position, the exposure time is read off opposite the  $f$  stop to be used.

The  $f$  stop scale embraces a range from  $f/1.5$  to  $f/32$ , and the exposure time scale from  $1/1,000$ th second to 100 seconds.

The Weston emulsion speeds on the meter range from 1 for low ratings such as infra-red plates, up to as high as 64, although the fastest film speed given in the booklet is 32, showing a generous allowance for future high-speed emulsions.

Another good feature is an indicator showing the latitude of under- and over-exposure possible with various subjects, illustrations of which are given in the very informative 50-page booklet issued with the meter.

It is remarkably compact and is handsomely finished in a black moulded case, measuring  $4 \times 2 \times 1$  in., fitted with lanyard. Price £5 19s. Leica model, £5 19s. Leather case, 10/- extra.

## Exhibitions and Competitions CURRENT AND FUTURE.

The Amateur Photographer Monthly Competitions for Beginners, Intermediate and Advanced Workers.—Entries, December 31. Rules in the issue of November 27.

Third (Second International) Wilmington Salon of Photography.—Open, January 6–26, 1936. Last day for entries, December 15, 1935. Particulars and entry forms from the Salon Committee, Delaware Camera Club, P.O. Box 818, Wilmington, Delaware, U.S.A.

Leicester P.S. International Exhibition.—Entries, January 24, 1936; open, February 24–March 7, 1936. Exhibition Secretary, H. Foscutt, 19, Doncaster Road, Leicester.

Preston Scientific Society.—Eleventh Annual Open Photographic Exhibition. Monday, February 3 to Saturday, February 15, 1936. Entries close, Friday, January 10, 1936. Particulars and entry forms from the Exhibition Secretary, F. Wells, 65, Powis Road, Ashton, Preston, Lancs.

Scottish National Salon.—February 8–29, 1936. Entries close, January 11. Particulars and entry forms from the Hon. Salon Secretary, Norman G. Brown, 36, North Lindsay Street, Dundee.

The 40th Annual Exhibition of the South London P.S.—Open, February 15–March 14, 1936. Entries close, January 21. Further details and entry forms from Hon. Exhibition Secretary, H. S. Adams, 40, Stockwell Park Road, London, S.W.9.

Iford Photographic Society.—Annual Photographic

Exhibition. From Monday, March 2 to Saturday, March 7, 1936. Closing date for entries, Saturday, February 1, 1936. Particulars and entry forms from E. G. Roughton, 63, Havering Road, Romford, Essex.

Edinburgh Photographic Society.—74th Annual Open Exhibition. Open, February 22–March 7, 1936. Entries close, February 3, 1936. Particulars and entry forms from the Hon. Exhibition Secretary, Geo. J. Kennedy, 16, Royal Terrace, Edinburgh.

Birmingham Photographic Society.—45th Annual Exhibition. Open, February 29–March 14, 1936. Entries close, February 8, 1936. Particulars and entry forms from the Hon. Secretary, Eric H. Bellamy, Waterloo House, 20, Waterloo Street, Birmingham, 2.

City of London and Cripplegate Photographic Society.—Thirty-first Annual Photographic Exhibition from March 16–21, 1936. Entries close, February 10, 1936. Particulars and entry forms from the Hon. Exhibition Secretary, A. C. Mundy, 11, Monkham Lane, Woodford Green, Essex.

London, Midland and Scottish (London) Photographic Society.—Eleventh Annual Exhibition of Pictorial Photography at Euston Station, London. Open, March 16–21, 1936. Particulars and entry forms from the Hon. Exhibition Secretary, Clarence Pursell, Chief Accountant's Office, L.M.S. Railway Co., Euston Station, London, N.W.1.

Ville Salon International D'Art Photographique de Bruxelles, 1936.—Open from March 21–April 5, 1936.

Entries close, February 25. Particulars and entry forms from M. M. Devaivre, 152, Rue Markelbach, at Brussels, 3, Belgium.

Hackney Photographic Society.—47th Annual Exhibition. Open, April 1–4, 1936. Entries close, March 10. Particulars and entry forms from the Hon. Secretary, Walter Selfe, 24, Pembury Road, Clapton, London, E.5.

Darwen Exhibition of Photography.—April 20–May 2, 1936. Entries close, March 19. Particulars and entry forms from the Secretary, J. H. Woods, South Down, Bolton Road, Darwen.

Bristol Photographic Society.—Second Annual Open Exhibition, from May 2–19, 1936. Entries close, March 28. Particulars and entry forms from the Hon. Exhibition Secretary, Percy V. Cave, 36, Coldharbour Road, Redland, Bristol, 6.

Sunday Referee Weekly Photographic Competition.—£10 offered every week for the best picture published. See Sunday Referee for full particulars.

Seventh Chicago International Salon of Photography.—Open, July 23–October 4, 1936. Entries close, June 15, 1936. Further details and entry forms from Alex. J. Krupp, Chicago Camera Club, 137, North Wabash Avenue, Chicago, Illinois, U.S.A.

I Internationale Kunstphotographische Ausstellung in Karlsbad.—Open from July 18–August 9, 1936. Entries close, June 18, 1936. Particulars and entry forms from Mr. Hugo Heyer, Schulgasse 26, Karlsbad.

# Amateur Cinematography

NEWS, NOTES AND MATTERS OF INTEREST FOR ALL CINEMATOGRAPHERS USING AMATEUR CINÉ APPARATUS.

## Save Your Dense Films By S.E.L.M.

Much film is wasted annually because the cinematographer does not yet realise the possibilities of "reduction." Not only rather dense films can be reduced to normal density, but shots which are black enough to lack proper definition may be made suitable for projection.

**P**ROVIDED the exposures have been properly processed, excessive density in projection films is due (in the negative-positive process) to over-exposure and (in reversal finishing) to under-exposure.

Most workers are, of course, aware that in the former process some measure of correction can be applied by examining the shots as they appear in the negative and allocating to each a particularly suitable exposure when making the positive; but not all know that an automatic and even more reliable method is employed in reversal practice to control the intensity of the light used in fogging the image prior to inversion.

This tends to bring about a general levelling of projection densities, and in this way a good many errors of exposure are corrected without the operator ever being aware of their existence.

However, these forms of correction are not yet available in all laboratories, and even where they are in use they are quite unable to correct gross errors. That is why dense films are still in existence, and why they are occasionally encountered in the work of practised experts as well as in that of less serious workers.

### Reduction Procedure.

Now, whilst the beginner or young worker is content either to destroy or to go on projecting his dense films in their original faulty state, the serious amateur gets to work with reducing agents and soon has his over-exposures bright and crisp and ready for perfect projection. Properly reduced "faults" are, indeed, indistinguishable on the screen from other shots that may themselves possess pristine excellence.

The correct procedure in reduction is to go over the entire reel and take out all shots that are found to be of heavier density than that which gives optimum screen results. Such results vary with different projectors and with different intensities of illumination, hence it is desirable always to examine films by projection through the instrument with which they are ultimately required for use.

Having taken out all shots that seem in need of reduction, the next step is to grade them in order of the degree of treatment necessary. Thus, some shots will be found so dense as to show hardly any detail in the image portion; others will show much detail but again will be

too dense for satisfactory projection; and others, to go to the lesser extreme, will differ but little from a properly exposed shot and will therefore require only slight treatment.

There are three very satisfactory methods of treatment available, and perhaps the best system is to place the affected shots into three groups to coincide with these available methods. Much latitude will still prevail in each group, however, for it is possible merely by controlling the strength of solutions and the time of immersion to make each deal with a wide range of faults.

### The Simple Hypo Method.

Films finished by the reversal process are especially suitable and susceptible to treatment by the plain hypo method—which is probably the simplest corrective method available. The bath

to be employed should consist of a "strong" solution, i.e., ten ounces of photographer's hypo to forty ounces of warm water, and should always be used fresh.

Short strips of films may conveniently be treated without special apparatus, but where it is desired to cement a number of such strips together and correct them all in one operation recourse may be had to a small winding frame, similar to that used in film development by the simple manual method.

It is important after reduction to wash all traces of hypo from the treated strips. Without taking the films from the winding frame, this may be done by immersing the whole in a bath or trough supplied with running water for forty minutes or so. If, at the end of this time, a little of the waste water fails to change the colour of a weak

The shopping centres of any large town are now presenting an animated appearance at the approach of Christmas. A topical action subject is available here for the amateur cinematographer. The above scene in Oxford Street can be filmed from the top of a bus.

solution of permanganate, the strips may be taken and dried.

Reduction by this method does not increase contrasts.

Where excessive density is more pronounced, a more active reducer is required. The safest of all the more active solutions—and one especially suitable for films finished in the negative-positive system—is the hypo-ferricyanide reducer. This may be made by taking a small quantity of freshly-made hypo solution, three ounces to the pint of water, and adding a strong solution of potassium ferricyanide drop by drop until the mixture becomes distinctly straw-coloured.

To commence reduction, the affected shots should be immersed for a few minutes in plain hypo solution and then transferred into the ferricyanide mixture.

Action is much more rapid here, and as a consequence it is necessary to examine the shots more frequently to mark progress.

It may be observed that this method of reduction makes for increased contrasts, but these can usually be sustained in these days of "pan." and "ortho-super" films. Where density is especially excessive, the film should be immersed in the bath for about four minutes, after which it should be transferred to a fresh bath for a similar time.

When sufficiently reduced, the film should be returned to the plain hypo bath for five minutes and washed as before.

#### The Persulphate Method.

Should an even greater degree of reduction be necessary, the persulphate

and sulphuric acid bath may with advantage be employed. This is made by dissolving one ounce of ammonium persulphate in one pint of water and then slowly adding about twenty drops of sulphuric acid.

It is necessary to soak the film thoroughly in water before the commencement of operations, and just before reduction appears to be complete the strip should be rinsed and immersed for a few minutes in a further bath made by dissolving an ounce of sodium sulphite in one pint of water. Washing for the usual time should follow, after which the film should be removed from the frame and suspended either in the air or, preferably, upon a large revolving drum until the reclaimed shots are dry enough to occupy their former place in the production concerned.

## New System for Ciné Clubs By M. A. LOVELL-BURGESS.

**A**LTHOUGH the ciné amateur does not nowadays put away his ciné camera with the coming of the winter months, it is a fact that ciné club work is mainly confined to the studio in winter-time. And the quality and scope of the work done in the studio depends mainly upon the policy of each individual club.

Most club secretaries are content to arrange projection evenings for the winter months, varied by occasional socials. If a film is actually being made by the club, certain evenings are set aside for filming, which means that some half a dozen people are required, and the remainder of the members are welcome to come and look on if they wish to do so.

A certain monotony of routine in ciné club arrangements is largely due to the fact that there is usually only one fairly large room available for all members, however different their amateur ciné experience or interests.

It would, I am convinced, be a useful experiment to introduce into the average ciné club something of the patrol system. Leaders could be appointed by the committee to direct groups in definite

practical work, such as scenario-writing, make-up, technical and experimental work, the principles of editing and cutting, and so on. Groups could be arranged according to the requirements of members; beginners, for instance, are much happier in the company of beginners, while those who have advanced almost to professional standards should have the stimulus and inspiration of those of equal experience.

It would be interesting to know how many ciné amateurs there are who regularly attend at ciné club studios and yet—for financial reasons—have no ciné equipment, or very little, of their own. What such people want, more than any amount of projection evenings, is actual practice under expert leaders, the latter being necessary not only for instruction but in the interests of the club's equipment.

It may seem childish for members to "break up" into groups, under leaders, and to occupy different parts of one room, but it would allow separate and necessary practical work to be carried out in a way that the general meeting does not.

The all-important object in club work should be to get members in the habit of doing things for themselves. If they are allowed to get into the way of just looking and listening, even those who have at home the latest equipment and the newest gadgets will become apathetic.

This group system would not mean cliques or coteries. New members, while sharing in the general activities of the club, could instantly be linked up with some particular interest, emphasis or aspect to which they could give practical expression. Many a ciné club loses a wealth of hidden talent because it has no means of finding it out.

Where there is plenty of scope for personal, practical work in a club there is also vitality, enthusiasm, and a strong sense of *esprit de corps*. The club has ceased to be an imitation cinema, and members are bound together by the fact that they are all—although in varying degrees—learners of the same engrossing hobby. The pooling of experience, the unity of purpose, and the spirit of emulation enriches not only each individual member, but also the club as a whole.

## ACTION SUBJECTS for the AMATEUR CINEMATOGRAPHER

The Amateur Photographer and Cinematographer's Diary of Forthcoming Events.

### FORTHCOMING EVENTS DURING DECEMBER, 1935.

DATE.	EVENT.	PLACE.	DATE.	EVENT.	PLACE.
Dec. 4-5.	Scottish National Fat Stock Club Show .. ..	Edinburgh.	Dec. 21.	Hibernians v. Queen of the South (Soccer) ..	Edinburgh.
" 7.	Ireland v. New Zealand (Rugby)	Dublin.	" 21.	Piping Competition (Scottish Pipers' Association) ..	Glasgow.
" 7.	Inter-City Rugby Match ..	Glasgow.	" 25.	Christmas Day—Old Customs	General.
" 7.	Ornithological Show .. ..	Newton Stewart.	" 26.	Boxing Day—Bank Holiday.	
" 9-13.	Smithfield Club Cattle Show ..	Royal Agricultural Hall.	" 26.	London Counties v. New Zealand (Rugby) .. ..	Twickenham.
" 9-	Christmas and New Year Carnival .. ..	Glasgow.	" 26-27.	Steeplechase Race Meeting ..	Cheltenham.
Jan. 25.	Yorkshire Fat Stock Show ..	York.	" 31.	Steeplechase Race Meeting ..	Kempton Park
Dec. 10-12.	Duke of York's Birthday.		Dates not yet fixed.	Oxford v. Cambridge (Rugby) ..	Twickenham.
" 14.	Wales v. New Zealand (Rugby)	Cardiff.		Relay Races .. ..	Oxford.

December 4th, 1935

# The Week's Meetings

*Societies will have their meetings announced here if the syllabus is sent to us at the beginning of the session or from time to time.*

## Wednesday, December 4th.

Bayswater and Paddington P.S. "Modern Aids to Indoor Portraiture." S. Schofield.  
Bethnal Green C.C. "Knapsack Tour in the Lake District." Slides by G. Herbert.  
Birkenhead P.A. "The Requirements of a Picture." H. Jones.  
Birmingham P.S. (Ciné). "Making Documentary Films." Matthew Nathan.  
Borough Polytechnic P.S. "Home-made Gadgets." C. Howard.  
Bradford P.S. "Development of Negatives." (Pictorial Group.) W. Womersley.  
Brighton and Hove C.C. "The Evolution of Photography." R. H. Lawton.  
Carlisle and County A.P.S. "Dark-room Dodges." G. C. Weston.  
Cheltenham A.P.S. "Developing Roll Films, Film Packs and Plates." T. B. S. Cox.  
Chorley P.S. Three Yorkshire Gems.  
Civil Service Ciné S. 16-mm. "Revolt of the Fishermen." M. Burke and A. Haune.  
Coventry P.C. Criticism Evening.  
Croydon C.C. "A Year with Nature." J. E. Roberts.  
Dennistoun A.P.A. G.D.U. Portfolio of Prints.  
Edinburgh P.S. "Leica Goes to Italy." Mrs. Ruth M. Raeburn.  
G.E. Mechanics' I.P.S. Exposure Meters.  
Ilford P.S. Visit to South Essex C.C.  
Kodak Works P.S. "Miniature Camera versus Stand Camera." P. T. Sampson.  
Manchester A.P.S. "The Beauty of Britain." J. D. Berwick.  
Northallerton and D.P. and C.S. "After-treatment of Negatives." R. P. Haw.  
Partick C.C. Whist Drive.  
Rotherham P.S. "Making the Exhibition Print." S. Bridgen.  
S. Suburban and Catford P.S. "Way Down Dorset." G. E. W. Herbert.  
Worcestershire C.C. "Photographic Adventures in Philosophy." J. W. Lawton.

## Thursday, December 5th.

Accrington C.C. "Flanders." J. Robinson.  
Armsley and Wortley P.S. Demonstration on Flashlight. T. Rigg.  
Ashton-under-Lyne P.S. Criticism of Exhibition Prints by F. G. Curson.  
Aston P.S. "A Sunshine Cruise on the *Oryntes*." W. Pedley.  
Bolton C.C. "Flight in Nature." J. A. Speed.  
Bromley (Kent) C.C. "Wind and Water." T. D. Nunn.  
Bury P.S. "Spring under Italian Skies." J. Dudley Johnston.  
Camberwell C.C. "A Naturalist on the Amazon." A. E. Robins.  
Cardiff C.C. "Enjoying Pictures" (Slides). D. Keighley Baxendale.  
Chelsea P.S. Lantern-Slide Making.  
Coatbridge P.A. "Toning of Prints." H. Peat (Johnson & Sons).  
Dennistoun A.P.A. Whist Drive.  
Greenock C.C. "Trimming and Mounting." James Wylie.  
Hammersmith H.H.P.S. "Sutherland." Arthur Gardner.  
Huddersfield N.P. and A.S. "Windmills." Ethert Brand.  
Hull P.S. "Plates and Films re Pictorial Photography." S. Bridgen.  
Keighley and D.P.A. Y.P.U. "The Hills and Dales of Derbyshire." S. Greenwood.  
Letchworth C.C. Colour Photography (Demonstration). N. J. Bowyer-Lowe.  
Liverpool A.P.A. "A Tour around the World." E. P. Thompson.  
Loughborough P.S. "A Britanny Trip." T. H. Simpson and G. A. Godrich.  
Manchester A.P.S. "Kirkcudbright." T. B. Howell.  
Newcastle and D.A.C.A. Projection of Four Films. Arthur D. Hobson.  
N. Middlesex P.S. Competitions: Members' Queries.  
Oldham P.S. "Rambles with a Kodak in Greece." Henry Riley.  
Singer C.C. Flower and Still-Life Photography by Flashlight.  
Sunderland P.A. Photo-micrography.  
Tynemouth P.S. "Light in Relation to Photography." Dr. G. R. East.  
Wimbledon C.C. "Engineering Photography." G. Marshall Smith.  
Woolwich P.S. Ciné Films and Lecturettes. One-Man Show: C. W. Verney.

## Friday, December 6th.

Bethnal Green C.C. "The Lens."  
Chelmsford P.S. Open Night.  
Colne C.C. Demonstration. A. T. Bailey.  
Desborough and D.P.S. Alliance Slides.  
Harrogate P.S. Members' Evening.  
John Ruskin C.C. Discussion Evening.  
King's Heath and D.P.S. Print Criticism—Genre.  
Leigh L.S.P.S. "Historic and Picturesque Lancashire." T. Burton.  
Leytonstone and Wanstead C.C. "From Hypo to Exhibition Print." J. H. Clark.  
Manchester A.P.S. "Southward Ho!" F. R. Newens.  
Photomicrographic S. "The Cinematography of Insects: Optical Benches." A. D. Newman.  
Royal P.S. "Some Thoughts of a Ten-Year-Old." Kenneth Baker.  
Southend-on-Sea and D.P.S. Lantern Lecturette Competition.  
Wimbledon Ciné Club. Films by Bognor Regis F.S.

## Saturday, December 7th.

Hammersmith H.H.P.S. "Processing Dufaycolor." V. H. Stott.  
Ilkeston Arts Club. Exhibition Closes.  
Manchester A.P.S. "Summer Days in the Outer Hebrides." G. B. Kearney.

## Sunday, December 8th.

Wisbech P.S. Ciné Display of 16-mm. in the Electric Theatre. F. Gough.

## Monday, December 9th.

Bexley Heath P.S. "Quips, Oddities and Ramblings." T. D. Nunn.  
Blackburn and D.C.C. "From Liverpool to Vancouver." (Ciné.) E. S. Maynard.  
Blackpool and Fylde P.S. Members' Practical Night. Work on Finishing a Print.  
Bolton C.C. Council Meeting.  
Bournemouth C.C. Carter Cup Competition for Outing Prints.

## Monday, December 9th (contd.).

Bournville C.C. Affiliation Lantern Slides.  
Bradford P.S. Slide Night.  
Chelsea P.S. "Free-Lance Photography." Miss L. Pascal.  
City of London and C.P.S. Informal Meeting. "Lantern Slides." Messrs. Wood and Coleman.  
Dewsbury P.S. "Improving Prints." G. W. Perkins.  
Erdington and D.P.S. Inter-club Visit of Lucas C.C. Prints and Slides Contest.  
Glasgow and W. of S.P.A. S.P.F. Portfolio.  
Ipswich and D.P.S. Members' Prints viewed through the Episcopes." Miss Symonds.  
Kidderminster and D.P.S. "Lantern Slides." P. G. Hopcroft.  
Kingston C.C. Debate: "Hand v. Miniature Cameras."  
Kodak Works P.S. "How to Make Enlargements" (Beginners). F. H. Viner.  
Lancaster P.S. L. and C.P.U. Prize Prints.  
Leeds C.C. "Common Birds and Insects." A. Gilpin.  
Luton and D.C.C. Reception of Exhibition Prints and Slides.  
Manchester P.S. "Down to Devon with Tent and Car." H. Kitchen.  
Newcastle (Staffs) and D.C.C. "Nature Notes." H. Watkin.  
Oldham E.P.S. "Lantern-Slide Making" (Illus.). T. Howel.  
Oxford P.S. "On the Cotswolds." A. H. Hutton.  
Sheffield and Hallamshire P.S. "Tone in Slides and Gaslight Prints." Shropshire P.S. Ciné Night.  
Southampton C.C. "Infra-Red Photography." (Ilford Ltd.)  
S. London P.S. "Retouching." Col. G. B. Barton.  
Southport P.S. "Colour Photography—Present Achievements." Basil Gray.  
Walsall P.S. "Mesopotamia: The Land of Two Rivers." C. J. Poole.  
Walthamstow and D.P.S. "Charcoal Black" Papers. G. H. Potts.  
Weymouth and D.P.S. "Agiacolor." (Agi.)  
York P.S. "The New Photography." J. Dudley Johnston.

## Tuesday, December 10th.

Ayr A.P.S. "Ciné Ventures." S. C. Taylor.  
Barnsley P.S. "The New Photography." J. Dudley Johnston.  
Beckenham P.S. "Artificial Lighting." S. Schofield.  
Bethnal Green C.C. Club Meeting: Discussion on Future Plans.  
Birmingham P.S. "Summer Outings." G. G. Heathcock.  
Blackpool and Fylde P.S. "Colour Filters." (Ilford.)  
Bridge of Allan and D.P.S. Criticism of Prints from Master Negative. J. Baird.  
Cambridge P.C. Annual Autumn Competition.  
Cardiff N.S.P.S. "Through the Suez Canal." (Ciné.) Miss M. Paterson.  
Doncaster C.C. "Roche Abbey: Life and Home of its Monks." Ethert Brand.  
Dunfermline P.A. Debate: "What Constitutes an Amateur Photographer?"  
Exeter C.C. "The Lake Country." A. V. Bibbings.  
Hackney P.S. Carbro. A. Miles.  
Halifax P.S. "A Talk on the Exhibition." H. Bairstow.  
Hamilton P.S. "Portraiture." I. W. Lightbody.  
Harrow C.C. Cinécraft Film Tinting. (Cinécraft Supplies).  
John Ruskin C.C. Chloro-Bromide Papers.  
Kilburn and Willesden P.S. "London Docks." Kenneth Baker.  
Leeds P.S. "How to Make a Lantern Slide." J. Manby.  
Leicester and Leics. P.S. Programme by the Ciné Group.  
Morecambe and Heysham and D.P.S. Criticism of Members' Prints. S. Bridgen.  
Nelson C.C. Members' Print Evening.  
Newcastle and Tyneside P.S. "Miniature Photography." J. H. Turner.  
Norwood C.C. "Negative Making. Before and After Treatment." R. S. Beck.  
Nottingham and Notts P.S. "Infra-Red Photography." (Ilford.)  
Ponteract P.S. Lecturettes (with lantern).  
Rotherham P.S. "The New Photography." J. Dudley Johnston.  
Royal P.S. "Beewick's Engravings." Burdus Redford.  
Rugby and D.P.S. "The Science and Art of Photography." IV.—The Negative.  
St. Bride P.S. "Landscapes." Alex. Keighley.  
Sheffield and Hallamshire P.S. "The New Photography." J. Dudley Johnston.  
Small Heath P.S. "The Gower." G. W. Bott.  
South Shields P.S. "Portraiture." H. E. Galloway.  
Stafford P.S. Members' Enlarging Night.  
Warrington P.S. Social Evening.  
Whitehall C.C. "Tales of Travel, Chapter VIII." Members.  
Wood Green P.S. "Bromoil." P. A. Harrison.

## Wednesday, December 11th.

Birmingham P.S. (Ciné Sec.). Films Taken on East Indian Cruise. J. C. Harris.  
Brighton and Hove C.C. "Radiography." Beresford L. Earle.  
Bristol P.S. Members' Exhibition of Folio Pictures.  
Chorley P.S. "A Chat on Pictorial Photography." Mrs. W. Madeley.  
Coventry P.C. "The Coast of Cornwall." Bernard Moore.  
Croydon C.C. "Photo-engraving, History and Methods." A. J. Bull.  
Darwen P.A. Practical Evening: Oil Reinforcement.  
Dennistoun A.P.A. Visit to *Daily Express* Office.  
G.E. Mechanics' I.P.S. Institute Prize Distribution.  
Ilford P.S. "Fesagol Products." L. A. Leigh.  
Kodak Works P.S. "Far-famed Golconda." Arthur Pereira.  
Loughborough P.S. Whist Drive.  
Northallerton and D.P. and C.S. Annual General Meeting.  
Partick C.C. G.D.U. Slides and S.P.F. Colour Slides.  
Phoenix C.C. G.D.U. Portfolio.  
Portsmouth C.C. and Ciné C. Concert and Social Evening (Rechabite Hall).  
Scarborough A.P.C. Ciné Show by Mr. Dixon.  
S. Suburban and C.P.S. Competition Evening.  
Stockport P.S. Criticism of Exhibition Prints and Slides. C. J. Unsworth.  
Worcestershire C.C. Whist Drive.

# Readers' Questions ANSWERED

**GENERAL.**—All communications for the Editor should be addressed: "The Editor, *The Amateur Photographer and Cinematographer*, Dorset House, Stamford Street, London, S.E.1," and in every case, without exception, must give the name and address of the writer.

**CONTRIBUTIONS.**—The Editor is glad to consider original, up-to-date manuscripts on photographic subjects. All contributions must be typewritten, or in very legible handwriting on one side of the paper only. Letters or communications arising out of matters already appearing in the paper are not paid for. The Editor disclaims legal responsibility for the safety of matter submitted to him, but he will endeavour to return rejected manuscripts, etc., when a stamped addressed envelope is enclosed. MSS. or prints that are not actually accompanied by a stamped wrapper or envelope can in no case be returned. Reproduction fees for prints are only paid by arrangement beforehand. The sending of a print, without any condition stated, will be taken as permission to reproduce it without fee.

**ENQUIRIES AND CRITICISM.**—Advice, Criticism and Information are freely given, but the following conditions should be read carefully before applying, as any communication which does not comply with the rules must be ignored.

(1) See "General" above. (2) Every question and every print for criticism must be sent separately through the post, and must be accompanied by a separate stamped addressed envelope. No exception can be made in any case to this rule, except so far as enquiries or prints from Overseas are concerned. (3) Neither enquiries nor prints for criticism must be enclosed with competition prints. (4) On the back of each print sent for criticism, in addition to the name and address of the sender, must be the title (if any), and the criticism coupon from the current issue. (5) Enquiries should be clearly written, on one side of the paper only, and should be specific and not general. Such enquiries as "How can I take interiors?" or "Can you give me some hints on outdoor portraiture?" are too general to be dealt with in this section. (6) All envelopes should be distinctly marked "Query" or "Criticism," as the case may be. (7) Prints are sent for advice or criticism on the distinct understanding that by so doing permission is given for their reproduction without fee. We endeavour to deal promptly with enquiries, but cannot undertake to answer by return of post, nor can we give precedence to any enquiry.

A selection of those replies is printed each week, but all questions are answered by post. Enquiries from abroad must contain a coupon also, but it need not be from the current number, and should be cut from the latest issue to reach the enquirer.

## Scum Marks.

Can you tell me the cause of the dark streaky marks on the enclosed negatives and how I can remove them? G. J. (Cirencester.)

The marks on your negatives are scum, either from the developer or washing water. Before putting the negatives up to dry they should be swabbed under water with a plug of cotton-wool to remove any such deposit. If the water in your district is "hard," a brief rinse and swabbing in water in which a few drops of hydrochloric acid has been added, will help to clean off the scum. We may mention, incidentally, that the negative is very much under-developed.

## Glazing Prints.

I have tried numerous methods of glazing some postcards I have, but without the same high finish that I see with commercial work. I enclose a typical print and I should appreciate your suggestions for improving my method. W. H. (Islington.)

It is just possible that the type of postcard you have will not give a very high gloss. The cause of the spots, however, is imprisoned air between the card and the glazing slab. It is more difficult to get rid of this in the case of thick papers. You should put the card down with plenty of water underneath it, and expel this with very hard pressure of a squeegee. With a little practice you will find that the air is carried out with the water.

## Pyro Stains.

Can you tell me the meaning of the expression, "Pyro quality"? Does the pyro developer give a large or small grain compared with the standard M.Q. developer? Can borax be added to a pyro developer formula? J. G. (Norton-on-Tees.)

Your question is difficult to answer. Unless a pyro-soda developer is very fresh and contains the necessary amount of sulphite the image is not a pure black, but has a slight yellowish tint, which is

often an advantage in printing and enlarging. The question of the effects of various developers on grain size is complicated and difficult, and there are considerable differences of opinion. Some experts claim that pyro will give as fine a grain as any other developer. We are not aware of any pyro formula that includes borax.

## Colour Process.

Can you tell me if the Uto colour process is still available, and if so, where I can obtain the necessary bleach-out paper? R. H. (Uppingham.)

The process to which you refer attracted some slight attention many years ago, but it had very little to recommend it, and was never used as a practical colour process. For one thing, it could only be used with a positive colour transparency, and the results were not permanent.

## Oxidising Developers.

Can you tell why stock solutions of M.Q. universal developer turn brown after a while? I carefully follow the maker's instructions, and use distilled water, but to no avail. J. B. (Oakham.)

Developers of the kind you mention are bound to oxidise through exposure to air. Up to a certain point this is quite harmless, and the developer will do its work quite well. At the same time, you should not make up too large a quantity at a time, and it should be kept in several small bottles full up to the cork rather than in one large bottle.

## Clearing Solutions.

Is it necessary to give negatives a final rinse in a weak citric or hydrochloric acid solution after washing? If so, how long should they remain in this bath? R. T. (Leigh-on-Sea.)

If you use the acid bath simply for clearing surface deposits from the film this should only take a minute or two, but the negative will certainly require further washing in several changes of

water. Either formalin or chrome alum will harden the film, but we much prefer the former. A 10 per cent solution does the work in a minute or two, and there is no need for further washing, as there would be in the case of alum.

## Paper Negatives.

Can you give some information regarding paper negatives, also for tank time and temperatures when using amidol as the developing agent?

T. D. (Newcastle.)

Most of the large paper manufacturers produce a paper specially devised for negative making. As a rule this is not exposed in the camera, but is used for making enlarged negatives from transparencies. There is no special difficulty in using it, and whichever make of paper you buy will be accompanied by the necessary instructions.

There is a good deal of variation in the composition of tank developers, whether for amidol or for any other reagent. We should advise you to get information on the question of tank development from such a book as the Burroughs Wellcome Diary, and you will learn that the factors to be taken into account are not only the composition of the developer and the temperature, but also the time required for different plates and films, and also according to the character of the negative required.

## Scottish Societies.

Can you please give me a few names and addresses of photographic clubs in the Glasgow neighbourhood? R. MacP. (Glasgow.)

Kinning Park Co-operative Camera Club, Mr. D. McLachlan, 21, Weir Street, Glasgow, C.5; Cowlares Co-operative Camera Club, Sec., W. L. Aitken, 12, Vulcan Street, Glasgow, N.; Dennistoun Amateur Photographic Association, Sec., David Phin, 290, Cumbernauld Road, Glasgow, E.1; Glasgow and West of Scotland Photographic Association, Sec., G. Hunter Martin, 114, West Campbell Street, Glasgow, C.2; Glasgow Y.M.C.A. Camera Club, Sec., D. Gilchrist, Jun., 201, Kent Road, Sandyford, Glasgow; Hamilton Photographic Society, Sec., J. B. Steel, 20, Burnblea Street, Hamilton; Partick Camera Club, Sec., Miss N. Graham, 51a, Peel Street, Partick; St. George Co-operative Society Camera Club, Sec., D. Macvarish, 1310, Argyle Street, Glasgow, C.2; South Glasgow Camera Club, Sec., J. L. Bannatyne, 7, Monreith Road, Newlands, Glasgow, S.3. The secretaries will be pleased to furnish you with full particulars, and we trust that from the above you will be able to find one that fulfils your requirements.

## Printing Masks for Enlarger.

What is the best way of making a mask that will give me clean white borders on my enlargements? G. K. (Glasgow.)

If we understand aright the sort of masks you require, the best plan is to cut them out of black paper, which is afterwards stuck down by the edges on to a sheet of glass, which is laid over the bromide paper when making the print, with the mask downwards.

# The Amateur's Emporium

## Business Notices

### Publishing

**OFFICES.**—Dorset House, Stamford Street, London, S.E.1. Telegrams: "Amaphot, Sedist, London." Telephone: Hop 3333 (50 lines).  
**PUBLISHING DATE.**—"The Amateur Photographer and Cinematographer" is on sale throughout the United Kingdom every Wednesday morning.  
**SUBSCRIPTION RATES.**—British Isles 17/4 per annum, Canada 17/4, other countries abroad 19/6 per annum, post free.  
**REMITTANCES.**—Cheques, etc., should be crossed and made payable to Iliffe and Sons Ltd. "The Amateur Photographer" can be obtained abroad from the following: **UNITED STATES:** The International News Co., New York. **FRANCE:** W. H. Smith & Son, 248, Rue Rivoli, Paris; Hachette et Cie, Rue Beaumour, Paris. **BELGIUM:** W. H. Smith & Son, 71-75, Boulevard Adolphe Max, Brussels. **AUSTRALIA:** Gordon & Gotch, Ltd., Melbourne (Victoria), Sydney (N.S.W.), Brisbane (Queensland), Adelaide (S.A.), Perth (W.A.), and Launceston (Tasmania). **NEW ZEALAND:** Gordon & Gotch, Ltd., Wellington, Auckland, Christchurch and Dunedin. **INDIA:** A. H. Wheeler & Co., Bombay, Allahabad and Calcutta. **CANADA:** Imperial News Co., Toronto, Winnipeg and Vancouver; Benjamin News Co., Montreal; Gordon & Gotch, Ltd., Toronto. **SOUTH AFRICA:** Central News Agency, Ltd.

### Displayed Advertisements

Communications on Advertisement matters should be addressed: The Advertisement Manager, "The Amateur Photographer and Cinematographer," Dorset House, Stamford Street, London, S.E.1. Copy for displayed advertisements for the issue of any particular week must reach Dorset House by the first post on Tuesday morning in the week previous. Rates and conditions will be sent upon application.

### Prepaid Advertisements

#### SALE AND EXCHANGE: AMATEURS ONLY—

12 words or less. . . . . 1/-

1d. for every additional word.

#### PROFESSIONAL AND TRADE:—

12 words or less. . . . . 2/6

2d. for every additional word.

Each paragraph is charged separately.

**SERIES DISCOUNTS** are allowed to Trade Advertisers as follows on orders for consecutive insertions, provided a contract is placed in advance, and in the absence of fresh instructions the entire "copy" is repeated from the previous issue: 13 consecutive insertions, 5%; 26 consecutive, 10%; 52 consecutive, 15%.

All advertisements inserted in these columns must be strictly prepaid and posted to arrive at the Head Office, Dorset House, Stamford Street, S.E.1, not later than first post FRIDAY for the following week's issue, or one day earlier at the Branch Offices, 19, Hertford Street, Coventry; Guildhall Buildings, Navigation Street, Birmingham, 2; 260, Deansgate, Manchester, 3; 26a, Renfield Street, Glasgow, C.2.

Advertisements are inserted, as far as possible, in the order received, and those received too late for one issue, or crowded out, are published in the first following in which there is space. The Proprietors retain the right to refuse or withdraw advertisements at their discretion.

Postal Orders sent in payment for Advertisements should be made payable to ILIFFE AND SONS LTD., and crossed

& Co.

Notes being untraceable if lost in transit, should not be sent as remittances.

The Proprietors are not responsible for clerical or printer's errors, although every care is taken to avoid mistakes.

**BOX NUMBERS.**—For the convenience of advertisers, letters may be addressed to numbers at the office of this paper. When this is desired, the sum of 6d. to defray the cost of registration and to cover postage on replies must be added to the advertisement charges, which must include the words: "Box 000, c/o 'The Amateur Photographer'." Replies should be addressed: "Box 000, c/o 'The Amateur Photographer,' Dorset House, Stamford Street, London, S.E.1," and these letters will be simply forwarded by us to the advertiser. It must be understood that we do not deal with the correspondence in any other way, nor accept any responsibility in connection with the advertisement. Readers who reply to Box No. advertisements are warned against sending remittances through the post except in registered envelopes. In all such cases the use of the "Deposit System" is recommended.

### Special Note

Readers who reply to advertisements and receive no answer to their enquiries are requested to regard the silence as an indication that the goods advertised have already been disposed of. Advertisers often receive so many enquiries that it is quite impossible to reply to each one by post. When sending remittances direct to an advertiser, stamp for return should also be included for use in the event of the application proving unsuccessful.

### Deposit System

Readers who hesitate to send money to advertisers in these columns may deal in perfect safety by availing themselves of our Deposit System. If the money be deposited with "The Amateur Photographer and Cinematographer," both parties are advised of its receipt. The time allowed for decision is three days, counting from receipt of goods, after which period, if buyer decides not to retain goods, they must be returned to sender. If a sale is effected, buyer instructs us to remit amount to seller, but if not, seller instructs us to return amount to depositor. Carriage is paid by the buyer, but in the event of no sale, and subject to there being no different arrangement between buyer and seller, each pays carriage one way. The seller takes the risk of loss or damage in transit, for which we take no responsibility. For all transactions up to £10 a deposit fee of 1/- is charged; on transactions over £10 and under £50 the fee is 2/6; over £50 and under £75, 5/-; over £75 and under £100, 7/6; and on all transactions over £100, one-half per cent. All deposit matters are dealt with at Dorset House, Stamford Street, London, S.E.1, and cheques and money orders should be made payable to Iliffe and Sons Ltd.

## CAMERAS AND LENSES

## WARNING

We have received many complaints from our readers in regard to the business methods of Mr. R. L. Green, trading as R. L. Green's Photographic Exchange, of 218, Fore Street, Edmonton, London, N.18, (or possibly with different initials) as Cine Photo Supplies, 4, Holborn Place, High Holborn, W.C.1.

For some considerable time we have refused to insert his advertisements in "The Amateur Photographer and Cinematographer," and from the complaints we have received it would appear that his practice is to communicate with private advertisers having goods for sale, offering to take such goods in exchange for others, or to purchase for cash. Readers are advised to ignore all such offers from this quarter.

## CAMERAS AND LENSES

# PERFECTION

## 750-WATT

### FAMOUS FEATURES

Direct Illumination.  
Patent Venturi Tube.  
Maximum Light.  
Synchromesh Gears.  
Dead silent.  
Rock steady.  
Centralised Controls.  
Turbine fan cooled.  
30 sec. Rewind.

16-mm. Ampro Super Bronze Projector, large super lens, 750-watt direct illumination, lamp built in patent venturi tube and capped (absolute maximum light must pass through condensers, the lamp is all built in, the light must go through condensers), booster reflector, unique flickerless shutter of new design (even at half speeds), synchromesh silent gears of dead silence, centralised controls on base (for one-hand operation), famous "kick-back" claws (new system, no wear on film sprocket holes at all), large turbine fan-cooled (lamphouse always cold), gear quick tilting head, ultra speed rewind (rewinds 400-ft. in 30 sec.), aero-finned lamphouse, and many other unique features. Thick bronze ripple finish.

FILMS, 9-mm., 16-mm., 35-mm.; Pathe 9-mm. Super Films in great variety available for exchange; 2/6 (plus 3d. postage) sent us with any Super Film you may desire to change will bring you a fresh subject from us. Send one or two and try this service, it will more clearly convince you that this is a worth-while service than writing to ask about it. Any film supplied by us in this service will be taken in exchange for a further 2/6 at any time when another film is required. When sending film give a selection of numbers to indicate your preference. All the old favourites and new novelties available; 8 for S, 8B for SB.

THIS list is merely representative, many other bargains are available; Projectors and Cameras from 21/- to £99. No catalogue is available of bargains far too numerous to list, therefore your inspection invited.

ILLUSTRA ENTERPRISES, 159, Wardour St., London, W.1 (Oxford St. end, facing Gaumont-British). Ger. 6889. 1-5-9, one address only. 1-5-9. Demonstrations daily. [1680]

# S.H. GRAVURE ENLARGING FRAME

Complete with 3 screens  
and 3 masks £2:2:0

The S.H. Gravure Enlarging Frame will give your photographs a unique distinctiveness so that they will cease to be "just photos."

Unlike all the methods which have been evolved in the past in an attempt to attain this objective, the S.H. Gravure Enlarging Frame does not necessitate the use of special paper, manipulative skill or the carrying out of tedious chemical processes, but it enables a variety of novel and extremely beautiful effects to be easily produced on ANY enlarging paper and with ANY vertical enlarger. By means of the special textured translucent screens—which are non-inflammable—photographs can be made to have the appearance of being beautifully etched, or given lovely "linen" or "tapestry" effects to make them definitely "out of the ordinary."

For 10x8, 8½x6½, and 6½x4½ in. enlargements.

## BOOKS about Photography with Miniature Cameras

**The Book of the Miniature Camera.** By George W. Hesse. A new book devoted to all types of miniature cameras and their use.

**The Miniature Negative—Its Development and Care.** By Augustus Wolfman. Deals exhaustively with the question of development of miniature negatives.

**Pictorial Photography with the Miniature Camera.** By Edwin C. Buxbaum, A.R.P.S. Shows how the miniature camera can be used for pictorial photography.

**Travel Photography with the Miniature Camera.** By Karl A. Barleben, Jun., F.R.P.S. Contains much information on selecting subjects for the miniature camera.

**Colour Photography with the Miniature Camera.** By Louis Marden. Gives the latest data available on colour photography, with special reference to the miniature camera.

**Portraiture with the Miniature Camera.** By George W. Hesse. Tells how the miniature camera can be used successfully for portraiture.

**Theory and Practice of Miniature Camera Photography.** By Jack Kellman. Mr. Kellman in this new book explains the "whys" and "wherefores" of such matters as film, exposure, filter factors, developing, etc. Easy to read and understand.

**Getting Ahead in Photography.** By H. Rosseter Snyder. Any one who has the slightest leaning towards amateur photography cannot read this book without becoming more enthusiastic about the hobby.

**Candid Photography with the Miniature Camera.** By Kip Ross. A well-known New York Press photographer tells how he obtains "personal" news pictures with a miniature camera.

**The Leica Data Book.** By Karl A. Barleben, Jun., F.R.P.S. Gives in a handy form a vast amount of information about the use of the Leica camera.

**Profitable Photography with the Miniature Camera.** By Edwin C. Buxbaum. Almost every amateur photographer is interested in turning his camera efforts into spare cash.

**"Profitable Photography with the Miniature Camera."** is written for the purpose of showing the many ways profit may be derived in taking miniature pictures.

**The Leica Manual.** Here is a book which represents the accumulated experiences of 22 specialists and pioneers in Leica photography.

No other book has ever attempted to cover the broad scope of Miniature Camera photography as thoroughly as the **Leica Manual**. 300 pages, 350 illustrations.

**SANDS HUNTER & CO., LTD.**

## A Rolleiflex Picture

Father Christmas speaking: "You'd never believe the number of Rolleiflexes I'm distributing this Christmas. Up and down the country, amateurs and experts, all asking for Rolleiflexes, and no wonder, such a marvel as it is! I've given a good many presents in my time, but never before one as fine as this. Well, here's wishing you a Merry Christmas—and a Rolleiflex!"

Brief specification: Automatic focussing hood; powerful focussing magnifier; parallax-compensated finder lens; fine quality ground-glass focussing screen shows picture full size, right way up; spirit level; 12 pictures on  $3\frac{1}{2} \times 2\frac{1}{2}$  roll film for 1/-; Stops and speeds adjusted while focussing, new Rapid Compur shutter 1 sec. to 1/500th, T. & B.; Automatic film counter, f/3.5 Zeiss Tessar lens. £25.

Grams: ZODELLARIA, WESDO, LONDON

**S**TILL a fortnight to run to Christmas Day, but—in case we have no further opportunity—let us wish the readers of *The Amateur Photographer* A MERRY CHRISTMAS and, if possible, a PHOTOGRAPHIC CHRISTMAS.

Christmas greetings—a little ahead—are sometimes remembered when they might be forgotten among the others one receives on Christmas Day.

WHAT A TIME CHRISTMAS IS! Just see the British public cheerfully spending its money on things to give. Things not only to give to other people, but to themselves. It may be an old "Borstalian" tie, socks of a vivid hue and pattern, or cigars which turn you green (not with envy). What does it matter! Here is the point: Why not give, even to yourself, something which is going to be a joy not only this Christmas, but for all the year?

Remember how last summer you tired of the camera you had used for several years, because of its bulk or because of its inefficiency.

Make up your mind to have a Christmas present or to give one which will give you everlasting joy—a Leica camera—or, for that matter, any of the other miniature cameras which are so closely likened to it, but do not forget to go to the specialists who know all about them, who know all about the service necessary; who give instructions both verbal and otherwise with every outfit and courtesy and consideration to every purchaser.

The firm which does all these things is Wallace Heaton, Ltd., the miniature camera specialists.

If you want something for the

## HOW TO SPEND THIS CHRISTMAS

winter only, make up your mind this year to have a real thrill, or to give a real thrill!

Do not give a separate present to each single member of your family, but tell them that you propose to give one present to everybody, including yourself, and what could be better than a Home Cinematograph? You never regret it—never tire of it. The enjoyment is as varied as the films you see every week at your local cinema, but you enjoy them in your own home.

A home cinematograph can be purchased to-day at any price from two guineas to £200 and the Wallace Heaton shops have them all. They have no bias for any particular make and for that reason the advice given really is advice.

We invite you to write to us and tell us how much you wish to spend, whether you have any preference for the baby film or prefer the sub-standard size, or even the large size as used in the picture houses. Ask us as many questions as you like. We shall be only too pleased to write you in full and send all particulars.

Our experience is unequalled anywhere. We have been selling home ciné and talkie apparatus since its inception and what we do not

know about it is not worth knowing.

Call if you can; if you are up in London for the day, or if you live there, there are three of our principal shops in the West End where you get the very highest quality goods at exactly the same price as if you bought them in the provinces or in the suburbs.

Post and call enquiries can come to 119, New Bond Street, our head office, but we have two other shops, at 47, Berkeley Street, W.1, next door to Thomas Cook's, and at 43, Kensington High Street, London, W.8, near John Barker's. At all these shops there is a model theatre where you can have films from our libraries demonstrated and, do not forget, that not only can you show the films that you have taken yourself, but we can lend you films from these libraries which will last you for every week during the year.

By the way, we nearly forgot to mention that any apparatus you have will be taken in part payment with very generous exchange allowances, and this applies to all classes of cameras and ciné apparatus, and for those who would like to have a camera or home cinematograph at once, but pay for it over a lengthy period, our deferred payment plan meets the case with fact and consideration.

If you would like us to send you lists of anything, please do not fail to write. These include new and second-hand apparatus, photographic accessories, ciné apparatus, ciné libraries, etc., and binoculars.

Wallace Heaton, Ltd., are definitely the house for goods of quality at keenest prices, with the best possible service.

[ADVT.]

# CHRISTMAS CHEER

## IF IT'S NEW—WE HAVE IT

### 'CONTAFLX'

The first real twin-lens miniature reflex camera taking perforated cine film, and the first with built-in photo-electric exposure meter. Focusing screen shows picture twice the size recorded on negative. With interchangeable Zeiss lenses. Picture size 24x36 mm. See it now at City Sale.

With Zeiss Tessar f/2.8 2-in. lens

**£64 : 12 : 6**

Nine monthly payments  
[of £7 10s. 10d.]

### FILMO '8' PROJECTOR

Traditional Bell-Howell quality in the 8-mm. field. Has 400-watt lamp. Filmo '8' is entirely gear-driven, there being no belts whatever, inside or out. Fitted with fast f/1.6 projection lens. # SQUADRONS

of the  
*Royal Air Force*

*A beautifully Illustrated Record of the work of the R.A.F. in peace and war!*

In this book the Squadrons of the Royal Air Force are for the first time dealt with as living entities. The personnel of distinguished service units, their record, the machines they use, and modern aircraft are fully described. Cadet routine at Cranwell and training of apprentices at Halton are explained in detail.

140 pages lavishly illustrated with more than a hundred exclusive photographs—fifteen as full-page pictures in photogravure.

Bound in stiff cloth boards and with attractive jacket in photogravure. Size 12½×8½ in.

PRICE 7/6 net; by post 8/-

From leading Booksellers or direct from the Offices of "FLIGHT"

# Zeiss Ikon Cameras for Christmas

## A SELECTION OF MODELS FITTED WITH RAPID LENSES SUITABLE FOR INDOOR AND OUTDOOR WORK ALL THE YEAR ROUND

### CONTAX

The supreme universal camera for 24×36 mm. perforated ciné film. Has metal focal-plane shutter giving exposures from  $\frac{1}{2}$  to a real  $\frac{1}{1,000}$ th second and Time. Long-base patent rotating wedge distance meter ensures unequalled focussing accuracy and robustness. apertures from f/1.5 to f/8.

Choice of interchangeable Zeiss lenses, apertures from f/1.5 to f/8. Detachable back, easy to clean and load.

PRICES: Zeiss Tessar f/3.5 .. ..	£31 0 0
Zeiss Tessar f/2.8 .. ..	£33 15 0
Zeiss Sonnar f/2 .. ..	£41 0 0
Zeiss Sonnar f/1.5 .. ..	£56 5 0

### SUPER NETTEL

The ideal miniature camera for 24×36 mm. perforated ciné film for those miniaturists who do not require the facility of interchangeable lenses provided with the Contax. Distance

meter coupled to lens focussing, metal focal-plane shutter, provides exposures from  $\frac{1}{5}$ th to a real  $\frac{1}{1,000}$ th second and Time. Detachable back, easy to clean and load. The most moderately priced of precision instruments.

PRICES: Zeiss Triotar f/3.5 .. ..	£18 12 6
Zeiss Tessar f/3.5 .. ..	£22 5 0
Zeiss Tessar f/2.8 .. ..	£24 15 0

### SUPER IKONTA

Takes the usual standard roll films. Distance meter coupled to lens focussing. Compur Rapid shutter to  $\frac{1}{500}$ th with smallest size,  $\frac{1}{400}$ th second in other sizes. Special model No. 530/16, illustrated, for 11

pictures on usual  $2\frac{1}{4} \times 3\frac{1}{4}$  roll film, is fitted with Zeiss Tessar f/3.5 or f/2.8—the latter is the fastest lens fitted to a roll-film camera of this size.

PRICES: $2\frac{1}{4} \times 1\frac{1}{4}$ , 16 pictures, Zeiss Tessar f/3.5 ..	£18 12 6
$3\frac{1}{4} \times 2\frac{1}{4}$ , 8 pictures, or 16 divided, Zeiss Tessar f/3.8 .. ..	£22 10 0
$4\frac{1}{4} \times 2\frac{1}{4}$ , ditto, Zeiss Tessar f/4.5 .. ..	£20 17 6
$2\frac{1}{4} \times 2\frac{1}{4}$ , 11 pictures on $3\frac{1}{4} \times 2\frac{1}{4}$ spool, Zeiss Tessar f/3.5 .. ..	£25 5 0
$2\frac{1}{4} \times 2\frac{1}{4}$ , ditto, Zeiss Tessar f/2.8 .. ..	£28 5 0

### NETTAR

Everybody's ever-ready roll-film camera for 8 exposures  $3\frac{1}{4} \times 2\frac{1}{4}$ . The Zeiss Ikon "two-point" setting of focus and stop makes possible sharp pictures without special focussing by simply adjusting focus and diaphragm to respective dots.

PRICE: Nettar f/3.5 and Compur Rapid shutter to  $\frac{1}{400}$ th sec. ... .. £9 10 0

Other models also available with choice of shutters and lenses.

### IKOFLEX

A beautifully-made twin-lens reflex camera for 12 exposures  $2\frac{1}{4} \times 2\frac{1}{4}$  on the usual  $3\frac{1}{4} \times 2\frac{1}{4}$  roll-film spool. The image is seen in the ground-glass screen the right way up and in its actual size. Special condensing lens makes image in the ground glass bright even at the corners of the picture. Into the hood—self-erecting—is fitted a magnifier for focussing needle-sharp pictures.

PRICES: Novar f/4.5 as optical equipment.

Dervall shutter to $\frac{1}{100}$ th sec. .. ..	£7 15 0
Klio shutter to $\frac{1}{175}$ th sec. .. ..	£8 10 0
Compur Rapid shutter to $\frac{1}{500}$ th sec. .. ..	£10 2 6

### IKONTA

A fine self-opening roll-film camera. Choice of a variety of optical equipment and features the Zeiss Ikon "two-point" setting of focus and stop to simplify matters for the snapshotter. Self-erecting front, compact design, beautiful finish and first-class equipment. Four sizes.

PRICES, with Compur shutter.

For 16 pictures $1\frac{1}{8} \times 1\frac{1}{4}$ on usual V.P. spool, Zeiss Tessar f/3.5 ..	£9 7 6
Ditto, Novar f/3.5 .. ..	£7 15 0
16 pictures $2\frac{1}{4} \times 1\frac{1}{4}$ on $3\frac{1}{4} \times 2\frac{1}{4}$ spool, Zeiss Tessar f/3.5 ..	£10 15 0
Ditto, Novar f/3.5 .. ..	£7 17 6
8 pictures $3\frac{1}{4} \times 2\frac{1}{4}$ , or 16 divided, Zeiss Tessar f/3.8 .. ..	£15 12 6
8 pictures $4\frac{1}{4} \times 2\frac{1}{4}$ , or 16 divided, Zeiss Tessar f/4.5 .. ..	£13 0 0

Illustrated descriptive folder free. Our complete 80-page catalogue free for postage 3d, in stamps. Most high-class camera dealer stock. Zeiss Ikon apparatus, name of nearest dealer on request.

THE ENTHUSIAST.

# Christmas and the CAMERA

The Christmas holidays offer many opportunities for the amateur photographer, and in spite of the fact that most people find the time too short to include all that they want to do, it is safe to say that photography should not be forgotten. The camera can be used to provide a great deal of pleasure and entertainment during the festive season.

CHRISTMAS is the time for family reunions and parties, and there is no better opportunity for taking individual portraits or groups of the whole family.

Thanks to recent advances in apparatus, lighting and sensitive materials, these groups need not be the painfully formal affairs that they were not so very long ago, when it was necessary to ask the sitters to face the camera in some uncomfortable spot out of doors "while the light was good."

The photographer who decides to use his camera during the Christmas holidays of 1935 can take snapshots with much the same ease and facility as was the case out of doors during the past summer.

Nor is this advance confined to the user of de luxe equipment, with lenses working at the aperture of  $f/2$ . Modern high-speed plates and films, and one or two electric bulbs of the "overrun" type, permit fully exposed negatives with an exposure of  $1/25$ th of a second at  $f/6.3$ .

Those who are in search of novelties may try the effect of high-speed "finishing" at a Christmas party. The plate or film, after exposure, is developed, fixed and washed, the latter being confined to rapid rinsing to remove only the surface hypo. The negative is then dried by placing it in a bath of methylated spirit for two minutes, followed by another fresh bath of

spirit for one minute. By waving it in front of a fire it will dry in a minute or two. The print is made, fixed for two or three minutes, washed for another three, and dried by a fire. This can be done at a safe distance. It is easy for the finished print to be produced within fifteen minutes of starting development. This performance generally arouses intense interest, particularly on the part of guests with no knowledge of photography.

If the photographer seeks novelty of a different type, a portrait or group may be taken, and after development, fixing and a brief washing, the negative is held close to a lighted candle or other heat source, so that the film will start melting and running upon its base.

The result, when printed, will cause considerable amusement.

A novelty that has proved successful with a party of young people is to show how a photograph is produced. A group is taken by flashlight, then the room darkened, or another apartment used for a demonstration.

The plate is desensitised, and keeping well away from the light, it is developed by candlelight. Youngsters find interest and amusement in watching the picture "come out" in the developer. Fixing and washing follow.

The plate is dried and the party dismissed before the novelty wears off. Later on, when the plate is dry, they are called together again and a few gaslight prints made.

This will serve not only to show how simple photography can be, but by exciting interest may start many new photographic enthusiasts.

A "warm" welcome.

# The Photographer's Christmas Presents

The problem of the Christmas present should

not be so difficult for the amateur photographer as it is for the general public. In his hobby alone sufficient material occurs to provide practically all his presents. In the following article the best methods of applying this advantage are described.

THE amateur photographer who has many friends also interested in the camera is fortunate in the matter of present-giving at this time of year. Material to suit every purse is available, but at the same time he will have to pause and consider what type of person the recipient is before he selects his presents. This is most satisfactorily settled by dividing his friends into groups, and devising presents to suit each group.

## For the Advanced Worker.

Even the advanced worker will usually welcome some new piece of apparatus, and the wealthier donors would do well to consider the gift of a miniature camera of the latest type, which is always a useful adjunct to the more serious type of camera which one associates with the advanced worker. Or, if a miniature camera be already in his possession, an enlarger to suit it would gladden the heart of any recipient.

In some cases, however, it may happen that these gifts are too expensive, and so more modest ones will have to be found in the shape of the latest developing tanks, which are remarkably serviceable, and need not be scorned by workers who have hitherto done their developing by inspection.

As an aid to indoor work, photo-flood lamps would be sure of a welcome in any photographer's collection of accessories. Of course, a reflector should be supplied with these, and there are some very good reflector sets to be obtained on the market at prices from 17s. 6d. upwards.

## The General Worker.

The ordinary amateur will, however, be much easier to satisfy, since almost any piece of unusual apparatus will almost certainly delight him. Many workers have to be content with a minimum of apparatus, and hope to acquire more advanced utensils as the time goes on.

A second camera is a delight to many workers, and care should be taken to ascertain what type of instrument will afford the most variety of work from the one already in the prospective recipient's possession.

But it is in general apparatus that the giver will find more selection. Filters, for instance, greatly add to the worker's scope, and sets can be obtained varying in price from a few shillings to several pounds.

Dark-room accessories will keep the donor in lasting remembrance to the general worker. A good lamp, for example, or a dark-room clock; either, or both, would facilitate work in the dark-room, and so give added pleasure to photographic work.

Storage albums might be an incentive to the worker to take care in storing his negatives. There are many types on the market, and perhaps the most useful are those of the looseleaf pattern in which the negative is stored in a numbered transparent envelope, so that it can not only be indexed but can also be recognised without removal from its protecting envelope.

Flash-bulbs will open a new sphere of activity to the photographer who has never tried artificial-light work, and outfits are very efficient now.

## The Novice.

The novice will require many things in the material line, quite apart from cameras, enlargers and developing tanks, which would all prove very serviceable and acceptable to him. For instance, bromide paper comes expensive when you are liable to spoil a number of sheets, and he would doubtless welcome a few packets of this valuable printing medium. Plates or films would also prove very acceptable, giving him, as the gift would, more opportunities for exposures, and therefore greater possibilities of success.

Chemicals would certainly present him with an opportunity of making up simple everyday formulæ, care being taken that only those chemicals are supplied which are in general use, and not lesser known ones which are only used by advanced or experimental workers.

The difficulty of judging distances is ever present with us in these days of large-aperture lenses, and a good range-finder would prove a blessing to almost any worker, with, of course,

the exception of those having one incorporated in their cameras.

No novice would refuse a photo-electric exposure meter as a gift, and probably many ordinary workers would appreciate such an instrument.

Tripods, with adjustable tops, extend the worker's sphere very considerably, especially if he be interested in photographing small objects which necessitate the swinging of the camera. These are very reasonable in price, and if the price of the complete outfit is too high, the adjustable head can be purchased and presented to the worker who already possesses a tripod.

Little need be said of print-trimmers, retouching knives, spotting brushes, squeegees, graduates, and the myriad things so dear to the real photographer's heart. A small collection of these accessories would prove invaluable as a present.

## The Non-Photographer.

Even if his friends be non-photographers, the amateur has still a collection of interesting and personal gifts he can present to them.

Calendars, particularly if they contain a photograph of mutual interest, are almost bound to please their recipient, and serve to remind him of the donor for the whole of the year. They can be produced with ease, and have the extra advantage of being the photographer's own work.

Passe-partout makes it possible to present one's friends with intimate or picturesque scenes tastefully framed, and provided with a strut or hanger.

Neat, modern frames for holding pictures are also advertised, and with an appropriate photograph would make an acceptable gift. Incidentally, it is a very effective plan to single out your friend from some group in a negative, and to enlarge just him or her into an unconventional portrait.

For the book-loving friend no better gift can be suggested than the current issue of *Photograms of the Year*, which is both a fine record of the best photographs of the year, and a beautiful book of pictures.

Further, to help in the choice of photographic presents, the following pages will provide endless suggestions.

# HERE are PRESENTS!

For the benefit of our readers we give on this and the following three pages some suggestions for photographic Christmas presents. In each case the item marked with an asterisk is the one illustrated. Further particulars and catalogue of other seasonable goods will be sent free on application to the firms indicated. Their full addresses will be found on reference to our advertisement pages.

## Actina, Ltd.

Those who wish to present an up-to-date miniature camera should see the "Dollina,"\* which takes 36 exposures 24×36 mm. on standard ciné

film, tubular built-in optical view-finder, Schneider f/2.9 in Compur Rapid shutter, and costs £9 5s. Other suitable lines are the "Certo Super-Sport" Camera, taking 12 or 16 pictures on 8-exposure 3½×2½ film, costing £10 10s., with Meyer Trioplan f/2.9 in Compur shutter, and the "Certos" Enlarger, for miniature negatives up to 4×4 cm. This latter costs, with f/4.5 anastigmat, £9 9s.

## Agfa Photo Ltd.

Two cameras and two projectors are worthy gifts obtainable from this well-known house. The "Speedex O"

2½×1½ Roll Film Camera, with f/3.9 Agfa Solinar anastigmat in Compur shutter, costs £5 5s.; while the "Speedex Compur" Camera, for 3½×2½ roll films, with f/4.5 Agfa Apotar anastigmat in delayed-action Compur shutter, costs £6 6s. The projectors are both for 16-mm. films.

The "rich uncle" model is the "Movector Super 16," costing £75.

## Automatic Coil Winder and Electrical Equipment Co., Ltd.

The "Avo"\* Photo-electric Exposure Meter would provide a gift appreciated by every photographer, whether amateur or professional, "still" or ciné worker. It is the first British-made meter of this type and is fully calibrated in f/ numbers and H. and D. speeds. Once the scale is set to the plate or film in use, it requires no further adjustments or calculations, and the needle indicates the correct exposure. The price is 57s. 6d.

## Burroughs Wellcome & Co.

The 1936 edition of the "Wellcome" Photographic Exposure Calculator, Handbook and Diary\* is now available, and should be found in every photographer's Christmas stocking. The contents of the Diary have been thoroughly revised, the Exposure and Development

Factor Tables having been brought right up to date. The value of the widely used "Wellcome" Exposure Calculator has been enhanced this year by re-designing the calculator disc to accommodate the new plates and films of higher speeds. The price in the United Kingdom is 1s. 6d.

## The Camera Co.

The "Vauxhall" Super Reels,\* made of finest aluminium, would make a topical gift to all ciné enthusiasts. They are made both for 9.5-mm. and 16-mm. films, and are sold in sets of three, 9.5-mm. size costs 5s. 9d., and 16-mm. 6s. 9d., both post free. Humidor cases for these reels can be supplied at 3s. 6d. for three in either size, also postfree. "Vauxhall"

Silver Screens, 30×40, on wooden rollers, cost 11s. 6d.; and the "Vauxhall de Luxe" Silver Screen, on rollers with stretchers, is obtainable at 21s., size 52×40; and 15s. 6d., size 30×40. Carriage on screens is 1s. 3d.

## Aldis Brothers.

Any new introduction by this famous house would be of general interest, but when it is of so revolutionary a nature as the Aldis Epidiascope it becomes doubly interesting. This instrument can take large objects for projection, has

15-in. elevating table, and a rustless steel pointer with ball-and-socket joint is incorporated. Fourteen optically silvered reflectors surround the source and collect all the light, and the whole weighs only 54½ lb. The episcopic Aldis projection anastigmat of 18½-in. focal length is 5 in. in diameter. Diascopic projection is by wide-aperture Aldis lantern projection lens, and the cost, including lamp, is £42.

## Dollond & Aitchison, Ltd.

Those in search of a gift sure to be appreciated and certain not to be duplicated, need only purchase the Dollond Spectacle-Form Theatre Glasses. These

are worn like ordinary spectacles, but are instead extremely good opera glasses, so that the hands

are free during the entire performance. The cost is only 45s. Dollond's Prismatic Binoculars are well known for excellence. The "Standard"\* 8×32 wide-angle high-illumination glass costs £7 10s., and the "Standard de Luxe" Lightweight, £9 15s.

## Carl Zeiss (London), Ltd.

The fame of Zeiss prismatic binoculars is so world-wide that the gift of one of these would create a joyous time. The Telex 6×24 is obtainable

for £11. The ×2½ Galilean Opera Glass costs £4. A most useful and acceptable gift would be the Zeiss Table Barometer.\* Unlike ordinary instruments, this barometer has a semi-circular scale, so that the hand rises as the glass rises

# CHRISTMAS— THE Opportunity for Indoor Pictures!

The Christmas festivities will provide some exceptional opportunities for indoor pictures. See that you are prepared. The inexpensive Ensign home lighting equipment described here makes it perfectly simple to take *real* pictures with complete success.

## ENSIGN MULTIFLOOD

**Brilliant Light just where you want it**

Gives a mighty flood of light in any direction. 12-in. reflector with adjustable head—hangs on picture rail, stands on floor, or anywhere.

Complete with 6-ft. flex, plug and universal head stand (without lamp).....6/-

Osram Photoflood lamp, any voltage, 2/6

*The Ensign Multiflood can be turned in any direction and will hang or stand anywhere.*

## ENSIGN PHOTO FLASH-BULB OUTFITS

**Simple and Efficient**

Operated from an ordinary torch battery, these outfits ensure instantaneous pictures without smoke, dust or noise. Can be used anywhere.

No. 0. Outfit, with 2 small Philips Photoflux bulbs, Silverlite folding reflector, torch battery and test bulb... 5/6

No. 1 Outfit. As above, but two large bulbs and Multiray metal reflector... 12/6

## ENSIGN PHOTO-SPOT

**For Dramatic Effects**

A Portable Spotlight. Essential for really dramatic effects. Packs into a small space.

No. 2 Outfit, with base and spotting attachment, as illustrated (without lamps).....£1 17 6

Osram Photoflood lamp, any voltage, 2/6

ENSIGN, Limited, LONDON, W.C.1

## ENSIGN SYNCHROFLASH

**For Genuine Indoor Snapshots**

Easily fitted to the camera—and easily removed. Shutter and flash are operated **simultaneously**, simply by pressing the release. For flash-bulbs or flashpowder. Models for all types of shutter.....Prices from 10/6

(8 models in all).

# LEICA

**E. LEITZ** 20 MORTIMER ST. **LONDON W.1**

PARTICULARS FROM ALL "GOOD-GLASS PHOTOGRAPHIC DEALERS

PLEASE MENTION "THE AMATEUR PHOTOGRAPHER" WHEN CORRESPONDING WITH ADVERTISERS.

and vice versa. At £3 3s., with the super-excellent finish of all Zeiss products, this is an inexpensive as well as an attractive present. The "Tellup," which really combines three instruments in one—a vest-pocket telescope  $\times 2\frac{1}{2}$ , a telescopic magnifier  $\times 2\frac{1}{2}$ , and a six-power magnifying glass, and costs only 27s. 6d.—is a cheaper but equally well made article.

#### J. H. Dallmeyer, Ltd.

The "Adon" Adjustable Telephoto Lens, giving focal lengths from  $12\frac{1}{2}$  in. to  $44\frac{1}{2}$  in., according to camera extension, and covering any size plate from  $2\frac{1}{4} \times 1\frac{1}{8}$ , costs £7, and would be a gift well worth receiving. The "New Large Adon," a fixed-separation tele lens working at f/4.5, costs £9.

Cheaper gifts can be made from the Dallmeyer Colour Filter

range, and cost from 10s. each. Reflex Magnifiers would be welcomed by owners of reflex cameras, the cost, in case, being 15s. Dallmeyer "Snapshot" Cameras, in four models for film packs or roll films, cost £3 3s. upwards, and the "Speed" Cameras, with f/2.9 Pentac anastigmat, cost £18 18s. in V.P. size, and £25 in  $3\frac{1}{2} \times 2\frac{1}{2}$  size. "Victor" Ciné Cameras are another suggestion. There are several models.

#### Drem Products, Ltd.

A scientific novelty of real use to those who make enlargements is the "Largodrem." This is connected to the same electric circuit as that serving the enlarger.

After the negative is focussed, the "Largodrem" is placed on the easel so that a characteristic part of the negative falls on the test window, and then automatically indicates the requisite exposure. At 30s. this

would make an inexpensive and acceptable gift. The "Largodrem Tester," for ascertaining the speed of bromide papers, is a cheap and handy accessory, the price being 3s. 6d. Other suggestions are Drem Bromoil Outfits, at 10s. and 15s., and the "Justophot" Extinction-type Exposure Meter at 35s.

#### Ensign, Ltd.

What can one select as Christmas gifts from a catalogue of 224 pages? To do

anything like justice, everything contained in the catalogue should be mentioned, which obviously is impossible. We can only dip at random into this fascinating tome, and mention what

we find. First there is the "Ensign Midget" Camera\* that has won friends everywhere since its introduction. This is priced at 22s., 33s. 55s., and

65s., and whatever model be chosen will afford joy to the recipient. Another dip shows the "Double-8," which takes 16 pictures  $3 \times 4$  cm. on V.P. film, and costs only 72s. 6d. with f/4.5 anastigmat. The Ensign "Speed Film" Reflex,  $3\frac{1}{4} \times 2\frac{1}{4}$ , costs, with f/4.5 lens, £6 17s. 6d.; the 16-mm. "Ensign Simplex Pockette" Ciné Camera, £20; a Retouching Desk, 12s. 6d.; Albums from 1s. 6d. to 22s. 6d.; Optiscope Projection Lantern, £7 15s. Here is an idea—why not give an Ensign Amateur Drying Press, suitable for any voltage, at 18s. 6d.?

#### Garner & Jones, Ltd.

There are many desirable gifts obtainable from this house. Perhaps the best

known is the "New Exakta," a real reflex for roll films, with focal-plane shutter with speeds from  $1/25$ th to  $1/1,000$ th sec., coupled to the film wind, so that double exposures are impossible. Lenses from f/3.5 to f/1.9 are available. Prices are from £15. The "New Multi-speed Exakta," with speeds from  $1/1,000$ th sec. to 12 sec., costs from £19 10s. The "Exakta" Enlarger,\* for V.P. negatives, costs £4 10s., and will

prove a most acceptable gift for those with cameras of this size. Another very attractive line is the Plaubel  $3\frac{1}{4} \times 2\frac{1}{4}$  Camera, which is an exquisitely designed piece of apparatus and costs £39 10s. with f/2.9 lens.

#### Gevaert, Ltd.

With the popularity of ciné work, a highly suitable gift suggestion is some Gevaert Ciné Film, which is obtainable in all sub-standard sizes, and would give immense satisfaction to the recipient. As the prices do not include processing, the donor is enabled to present films without imposing restrictions on the donee, a point much in favour by skilled ciné workers. Specimen prices are, for 16-mm. 100-ft. Ortho. reversal, 13s. 6d., or

Panchro. super reversal, 19s.; Ortho. negative, 12s. 6d. 9.5-mm. Ortho. reversal, 30 ft. 2s. 7d., 50 ft. 4s. 6d., 100 ft. 9s.; Panchro. super reversal, 3s. 3d., 5s. 6d. and 11s. 8-mm. Ortho. reversal, 4s. 6d.; Panchro. super reversal, 6s. Another suggestion is some "Gevaluxe" Paper, which is particularly suitable for enlargements.

#### Edwin Gorse.

The new "Egofix" 16-mm. Super Talkie Projector at £65 would, naturally, be an acceptable present. Unfortunately, uncles as rich as that are too, too seldom found. The common or garden uncle can, however, furnish the "Egofix" Walking-stick Unipod, which extends to eye-level or any shorter distance, is finished in black and chromium, with removable chromium knob top, and costs 25s.

#### R. F. Hunter Ltd.

The "Rolleiflex" Twin-lens Reflex Camera, is, of course, the *pièce de résistance* offered by Messrs. R. F. Hunter Ltd. The  $6 \times 6$  cm. model, with f/3.5 Zeiss Tessar anastigmat, costs £25. The smaller model, taking a picture

$4 \times 4$  cm., costs £24 5s. with similar lens, and £26 with f/2.8 Zeiss Tessar. A cheaper form of a similar camera is offered in the "Rolleicord," these being fitted with Zeiss Triotar anastigmats. That with f/4.5 lens costs £11 15s., and the one with f/3.8 £14. The "Celfix" Automatically-erected Ciné Screen would make a much appreciated gift.

It can be supplied either with silver or with crystal-bead surfaces, the prices respectively for  $27 \times 20$  size being £3 10s. and £4 10s. An interesting and inexpensive gift would be the Hunter Ciné Film Magnifier. This magnifies 7 diameters, and can be focussed for any sight. It costs 12s. 6d.

#### Ilford Ltd.

A gift that will make immediate appeal is the new Ilford Photo-electric Exposure Meter.\* This is specially suitable for indicating the correct exposure of Dufaycolor natural-colour films, and as these are being used in wider circles every day, this meter will prove most acceptable. It is, of course, also for use with every other type of plate and film, and costs £3 3s. The "Selo Lighting Set," costing 17s. 6d., is an inexpensive gift that would be welcomed by every amateur. Other suitable gifts for all pockets are a set of three meters, 3s. 6d.; Ilford Manual of Photography, 2s., and Ilford Amateur Handbook, 1s.

A really brilliant suggestion (brilliant in every sense!) is to give some spools of Dufaycolor films and so introduce colour photography into every home.

### Harbutt's Plasticine, Ltd.

Christmas is the very time for the famous "Plasticine." Not only will it help to keep the Christmas decorations in any desired position, but it will be found to have a hundred photographic uses. Messrs. Harbutt's have compiled a leaflet for which application should certainly be made. Anyhow, those who wish to please either a photographer or the youngster should purchase some "Plasticine" this month.

### Illustra Enterprises.

A 16-mm. Projector at under £5 is an achievement, and will enable a very fine gift at a reasonable price. This projector\* has hand drive, but is mains or battery illuminated. Stills can be shown by a special declutching device. The whole is well made and will prove most acceptable, the cost for either model being 99s.

### Johnson & Sons, Ltd.

The "Home Photography Outfit" is the line offered by these famous chemical manufacturers that will make a special appeal as a most suitable gift, the cost being 8s. 6d. Everything the beginner requires for the development of films or plates and making prints is contained therein, even to the printing-frame and measuring-glass, and one could not suggest a more suitable or acceptable present to an amateur.

### Kodak, Ltd.

Probably 75 per cent of amateurs started their photographic career with a Kodak camera, and of these more than

half as the result of a Kodak present at Christmas. Space will not permit the inclusion of all this great pioneer company's range. They have, however, some special Gift Sets. These comprise camera, canvas or leather case, and film, and the prices that follow are for these complete Christmas Gift Sets,\* all packed in a handsome presentation box. Baby Brownie, 7s.; Six-20

Brownie Junior, 12s.; or Super Model, 20s.; Six-20 Brownie, 25s.; Six-20 Kodak Junior, with doublet lens, 43s. 6d., or with Twindar R.R. lens, 55s. 6d., or with f/6.3 anastigmat lens, 65s. 6d. The same camera with better shutter equipment can be obtained. With f/6.3 anastigmat in O.V. 4-speed shutter, it costs £4 3s., and with f/4.5 anastigmat in O.P.S. 4-speed shutter, £5 15s. 6d.

### E. Leitz (London).

The famous Leica camera would make the gift *par excellence*, Model IIIA\*, costing £43 when fitted with f/2 Summar lens and with chromium finish, or £34

with f/3.5 Elmar lens. Some new and highly acceptable accessories that would be received with delight by owners of Leica cameras are available. A Wide-angle f/6.3 Hektor Lens costs £10 14s., and the Thambar f/2.2 9-cm. Soft Focus Lens with controllable diffusion is purchasable for £22. The Rapid Winding Attachment, enabling 3 exposures to be made in 2 seconds costs £3 7s. 6d., while the Remote Release and Winding Attachment, which controls the camera for a series of shots from a distant point, is priced at £3 19s. The Summar Lens Hood is obtainable for 11s. 6d., and the Orange Filter and Single Exposure Frame cost 4s. 6d. each.

### R. G. Lewis.

This firm of specialists in miniature cameras has now introduced a new Enlarger for miniature negatives that would make a most acceptable gift to owners of Leica, Contax, Rolleiflex and similar cameras. This enlarger is called the "Vertex," and is of the semi-condenser type. The model for Leica and Contax owners takes the lens from the camera and enlarges to 7 diameters, the price being £6 6s. The other model\* takes 4.5×6 cm. and 6×6 cm. negatives, enlarging them respectively to 15×12 and 15×15. The price, complete with f/4.5 anastigmat and orange swing cap, is £8 8s.

### L. A. Leigh & Co.

The famous "Fesagol" Developers, that have the extraordinary property of compensating for errors in exposure,

are available in special Christmas gift packings. "Fesagol N" costs 9s. 4d. for a package that will make 350 oz., enough to provide trouble-free bromide prints or enlargements to any amateur for a twelve-month. Truly a welcome and useful gift. "Fesagol R," which is a special rapid-working variety, costs 15s. 4d. for the same quantity, or 8s. 6d. for 180 oz. Those who wish to make a gift to a photographer may send a message or Christmas card to this firm, and they will despatch such message or card with the order, so as to show the source of the gift.

### W. H. McKaig.

The old and tried favourite, the "Bee" Exposure Meter\* at 5s., will always prove acceptable, or for those with the new wide-aperture lenses and ultra-rapid emulsions, 7s., including the new calculator. Other meters are the Colour Plate and Indoor at 5s. each, and the Small Ciné at 7s. 6d.

### Miscellaneous Trading Co., Ltd.

Excellent and inexpensive gifts can be found amongst the Microscopes offered by this house. For 3s. 6d. one can obtain a small ×20 "Pencil" Microscope. The model illustrated has circular stage, inclinable joint and sliding tube focus, the price being 9s. 6d., and magnification ×50. For 29s. 6d. a model with triple nosepiece and three objectives, ×25, ×50 and ×100, complete in polished wood case containing a set of dissecting instruments and hand lens, can be obtained.

### Norse Trading Co. (London), Ltd.

Two interesting cameras, each costing £4 5s., are available from this firm. They are the "New Baldi," taking 16 3/4 × 4 cm. pictures on V.P. film, and the "Baldax," which takes 16 exposures on 3 1/4 × 2 1/4 roll film. Each camera is fitted with f/4.5 Vidanar anastigmat in Vario shutter. Other suitable gifts can be chosen from the range of developing tanks. The "Superplex,"\* costing 45s., develops all makes of roll films from V.P. size to 4 1/4 × 2 1/4. The "Perplex" is for 12-exposure Leica films and roll films to 4 1/4 × 2 1/4, and the "Perkino" develops 5-f. lengths of Leica and Contax films. They each cost 25s.

### Modern Traders, Ltd.

The "Matélux" Lamp,\* that provides a light of 12,000 candle-power, and costs only 1½d. per hour, is a gift that would cause great pleasure. It enables snapshots to be taken indoors at night, and will provide many opportunities, especially at the Christmas Party, for satisfactory pictures. The cost complete is 42s.

### Presenta, Ltd.

Possessors of 9.5-mm. ciné cameras would welcome as a Christmas gift the "Presenta" Pocket Ciné.\* It can be carried in a vest pocket and used for showing films in any place. Thus, those who own this instrument are able to let the friends whom they meet see their latest films. Its more serious use is for editing; films may be run through and stopped exactly when desired. The price complete is 25s.

### Peeling & Van Neck, Ltd.

The "Foth-Derby" \* 3 x 4 cm. Camera at £5 5s. will make an appreciated gift. It takes 16 pictures on V.P. roll film, has f/3.5 Foth anastigmat in delayed-action focal-plane shutter, special tubular view-finder, and weighs 13 oz. For another £2 it can be supplied with f/2.5 lens. The "Foth-Flex" is a twin-lens reflex taking twelve 2½ x 2½ exposures on 3½ x 2½ film, has two f/3.5 lenses,

and delayed-action focal-plane shutter, and costs £10 7s. 6d. A highly desirable gift is the "V.N. Mechanical Head" Ciné Tripod. This head is a precision instrument of exquisite finish. Fitted

complete to a special tripod, it costs £7 17s. 6d.—a most well worth while purchase.

### Sands Hunter & Co., Ltd.

The new "Prinsen" Photo-electric Exposure Meter\* would prove very welcome. Its small size can be gauged by the illustration, and the meter is suitable either for still photography or for ciné work. The only adjustment required

is that of the H. & D. speed to the plate or film, thereafter the readings being automatic. It is made in moulded red bakelite and the price is £3 3s.

### Schering, Ltd.

There are many acceptable gifts to be found amongst the Voigtlander cameras. The "Superb" 2½ x 2½ Twin-Lens Reflex with f/3.5 anastigmats and Compur shutter costs £17. The "Brilliant," also a 2½ x 2½ twin-lens reflex, is obtainable with different lenses and shutters, and costs from £2 5s. to

£6 15s. The "Bessa" \* Camera is also available in various styles. The one we illustrate is the f/7.7 model at 52s. 6d., the arrow indicating the trigger release fitted on the baseboard.

### The Service Co. (London), Ltd.

Some very good presents are obtainable from this well-known house. The "Service Gem" Camera, which has a body constructed of unbreakable bakelite with fine-grain black finish, takes 16 pictures on 3½ x 2½ roll film. The lens is f/2.9 Steinheil Cassar anastigmat in delayed-action Compur shutter, and at £6 15s., is really remarkably good value. To ciné owners, the "Collapse" Ciné Screen,\* with silver surface, would prove most acceptable. The size is 30 x 24 in., struts and springs ensure flatness, and the cost is only £1.

### Taylor, Taylor & Hobson, Ltd.

To those already possessing cameras, a very acceptable present would be a Cooke Wide-angle Lens.\* These are designed for focusing at the large aperture of f/6.5, and then are stopped down. Excellent definition is given at f/16, while at f/32 they cover an angle of 100°. To cover 5½ x 3½ or 7 x 5, the cost is £8, rising to £14, which latter covers 14 x 11.

### Weston Electrical Instrument Co., Ltd.

The new Model 650\* Weston Photo-electric Exposure Meter would be appreciated by everybody. Despite the excellence of previous models, this new introduction has increased the sensitivity by over three times, thus enabling the new meter to record exposures for indoor photography as well as outdoors. It has easy reading scale and simplified exposure dial and costs £5 19s.

### Zeiss Ikon Ltd.

The number of gifts that one could select from the current catalogue of this famous house would run into hundreds, so space will only permit of mention of a few. Probably the most famous and popular is the "Contax" \* Camera,

which costs £31 upwards. Owners of Contax cameras would welcome a gift of one of the supplementary lenses, or a colour filter. The new "Super Nettel," costing £18 12s. 6d., with Zeiss Triotar f/3.5 anastigmat, will appeal. Like the "Contax," it takes 36 exposures on ciné film, has focal-plane shutter 1/5th to 1/1,000th sec., has range-finder coupled to focussing mechanism, and the film is wound by setting the shutter. It is wonderful value for money, and an exquisitely made scientific instrument. Readers would be well advised to send for the catalogue and see for themselves the great range of models and prices.

The method of making this card is described on this page by G. J. Jones.

# PHOTOGRAPHIC *Christmas Cards*

CHRISTMAS is almost here, and the enthusiastic amateur would do well to start planning to make a photographic Christmas card to send to his friends. Undoubtedly, four-fifths of the cards bought in a last-minute rush eventually find their way into the wastepaper basket, but those which the photographer has made, provided they are artistic, technically attractive, and bear the obvious personal stamp, are saved from such a fate. The first and most important problem is the selection of a suitable photograph; a card, be it ever so perfect technically, is of little value if it carries with it an inappropriate or haphazardly selected print.

Roughly, there are two types which can be used to make good Christmas cards; the personal, and the seasonal. A third possible variety is one which represents some outstanding characteristic of the photographer, his hobby, perhaps, or the particular sport which he enjoys.

The usual method of making a photographic Christmas card is merely to mount the selected print on a suitable piece of mounting card or folder and add the necessary greeting and signature. This calls for little more than careful trimming, and choosing the right print and words.

To go farther into this matter in the making of a personal greeting card, the most inexpensive production into which photography enters, is probably the following, for all the extra materials necessary (assuming that the amateur photographer already possesses the materials required for ordinary gaslight printing) are a piece of thin tracing-paper about the same size as the printing paper usually used, and a small bottle of indian ink (cost about 7d.).

With a brush or pen draw a suitable design, sketch or lettering in indian ink upon the paper. Ordinary ink is not opaque enough and should not be used.

The seasonable greeting is then added, being written in copperplate style, printed,

or in one's own handwriting, as preferred. When dry, the paper negative thus produced should be carefully trimmed to fit into the printing frame, sketch side downwards, and the desired number of gaslight prints made from it in the ordinary way. The exposure should, perhaps, be prolonged slightly in order to get a good brilliant black-and-white effect.

Any number of prints can be made in this manner. A still more original greeting card can, with a little more trouble, be made as follows; write neatly the words "A Merry Christmas From" (or something similar) on the tracing-paper as before and draw a circle about one inch or more in diameter in the bottom right-hand corner. Fill this in with ink so that it is quite opaque, then cut a mask out of black paper exactly the same size as the tracing-paper negative, and with a circular hole in it in precisely the same position as the opaque disc. Now expose a piece of gaslight paper under the paper negative, then remove the latter and insert the paper mask with the hole in the position previously occupied by the opaque disc on the paper negative. Now place over the hole a suitable negative depicting the person from whom the greeting is to be sent (an ordinary snapshot negative serves the purpose excellently), then expose the same piece of printing paper. When developed the print should bear both the greeting and a picture of its sender. Greeting prints made by either of these methods should always be pasted on to a neat card, or preferably on to the front of a folded sheet of notepaper.

Here is another scheme which is both simple and effective, and quite flexible.

It was sent by a reader from Canada.

A piece of thin white cardboard was obtained, about 12 in. by 18 in. long. On it was painted, with indian ink, a suitable and appropriate greeting. The name of the sender was written on a strip of white paper and pasted on to the cardboard in a suitable position below the greeting.

The cardboard was then leaned against a plain wall, with a toy dog partly supporting it, on a table, and the whole ensemble photographed. An ordinary folding Kodak was used, with a portrait attachment. The camera was stopped down to f/8, and the exposure was 30 seconds in the light of one 60-watt lamp placed four feet behind the camera.

As soon as the picture was made, the strip of paper containing the name was peeled off. This was easy because it had not

A Christmas Card from Canada, by J. Allan Cash.

# GET YOUR CHRISTMAS GIFTS—AT "THE WESTMINSTER" YOU CANNOT DO BETTER

## THE NEW SUPER IKONTA

Takes 11 pictures  $2\frac{1}{2} \times 2\frac{1}{2}$  on standard  $3\frac{1}{2} \times 2\frac{1}{2}$  roll films.

Body of hard aluminium alloy, with hinged back, leather covered, leather bellows. Weighs only 19 oz.

Special device to avoid double exposures, latest pattern distance meter coupled to lens focussing, f/2.8 Zeiss Tessar anastigmat, Rapid Compur shutter, speeds 1 to 1/400th sec., T. £28:5:0 and B. ....

Nine monthly payments of 65/11.

## The VICTORIA (Improved Model.)

The ideal camera for Autumn photography.

f/2.9 Schneider Radionar anastigmat, delayed-action Compur shutter, speeds 1 to 1/250th sec., T. and B. £6:15:0

Nine monthly payments of 15/9.

18 pictures  $2\frac{1}{2} \times 1\frac{1}{2}$  on standard  $2\frac{1}{2} \times 3\frac{1}{2}$  roll film.

Ditto, Rapid Compur, 1 to 1/400th sec., T. and B. £7:19:6

Nine monthly payments of 18/7.

Body of camera is moulded from practically indestructible plastic material, the surface being attractively finished. Leather bellows are fitted and the metal parts of camera are plated.

## THE ENSIGN MIDGET

### Magnaprint Enlarger

f/6.3 Ennar enlarging lens, specially designed condenser for enlargements up to 15x12 in., chart giving various sizes. Will also take half-V.P.K., Leica, or other small negatives. Complete with electric fitting. Less lamp. £4:10:0

Also supplied to take the standard Leica lenses £4:10:0

Nine monthly payments of 10/7.

## THE CONTA FLEX

The ONLY Camera with built-in Photo-Electric Exposure Meter.

Takes 36 pictures  $1 \times \frac{1}{4}$  in. on standard 35-mm. film. Metal focal-plane shutter, speeds  $\frac{1}{2}$  to 1/1,000th sec. and Time, arranged very conveniently in four groups, with built-in delayed-action release. The shutter and film-winding mechanism are coupled together, as with the more familiar Contax. All-metal folding focussing hood, complete with magnifier. The front and back of the finder hood form an Albada finder when using camera at the eye-level. Quick-action interchangeable lens mount taking lenses from 2 to 58 in. focal lengths, fitted with  $3\frac{1}{4}$  in. f/2.8 finder lens. Special condenser type focussing screen, which gives a very bright image, even at the corners.

### PRICES:

f/2.8 Zeiss Tessar anastigmat.... £64:12:6  
Nine monthly payments of 150/10.  
f/2 Zeiss Sonnar anastigmat..... £71:17:6  
Nine monthly payments of 167/9.  
f/1.5 Zeiss Sonnar..... £87:2:6  
Nine monthly payments of 203/4.

Write for leaflet, post free on request.

extra.

**BRIEF DETAILS.**  
The entire apparatus is contained in two cases, finished polished walnut. Takes both silent and sound films; runs at 16 or 24 frames per second. A special 12-armed Maltese cross movement permits the use of a large diameter intermittent sprocket. Slipping and jumping are eliminated. The opening of the projector door automatically switches on a pilot light to ensure easy threading. Standard type valves in amplifier.  
Centralised lubrication. Demonstrations Daily.

**37/6**

## FAMOUS DUAL, PURPOSE COMBINED CINÉ CAMERA AND PROJECTOR

At almost half maker's price!

This amazing instrument both takes and projects your own movie pictures. It uses standard Pathé 9.5-mm. films obtainable everywhere. Lens is by Dallmeyer—world-famous maker, and ensures critically sharp pictures. Smooth running double-claw movement. Works direct off a single 7½-volt dry battery, giving brilliant white illumination. In place of the battery a transformer can be used with A.C. mains. Price 5/6. Leather carrying-case, 5/-.

Maker's present list price 42s.

## THE "DEKKO" 9.5-mm. HAND-DRIVEN PROJECTOR

Note these advantages.

- 1—Exceptional balance, silence and long life, due to the introduction of spiral gears and bronze bearings.
- 2—Cast-iron base. The resistance is housed in this base, suitable for voltages from 110 to 230.
- 3—Aluminium lamp-house, designed to dissipate heat.
- 4—Increased illumination, invaluable for dark and under-exposed films.
- 5—New type of shutter between the lamp and film to eliminate burning and bucking of the film.
- 6—Simplicity of threading and rewinding.

Complete with Lamp, Resistance and Carrying Case.

**£3:10:0**

Super reel attachment 15/- extra.

GAMAGES, HOLBORN, LONDON, E.C.1 Telephone: HOLborn 8484

had time to dry. Then another name, of another member of the family, was pasted on and a second picture was made. This could be repeated until each member of even a large family had his own individual greeting card negative. If thin white paper is used, the edges of it do not show on the negative. Contact prints were then made from these negatives and pasted on to plain cards, such as can be obtained at any stationers.

The photographic Christmas card reproduced on this page was made by a still more elaborate but very effective method. The two children in silhouette were photographed in front of a sheet hung over a wire stretched across a room. A photo-flood lamp was placed behind the screen to light it, and the children were posed close in front of the screen. All other lights in the room were then switched off and an exposure of  $1/25$ th sec. at  $f/8$  was given on a panchromatic film. An ordinary film would, however, serve equally well. The negative was developed with M.Q. developer for double the usual time to obtain strong black-and-white contrast.

The bunch of mistletoe (bought at the sixpenny stores) was pinned on to a board covered with a sheet of white blotting-paper and photographed with a quarter-plate stand camera to get a fairly large image. The exposure was 4 sec. at  $f/8$  on pan. film. The negative was developed with M.Q. developer for the usual normal time.

A piece of white cardboard about 10 in. by 9 in. was then procured and the outside border drawn on this with faint pencil lines, the space between the lines being filled in with grey water-colour (poster colours are the most suitable). The enlargements from the two negatives were now made on glossy bromide paper to the correct scale to fit between the top and bottom lines.

When finished, the enlargements were cut out, the top one to a circular shape and the bottom one close round the figures; they were then pasted on in their correct positions with Grip-fix. The grey circular lines were then drawn in with compass and ruling pen, using the same colour as for the border. The lettering was put in last of all.

When finished, a copy negative to the required size was made in the usual manner, and from this the final cards printed on any "double-weight" paper to suit the taste of the producer, cream crayon bromide or chloride being most effective.

*A Christmas Card by K. Reitz.*

## Brown, Green, Blue and Red Tones on Bromide Prints

WHILE the utility of colour toning methods for producing blue, green and red on bromide prints is restricted in ordinary work, the opportunity now occurs for making adequate use of them. In the preparation of photographic Christmas cards, a task that is occupying the attention of so many amateurs at the present time, one or more colours in the print will add considerably to its attractiveness.

All the processes that are mentioned here start with a bleached bromide print followed by the sulphide bath.

The following is the procedure: The bromide print, after developing, fixing and washing in the usual manner, is bleached in:

Ammonium bromide .. 100 grs.  
Potassium ferricyanide .. 300 grs.  
Water to make .. 20 oz.

When fully bleached, rinse in water and apply the sulphide bath. This

produces a rich brown colour after a minute's immersion.

Make a stock solution of pure white sodium sulphide, 4 oz. in 20 oz. of water. The toning bath consists of:

Sulphide stock solution .. 3 oz.  
Water to make .. 20 oz.

To produce bright red tones the well-washed sulphide-toned print is placed in a gold toning bath:

Ammonium sulphocyanide 30 grs.  
Chloride of gold .. 2 grs.  
Water .. 4 oz.

The toning can be arrested at any point until the final complete red image is secured.

For green tones make up the following:

A. Potassium ferricyanide 15 grs.  
Sulphuric acid (con.) .. 30 min.  
Water .. 20 oz.  
B. Ferric ammonia citrate 15 grs.  
Sulphuric acid (con.) .. 30 min.  
Water .. 20 oz.

For use take equal parts of A and B, and immerse the well-washed sulphide-toned print. In this bath the brown colour changes to a pleasant green.

For blue tones the toning process with the above solution is continued. The green tones at first secured gradually change to blue. When a full blue tone is reached the print should be washed and dried. This process intensifies the image, so it will be necessary to start with a print fully developed but on the light side.

It will be seen from the above that, with a little care and the use of a brush to apply the solutions, a suitable subject can be multi-toned on a single print with a full range of colours, including variations of brown, red, green and blue to suit different parts. In addition, certain parts can, after bleaching, be redeveloped with an ordinary amidol or M.Q. developer, thus giving patches of black where required.

December 11th, 1935

# SHADOW

By on the

BERNARD ALFIERI, Jun.

*The Haunted Mill.*

**T**HERE is considerable satisfaction in pulling the blinds on a cold winter evening, and enjoying the fun of planning and photographing shadow pictures on the table top. These will not only

offer a wide scope for the imagination, but prove of artistic value if done with due attention to lighting and composition.

If made in good time they will provide attractive and unusual alternatives for Christmas cards.

All that is needed to produce them is a sheet of tracing-paper or other semi-transparent material, stretched over a frame, and a few pieces of stiff opaque paper.

The screen formed by the tracing-paper

is placed in the centre of the table, and a lamp is arranged to illuminate it evenly. Pieces of paper cut to various shapes and placed between the lamp and the screen will cast shadows on the latter that can be built up to represent scenes in great variety, whilst small objects, toys, etc., can be added to the collection to increase the reality of the subjects.

The camera is placed at the opposite end of the table to the lamp, and is focussed on the tracing-paper screen, ready to record each subject as it is ready.

A good plan is first to sketch out roughly an idea for a scene before building it up. Old photographic prints containing subjects with

*Moonlight in the Garden.*

*Behind the Scenes.*

well-defined outlines can also be cut up and pressed into service.

Bright patches of lighter tone—such as the moon—can be introduced by using a second screen of tracing-paper, placed close behind the first, with a hole of the right shape cut in it.

The cut-out objects that are placed near the screen will provide the strong tones and dark portions of the picture, while other items arranged a short distance back will allow half-tone

# PICTURES TABLE TOP

**A novel subject for  
Winter evening photography.**

effects on the screen at the same time.

It is a most amusing way of illustrating a story, and having cut out figures to represent the characters, these can be arranged behind the screen in various settings, and a number of pictures may be taken in sequence.

*Uphill to the Crossroads.*

*An Eastern Scene !*

Small pieces of twigs, a handful of grass, lengths of string, and dozens of similar things to be found in or around the house will go to complete the cast or "props" for our shadow theatre, and the rest is a matter of ingenuity on the part of the photographer.

An "ordinary" plate or film will give the greatest contrast, although almost any film can be used for the work. It is impossible to offer an accurate estimate of exposure, but as a rough guide where a 75-watt

electric light is placed 3 ft. from the screen, and the camera is about the same distance on the other side, it will require about 15 seconds at  $f/5.6$  to give a full black tone on a negative, using a slow plate or film.

To ensure that no conflicting shadows will result from the general lighting of the room, and to obtain the utmost brilliance on the screen, it is a wise precaution to switch out all other lights during an exposure, and a black paper framework arranged round the tracing-paper screen will help to keep light from creeping round and creating a possible cause of fog.

As a final touch to an interesting subject, a few bold lines drawn on the tracing-paper screen itself with a stick of charcoal will give the finished result the look of a drawing. This will also help to fill in detail, and the charcoal can be brushed off afterwards.

*Eventide.*

# Electrical Cut-outs

## Something Different for Christmas

By J. STOBBS.

SOMETHING different in the way of a Christmas novelty is described in this article, though possibly readers may think the title indicates a new-fangled wireless device. But this is not the case, for it is intended to show an electrical novelty, and a different way of adapting cut-out photographs, the result being amusing and interesting, to the children especially, and, after all, their pleasures come before ours at Christmas-time.

The model is not difficult to make, the components being obtained almost anywhere. Many people possess a wireless junk box, and terminals, screws, wire, battery plugs and switch of a suitable nature will readily be found. An electrical bell fitting is, however, necessary, and this may be purchased cheaply, or a second-hand one will be quite satisfactory.

First of all a small box is constructed. The inside measurements are 5½ in. long, 4 in. wide and 4 in. deep. Plywood is a suitable material for this. It will be noticed in the sketch, Fig. 1, that the bell fitting is fastened to the front, and this now claims our attention.

Remove the gong and hammer entirely, then drill a small hole through the metal plate at X, Fig. 1, and insert a

piece of brass rod, Y. This should be a tight fit, and soldered if possible where it joins the plate. The brass rod is about 9 in. long by ¼ in. diameter, and is bent over and screwed shown at Z. Similar rod is used for lead-in tubes, but this is generally screwed all along. If this is used care will have to be taken not to damage the thread when bending. This can be avoided by placing a piece of soft wood at each side of the vice when this is done.

The fitting is now fastened to the front of the box. A battery is needed to supply the current, a grid-bias battery will do, and for convenience this goes inside the box. A switch, either tumbler or push, is added—V, Fig. 2.

The wiring of the model presents no difficulties, and the connections (see Fig. 2) are made as follows. Battery to switch (A to B), switch to panel (C to D), coil to battery (E to F). Thin copper wire, covered for preference, is the best kind to use.

And now we come to the photographic cut-out. The style of this will, of course, depend on who the model is intended for, but snaps of children, bathing subjects, or even animals, can all be adapted. The figure should be about four inches high. Small negatives when enlarged to postcard size will generally be found to be right. These should

be printed on stiff card, and it is better for our purpose if two prints of identical size are obtained. Brightly colour these, and cut around the outlines of the figures with sharp scissors.

A glance at Fig. 1 shows the cut-out figure jointed at the arms and legs. With two prints available a complete figure is made, one piece overlapping the other. The joinings are made with small brass screws and nuts, but as it is important that each joint moves freely, screws should be selected where the thread is not quite the full length of the screw. The cut-out is secured to the top of the brass rod at W, Fig. 1.

This completes the model, and when the current is switched on this causes the rod to vibrate, and the figure to move. If a dance record is played on the gramophone at the same time the effect will be more realistic, and by a little dexterous manipulation of the switch on the part of the operator, great amusement is caused when one sees his favourite uncle dancing a jig.

Various ways of displaying the model may be undertaken. For instance, it would be possible to arrange this on the mantelshef, in a kind of miniature

Fig. 1.

Fig. 2.

Fig. 3.

theatre, with only the figure visible. The wiring is taken to some distant point where the operator can switch on as desired. The room is darkened, a flashlamp lights the figure, the music starts, and to a merry dance tune Uncle Joe gives a turn that will add to the fun of any Christmas party.

### A CONSULTING DEPARTMENT.

A NEW note has been struck by Ilford Ltd. in their department opened last week at Tavistock House North, in Tavistock Square. Here in a delightful set of rooms has been established a department for collaboration between manufacturer and user. There is a completely equipped X-ray department, a studio for clinical photography, in which Dufaycolor film is in evidence, a suite of model dark-rooms, a small lecture hall, and an exhibition room. The idea is, as Sir Ivor Philipps, the Chairman of the Company, said at the house-warming, to get those interested in X-ray and clinical photography to make full use of the premises for advice and assistance in their difficulties, and at the same time to enable the firm itself to learn what it is that users want, and to maintain their products at the highest pitch of utility. The note suggested, both in the rooms themselves and at the function, was that in progressive firms the day of pure commercialism is passing, being superseded by the day of co-operation between those who supply and those who demand.

# ...A new conception in camera design..

THE FIRST  
CAMERA  
WITH THESE  
UNIQUE  
FEATURES

Approx. two-thirds actual size.

➡ Built-in photo-electric exposure meter of a sensitivity not hitherto reached. ➡ Screen picture is double the size of actual negative. ➡ Choice of six interchangeable Zeiss lenses. The first time interchangeable lens facilities have been given on a twin-lens reflex. ➡ For the first time in miniature reflex cameras a delayed-action take-yourself release has been incorporated.

## Nothing approaching it to-day..

After several years of research and experiment we present a new miniature precision camera type, the Contaflex. There is nothing similar to the Contaflex, although it is to a certain extent a combination of the Contax and a twin-lens reflex. It is a perfect example of precision craftsmanship, and everything that care and skill can produce has been put into its construction. Naturally the Contaflex is an expensive camera, but not in relation to what it achieves. As a precision engineering job it is unsurpassed, and of the quality of the optical equipment it suffices to say that **Zeiss lenses** are adopted as standard.

# Contaflex

THE TRADE MARK OF THE MODERN CAMERA.

The camera that is five years ahead of any other, yet with no experiments in its construction. Everything has been tried and tested again and again.

Write for particulars of the Contaflex.

Most high-class camera dealers stock the Contaflex, and the name and address of your nearest dealer will be sent on request.

Cassettes, 8s. 6d. each.      Universal Cases, cost £3 7s. 6d., £2 each.	

## GADGETS FOR LEICA OWNERS

- 1.—PIGSKIN EVER-READY CASES FOR LEICA CAMERAS AT STANDARD PRICES. Hitherto pigskin cases have cost about double the price of those made from ordinary leather. We have now arranged with a firm of leather manufacturers to produce these de luxe cases for us at ordinary prices, i.e., 27s. for cameras with f/3.5 lenses, and 28s. for cameras fitted with f/2 lenses.
- 2.—DAYLIGHT DEVELOPING TANKS FOR LEICA FILM.—A long-awaited accessory that will infinitely simplify Leica photography. Rapid in use, simple, absolutely foolproof, this tank takes ordinary daylight-loading cassettes, price £3 3s.
- 3.—PAN-ORTHO FILTER SETS (comprising three filters), light yellow, green, medium and light red. For Leica, 25s. 6d. per set; for Contax, 42s. per set; for Rolleiflex, 25s. 6d. per set.
- 4.—THE NEW WESTON LEICA METER.—The most sensitive on the market, making readings now possible in average artificial light. Price, £5 19s. (We have also received a new Bewi Meter, specially scaled for the Leica. This is small, extremely sensitive and accurate. Price, with case, £4 15s.)
- 5.—AN ENLARGER.—For Leica owners we can supply the fully automatic Focomat, price £16 6s. 6d., or the non-automatic Leitz Valoy, price £9 11s. 6d. For those who require a reliable and well-made instrument at a rather lower price, we are now able to supply the special Vertex (Leica Model), for particulars of which see below.

## NEW ENLARGERS FOR LEICA, CONTAX, ROLLEIFLEX, SUPER IKONTA and EXAKTA owners

We are pleased to announce that we are now able to supply a well-made and inexpensive enlarger to take the now popular 6×6 cm., 4.5-cm. and 4×6.5 cm. negatives.

The new enlarger, the Vertex, is of the single condenser type, with automatic column lock enabling raising and lowering of the enlarger to be carried out with one hand. The lamphouse is unusually large and well cooled, and the negative carrier of simple and convenient construction. It is fitted with an f/4.5 anastigmat and has an orange swing filter. The maximum enlargement obtainable from a 6×6 negative without swinging the head round and projecting off the baseboard, is 15×15 in., or from a 4.5×6 cm. negative, approximately 15×12 in. Price £8 8s.

The other two Vertex models are for Leica and Contax owners. They are supplied without lenses and take the Leica and Contax lenses respectively. Maximum magnification is approximately 7 times linear. Price £6 6s. each.

### MISCELLANEOUS :

Super Ikonta, latest 1935 model, 530/16, taking 11 pictures on 3½×2½ film, f/2.8 lens, ever-ready case. As brand new.....	£23 10 0

(HOLBORN 4780.) (Two minutes from Holborn Tube Station in the direction of Oxford Circus.)

# How I make my EXHIBITION PICTURES

Methods and Ideals of well-known Pictorial Workers.

No. CCCXI.

Mr. BASIL  
BAILEY.

From information communicated to our Special Representative.

"IN the main my exhibition pictures are portraits and nudes, but I always carry my miniature camera with me, and so get shots of unusual and interesting subjects which could not be obtained in any other way. But as both the illustrations to this article are portrait-figure studies I will deal only with this side of my work.

"When I commence a sitting I usually have not the slightest idea of what I am going to do; that develops as the sitting progresses. Sometimes the sitting may be a long one; on the other hand it may last only a few minutes. Sometimes I may commence photography straight away; yet I will often spend twenty minutes or more in the company of my sitter before attempting to make any exposures.

"If the idea is to obtain a character study of the sitter, I am not greatly concerned with his physicality, but with his mental reactions to our conversation. On the other hand, when handling such a subject as the two reproduced, one has to render them in as charming a manner as possible, and in order to do this one must secure their interest. So I try to get them to think as I think, and so bring out my own ideas, rather than try to express their characters.

"What happens during a sitting is that the sitter and myself are both actively engaged in producing the pictures, and the mutual exchange of thoughts and ideas leads to some of them being expressed photographically. In order that the sitting may be a success this co-operation between the sitter and myself must be established. This is all in definite opposition to the theory that the sitter's attention must be distracted from what is being done.

"The two pictures reproduced show two entirely different methods of working. 'Jazz Background' was taken in a large studio where I had 15,000 watts at my disposal. The exposure given was a quarter of a second on a half-plate negative. More recently I have found, however, that I can get more interesting and unusual results by using simple and less bulky equipment. So I now use almost exclusively a  $3\frac{1}{2} \times 2\frac{1}{2}$  T.-P. reflex with an f/3.5 lens, two 500-watt Nitraphot lamps, one of the new Ensign Photospots, and sometimes one or two Photofloods. 'Frills and Flounces' was taken with this equipment, and the exposure was  $\frac{1}{25}$ th of a second at f/3.5.

"I use Agfa Isopan film, and the exposures vary between  $\frac{1}{5}$ th and  $\frac{1}{100}$ th of a second, according to the amount of light in use, and the type of picture required. I find that by using a small camera in the hand I can get shots from any angle, or from any point in the studio, either by lying on the floor or climbing a pair of steps. Thus I get effects and angles that could not be obtained with standard studio equipment and with ordinary methods.

"When making negatives I desensitise, and develop by inspection, usually—but not always—aiming at a fully-exposed negative with plenty of gradation. Prints are made on either chloro-bromide or a suitable grade of bromide paper. Many of my pictures are straight prints, but I have no hesitation in controlling or faking if it will add to the pictorial effect.

"My usual method of control is to work on a  $15 \times 12$  matt print with knife, air-brush, powder and ordinary brush, using process black and white. When finished the print is copied, and the final exhibition picture is made from this copy negative. Incidentally, both the pictures used as illustrations are straight prints from straight negatives.

"My idea in selecting  $3\frac{1}{2} \times 2\frac{1}{2}$  as my standard negative size is that I find it is the smallest size that can comfortably be retouched.

"My methods may sound rather unorthodox. They are! My whole attitude towards photography is: if so-and-so is the usual method, and produces the usual result, then try something different."

(A further example of Mr. Bailey's work is reproduced on one of the Art pages.)

FRILLS AND FLOUNCES.

# Pictorial Analysis

Every week the picture reproduced on the art page opposite will be analysed in detail for the benefit of readers of the paper who are seeking to improve their pictorial work.

"SUN, SNOW AND SHADOW," by F. R. Fraprie.

WITH its fine expression of an effect of sunshine on snow, the subject of this picture is very seasonable, and its brightness, its gaiety, and its feeling of light are typical of the spirit of Christmas. The texture of the snow, in light and in shade, is admirably rendered, and, with the sunlight, combines to form a picture of great and enduring charm.

In a way, it is reminiscent of the subject discussed last week, for, as in that case, it is characterised by an extreme length of foreground. Here, again, the foreground is justified by the nature of the subject, the main attraction lying close at hand and the disposition of the material being necessitated by the curve of the stream and the long lines of the cast shadows. In actual fact, it is the light on the snow that forms the attraction, but it is the shadows that make the light manifest, and, by force of restriction, lend it value.

There is no lack of subtlety in the gradations but, while there may be no appreciable distinction between the values of the lights in several of the brighter passages, there is, nevertheless, no lighter tone of any significance than that in the neighbourhood of the tree (1), and, as this light is accentuated by the presence of the strong darks of the tree—as well as parts of the brook—it becomes the centre of interest and the point at which the attention is focussed. Its importance in the scheme is also stressed by its force of position—it is in close approximation to one of the strong points of a picture formed by the intersections of divisions of thirds—and again by the fact that it is the centre of a system of radiation.

The centre of this system lies at the base of the tree (1). From this point, the lines radiate in all directions. Upwards, there are the lines of the divided bole, which spread out fan-wise as they approach the top; there is the extension of the stream towards

the right-hand side; and, on the left, there are several inequalities of surface which form lines of similar tendency. Inclining downwards, the lines of the shadows on each side, in conjunction with the one in the centre and that of the brook itself, complete the scheme. It is not so regular in formation as to become obvious, but it is apparent on contemplation, and discloses the power

the strength of the formation is amply sufficient to pull the arrangement together, although, to be perfectly candid, the gain in simplicity that would follow their omission, even in this case, would be pronounced.

It is not often, however, that so strong a composition offers itself, and a feature of this character is one that, as a general rule, it is well to avoid in any presentation of snow. It is generally feasible, by a slight alteration of viewpoint, to manage to omit such features without involving the loss of any vital element, and it is conceivable, in this instance, that a viewpoint somewhat more distant and more to the right would have prevented their inclusion.

But, it will be observed, the line assumed by the stream is an almost perfect example of the "S" curve, or line of beauty. Any alteration in viewpoint would affect this line to some extent, and, as it confers a suggestion of grace to the arrangement, it is questionable if it would be altogether wise to make any change. On the spot, of course, it is unlikely that there would be any time for deliberation, and it is probable that choice of arrangement and viewpoint were dictated by instinct; but, even after consideration, opinions would differ, and no two artists would come to precisely the same conclusion.

The *contre-jour* lighting, which is responsible for most of the radiating lines, is a delightful feature, and the way it is treated forms an object lesson in the part that lighting plays in picture-making. Here, not only does it provide the extremely useful long cast shadows, but it enables every little difference in surface to be recorded.

The feeling of sunshine is wonderfully well rendered, and, altogether, the print provides an example of what to look out for if subjects of this nature are contemplated. "MENTOR."

which the system possesses of inclining the attention towards the point from which it emerges. Moreover, by reason of the strong connection established throughout all parts of the picture, a very high degree of unity is conferred, so much so that the picture is enabled to carry what might otherwise have proved a distracting feature in the immature group of twigs on the left-hand side.

In a less efficient arrangement, an element of this nature might well be regarded as a disturbing factor, but

HIS FIRST CHRISTMAS-TREE.

By K. REITZ.

# PHOTOGRAPHIC JIG-SAWS

*A Christmas Gift*

By J. S. *Suggestion*

**P**UZZLES and games of all descriptions are in great demand at Christmas-time, especially jig-saws, for these are gaining increasing popularity. Both young and old in many homes derive hours of pleasure from the solving of a jig-saw puzzle.

The photographer who undertakes the making of these will solve his presents problem, and at the same time be sure his gifts are appreciated. Although numerous ways are found for adapting photographs, I venture to suggest this method will be as popular as any at this time of the year.

A list should be made of friends to whom you think this particular gift will appeal, then study your negatives, so that a suitable picture will be sent to each one. Animal photographs are always interesting to the children, and family portraits will be suitable for some of the older folks. To the rest a good local subject is perhaps the best.

Some photographs are more effective for jig-saws when coloured, and hints as to colouring and tinting are from time to time given in *The Amateur Photographer*. Whole-plate enlargements are the best size, with white margins for preference. In simple squared puzzles, postcard size may be used, but nothing smaller should be attempted. Cut-outs, if sufficiently large, will also do for our purpose. The point to remember, how-

*A simple jig-saw for children.*

ever, is the younger the person the simpler the puzzle should be.

The materials required are few—thin plywood, paste, fretsaw, and suitable photographs. Paste the photograph to the plywood, weight this down, and

leave to dry. When this is completed the design is added.

All manner of designs may be used, the most simple being of straight lines only. It is possible to introduce curves and interlocking pieces, just as the designer wishes, or, for variety, initials, etc., may be put in. The interlocking system is the best, for once the pieces are in position they remain there until the puzzle is completed.

It is advisable to draw the design first on white paper, and afterwards it should not be beyond any one's capabilities to transfer this to the photograph. Draw the design in pencil, then go over this with drawing-ink.

Difficulties may be encountered in manipulating the fretsaw, but a little practice should first be done on pieces of thin wood. A fine saw is best for cutting out the various pieces, but the more intricate the design the longer it will take to cut. Care must be taken to keep the saw to the line. On the back of the wood a slight burr will be noticed after cutting; this can be removed with a touch of sandpaper.

When the cutting is completed each piece is placed in position to make sure the jig-saw is correct before sending. It now remains to pack the puzzle in a neat little box, a plate or postcard box will do, but first cover this with fancy paper and add a seasonable greeting. A copy of the design or small print of the picture may be included, but this should only be referred to if the puzzle proves too difficult to solve.

*More difficult interlocking design.*

# CHRISTMAS Children

By K. REITZ.

To make studies such as those shown here-with it is necessary first of all to create the Christmas spirit. I therefore never attempt to take these pictures without first procuring a Christmas tree, dressing it up myself with plenty of toys and other ornaments. Coloured balloons are hung up all over the place and the room is warm and cheerful. Children like colour and respond more readily to the advances of the photographer when they are among happy surroundings.

Before attempting to take any pictures I make friends, and play with the little ones

*The Joys of Christmas Morning.*

*"That one—please."*

PICTURES of pretty children are always popular. Either as simple portrait studies, as a series telling a story, or for use as greeting cards, they invariably command attention. At the present time when the production of Christmas and New Year cards is occupying the attention of thousands of amateur photographers, a few notes on the methods I employ in making seasonable child studies may prove of interest to other readers of "The A.P."

The first essential is, of course, the right type of model. The child—or children—should not be too old or sophisticated, and they must be pretty and jolly-tempered.

*A Taster.*

for some time till they are thoroughly at ease, and not until then do I bring out my camera and start operations.

Once started, however, it is necessary to work quickly, taking many exposures without the little models being aware of it, making it all part of the game. The various ideas for poses and series should have been thought out beforehand, so that the "sitters" can be coaxed into the right places and led to do the right things without fuss or bother. The exposures can then be made without delay.

# MAS

## ld Studies

"Now try mine!"

His Dream come true.

aperture  $f/4.5$ , secures fully-exposed negatives.

Those not possessing cameras with large-aperture lenses can, however, obtain very good results by the aid of a small flashlamp, such as the Agfa. Before the advent of the floodlamps I made hundreds of child studies by flashlight, and many of them were as good, if not better, than those taken by electric light.

The secret of success with flash-light is to use a Japanese silk diffuser in front of the light and always to keep all other lights full on in the room in which one is working. Flash-powder as smokeless as possible should be used, and then as many as six to eight exposures in succession can be made without discomfort. Half a teaspoonful is ample at a distance of six feet, using a diffuser and lens stopped down to  $f/11$  on fast panchromatic film.

Every photograph I take is made on panchromatic film or plates, and the results speak

for themselves. The majority of my negatives are developed by the Dr. Knapp method as described previously in *The Amateur Photographer*. This takes time and care, but the superior quality of the negatives makes it well worth the extra trouble. Whatever the methods of exposure and development they should be directed to securing good tone values. The resulting prints should be soft, but not flat, brilliant but not harsh in contrasts.

"This is how it's done!"

Something to go on with.

# PUZZLE Photographs

By  
JOHN BRATBY.

HERE is another idea for entertaining your guests at Christmas.

A set of puzzle pictures similar to those that illustrate this article should be made. About a dozen such photographs can then be taken and each numbered and mounted on a suitable card. These photographs should be enlargements, and the cards should be arranged in conspicuous places about the room. Those wishing to take part in the game should be given a piece of paper and a pencil so as to be able to write down the solutions as they are guessed. About ten minutes should be allowed for solving the problems, after which the competitor who has correctly guessed most is declared the winner.

All the illustrations are photographs of some familiar object taken from an unusual angle. The best subjects are those taken from directly above, provided the objects have a certain amount of height, so that the parts nearest the camera become exaggerated compared with the rest. A certain amount of difficulty may be experienced in arranging the camera, if there is no tilting top

to the tripod, so that the objects can be taken in this manner.

The most satisfactory method is to fix the camera on a tripod, and then to rest the tripod horizontally on the top of two chairs placed back to back about two or three feet apart. Some suitable weight must be attached to the bottom end of the tripod to counteract the weight of the camera. Other suitable angles can be found by experiment.

Generally speaking, the background should be in contrast to the object, and for a black background velvet will be found most suitable. Photographic mounts or pieces of coloured paper will answer when a light background is required.

Any of the various electric flood-lights now so frequently advertised will be found

to form a suitable source of illumination.

Alternatively, some flashlight outfit may be used, and in either case the chief source of illumination should be just above and to the right of the camera, and on the opposite side of the object there should be a white reflector to avoid heavy shadows.

[Solutions to the puzzles will be found on another page in this issue.—Ed.]

# PICTURES by Novices

## SOME CRITICAL COMMENTS on the Beginners' prints reproduced on the opposite page

WITH the advent of the first set of snow pictures of the present season, it may not be inappropriate to discuss them, not so much with a view to criticising their deficiencies, but rather with the idea of indicating those points in which they may excel and how those points may be utilised in treating similar subjects as and when the occasion may arise.

### Sunshine and Snow.

As a preliminary, it may be mentioned that it is rarely possible to make anything of a snow picture unless the fall is of a considerable depth and sunshine and shadow are evident.

The points are well exemplified in the picture reviewed this week under the heading "Pictorial Analysis," and, although in a different category, "A Winter Afternoon," by A. Jackson—No. 1 of the prints reproduced on the opposite page—also confirms these contentions. That the depth of snow is adequate is to be judged from the facts that there are no patches of grass or twigs or herbage showing through, and, at least as far as the immediate foreground is concerned, the surface of the snow is continuously maintained.

It retains its contours and has a certain amount of form. The form is emphasised by the sunlight and the shadows it casts, but the latter are in keeping and do not introduce the sense of harshness and distraction that arises from the intense darks that such protrusions cause.

Pictorially, the play of sunlight and shadow makes a worthy motive, and, with an excellent rendering of the texturous quality of the snow, makes a subject of not inconsiderable appeal. It is, however, questionable if the introduction of the figure is at all helpful, nor does it seem essential that so much of the trees should be included.

### Foreground Subjects.

The real picture lies in the foreground, and, without the figure and somewhere about three-quarters of an inch from the top, all that is useful would be included. There is no point in retaining anything else, and, as a general rule, it will be found that most snow pictures are better dealt with as foreground studies, purely and simply, than in any other way. It is so in the case of No. 2, "A Beech Wood in Winter," by N. M. Potter,

where the upper half contributes little of interest and all the attraction lies in the immediate foreground.

It is, perhaps, not quite so apparent as in the former print, for the distinctions between sunlight and shadow are not so well brought out. With the removal of the top portion, however, it would be possible to substitute a more vigorous grade or type of paper, which, with its steeper scale, would stress the tonal differentiation. If, on the other hand, the whole print is so treated, the extra emphasis would extend to the darks of the trees and also to the light of the sky. At present, the sky is lighter than the light on the snow, and, with the change of paper, it would have no tone at all if the snow were printed just to a sufficient depth, while, with the increased darks of the trees, the contrast would seem excessive.

On this account, and also having regard to the fact that the foreground is the vital feature, it is necessary to avoid the inclusion of any portion of the sky, and, while a little more length would have been desirable, the interest, with the accession of greater vigour, becomes adequate enough.

### Simplicity a Virtue.

The suggested revision, in both cases, has the effect of simplifying the arrangement and making the picture more intelligible. No. 3, "The Stream thro' the Wood," by F. Price, provides an example of an intentional treatment as a foreground study, the viewpoint having been depressed to get it.

It is quite probable that there has been a measure of simplification in consequence, but, owing to the prominence of the stream, the snow—or the manner of its rendering—is not so vital a feature. Moreover, the simplification is, to a not inconsiderable extent, counteracted by the inclusion of intruding branches on each side. Had their effect been foreseen, it would have been an easy matter to have arranged for their exclusion by a slight change in the point of view. This should really have been done, for, now that the negative has been made, no alteration is feasible.

A similar choice of stance would, however, have been of inestimable value in dealing with such subjects as Nos. 1 and 2, where the effect can readily be imagined.

### Winter Landscapes.

With No. 4, "A Study in Trees and Snow," by G. E. Schluter, the case is rather different, for the attraction here is rather in the curious formation of the snow on the tree branches and the way they are outlined in light than in the snow of the foreground.

If this be the intention, it succeeds quite well, but it is probable that, could a background of slightly heavier tone have been found, both features would have been better displayed. In this instance, as in the cases of Nos. 1, 2 and 3, the interest is near at hand, and, taking it all round, it is best that snow subjects should be so arranged, for, in other circumstances, it is rarely possible to convey an impression of its character and texture.

It is for this reason that open landscapes, with snow as a feature, are seldom entirely successful. No. 5, "Winter Beauty," by A. W. Harttree, is as good, no doubt, as could be managed with the material, though the proportions of landscape to sky are too nearly equal, but its scope is too widespread to suggest the same intimate appeal that was so evident in No. 1, nor, with such a broad expanse, is it possible to localise the interest effectively.

### Technical Treatment.

Much the same remarks are applicable, again, to No. 6, "Ober Gurgl," by Thomas A. Waller, though, here, the technical treatment is at fault, and the presentment is much too vigorous and contrasty.

This could be corrected by the substitution of a softer grade of printing paper, but, pictorially, the lack of an effect of sunshine is felt, and the wisdom of including such heavy darks in the immediate foreground is doubtful. Sufficient has been said, however, to indicate the desirability of looking out for subjects of the foreground type, and during the present season it is to be hoped that we shall be blessed with snowfalls of ample depth followed by brilliant sunshine.

In that event, there will be plenty of work to do, and that it may meet with success, and that those whose bent lies in other directions may be equally fortunate, are the Christmas wishes of "MENTOR."

# With the Beginners

NOTES AND NOTIONS FOR THE  
LESS ADVANCED WORKER

Every week an article will appear under this heading dealing with a topic of interest to the novice in photography.

## PEN AND PHOTOGRAPH.

A GOOD deal of varied and interesting work can be done with pen and ink, with the aid of photographs, and winter evenings provide a suitable opportunity for such a pastime. In its simpler forms no great skill is required, but with practice it is possible to achieve something much more ambitious, with distinct artistic merit.

I will try to indicate how the beginner may make a start on this kind of work. He may be quite incapable of making a sketch of a lion from life, but with the aid of a photograph he could soon make such a drawing as Fig. 1, using simple bold lines without anything really difficult in the technique.

In such a case he should make two prints, one of normal strength and tone, and the other in a sort of high key, with all the detail visible, but no very dark tones. To get this he should over-expose, and stop development as soon as all details are visible. This print, which is the basis of his pen drawing, should be on smooth matt bromide (or gaslight) paper; glossy or semi-glossy surfaces are unsuitable.

Pens of different degrees of fineness may be used, but the ink must be of the "fixed" variety. The light print makes it easier to judge the effect of the pen work. This may be completed

on the print, or only the bolder parts done, and additional work added after the photograph has been removed. If desired, the outlines only may be drawn in pencil and the whole of the pen work done afterwards. The full-

Fig. 2.

but the silver has been turned into a form that will darken under the action of daylight. It is advisable, therefore, to do the bleaching by artificial light. Now rinse the print in several changes of water, and then fix it in the usual hypo bath for bromide prints. Wash in more changes of water, taking care not to touch the surface, and hang up to dry. The result is the drawing, in whatever form it may be, on plain paper. The photograph has vanished for ever.

Fig. 2 is a simple example made on a quarter-plate print, very much simplified, and largely conventional in treatment. Fig. 3 shows a method of getting a silhouette effect. The outline is drawn with a pen, and then filled in with a brush. Naturally, this is suitable only for certain subjects, but should be borne in mind.

In Fig. 4, the details of the font have been emphasised and the whole thing isolated from its surroundings; while Fig. 5 illustrates the idea of using only a small part of a larger subject.

It is evident that we have here a method of producing Christmas and other greeting cards, calendars and souvenirs, in a form that is a welcome

Fig. 1.

tone print is used as a guide for the effect to be secured. It need not be followed rigidly; details may be omitted, inserted or modified.

The photographic image can be removed in several ways. Here is a simple method. Crush to powder some crystals of copper sulphate, and dissolve in warm water so as to get a deep blue solution; then add some ordinary salt. Exact quantities are not necessary; if the solution does not work quickly, add more salt.

Lay the print in a dish and pour on the (cold) solution. The image soon disappears,

Fig. 3.

# ACCEPTABLE XMAS GIFTS FOR AMATEUR PHOTOGRAPHERS

## "OPTOCHROM" LIGHT FILTERS

### FOR ROLLEIFLEX, LEICA and CONTAX CAMERAS

Set of 4 filters, 1 each Yellow, Green, Blue and Red, with holder in velvet-lined leather case.

To fit Rolleiflex lens, 28.5-mm. diameter ..... £2 5 0  
To fit Leica lens, 36-mm. diameter ..... £2 10 0  
To fit Contax lens, 27-mm. diameter ..... £2 0 0  
To fit Contax lens, 42-mm. diameter ..... £3 0 0

## "AKRISKOP" FOCUSSING MAGNIFIER

Simple to use and positive in results, the "Akriskop" eliminates all waste due to poor focussing with vertical enlargers and assures the best possible results from miniature negatives. It is accurate to a microscopic degree which cannot be attained by the unaided eye. Price £3 : 3 : 0

## THE "LEUDI" EXPOSURE METER

Less than half the size of an ordinary pocket lighter—the "Leudi" is easily the smallest and neatest exposure meter made. It is as effective indoors as out of doors and can be used with plates or films of any make.

Price only 5/-

Purse case, 1s. extra.

## "UNIVERSAL" CAMERA HOLDER

A neat, portable accessory, fitted with camera screw, with ball-and-socket head. Can be attached to a fence, gate, tree, table or any other solid support from which the desired view can be photographed.

Price 7/6

Soft leather case, extra 2/6

## THE LEICA MANUAL

Here is a book which represents the accumulated experiences of 22 specialists and pioneers in Leica photography. No other book has ever attempted to cover the broad scope of Miniature Camera photography as thoroughly as the Leica Manual. 500 pages, 350 illustrations. 21/-, postage 6d.

## PICTURE PROJECTION

### WITH A K.W. EPISKOP

In Black-and-White or in colours!

Designed specially for home use, the "K.W." Episkop is a wonderful new picture projector which enables photographs to be projected up to 18 times their original size, whilst flat, opaque objects such as postage stamps, cigarette cards, etc., can also be shown in their own colours.

Complete with cable and switch

£5 : 15 : 0

100-watt lamp, extra ..... 5s. 0d.

## "CORREX" DEVELOPING TANK

The "Correx" Roll Film Developing Tank represents the simplest, safest and most certain way of developing roll film. Any amateur using the "Correx" according to the simple instructions can be sure of properly developed negatives.

No. 733. "Correx" Tank for V.P. films ..... 25s. 0d.  
No. 733. "Correx" Tank for 3½ x 2½ in. films ..... 25s. 0d.  
No. 736. "Correx" Tank for 4½ x 2½ in. films ..... 30s. 0d.  
"Correx" Thermometer (Fahr.) ..... 2s. 6d.  
"Correx" Developing Powders, 6 pairs ..... 1s. 6d.

## S.H. GRAVURE ENLARGING FRAME

The S.H. Gravure Enlarging Frame will give your photographs a unique distinctiveness, so that they will cease to be "just photos." It does not necessitate the use of special paper, but enables a variety of novel and extremely beautiful effects to be easily produced on any enlarging paper and with any vertical enlarger.

Complete with 3 screens and masks, 1-pl., whole-plate and 10 x 8 in. Price £2 : 2 : 0

## "OPTOCHROM" DAYLIGHT LOADING ROLL-FILM DEVELOPING TANK

Here is the simplest and handiest daylight loading developing tank ever devised for the amateur. No dark-room; no changing-bag needed; nothing but the Optochrom-Automat Tank itself.

Before developing, the paper backing to the film is automatically drawn away, leaving the film in the tank ready for developing.

To take 2½ x 2½ in. or 2½ x 3½ in. roll film. Safely packed, with full directions for use ..... 35/-

## "PRINSEN" VEST-POCKET ELECTRIC EXPOSURE METER

PRICE ONLY £3:3:0

Ever-ready case, 5s. 0d.

The "Prinsen" Electric Exposure Meter is the smallest exposure meter controlled by a photo-electric cell ever produced. Carried easily in the vest pocket the "Prinsen" needs only one simple adjustment to the H. & D. speed of the plate or film in use. Then, with its lens presented at the subject to be photographed, it registers the correct exposure for any lens aperture instantly.

## 4,000 - C.P. FLOODLIGHT REFLECTOR for Portraiture at home.

This reflector can be connected with any ordinary electric lamp-holder, or wall plug, and directed at the sitter from any angle.

PRICE 25/-

Including 4-ft. flex, with lamp-holder, also wall plug fitting.

Extra 9-ft. flex with wall plug ..... 5s. 0d.  
Diffuser ..... 12s. 6d.  
Tripod ..... 12s. 6d.  
250-watt Nitraphot Lamp ..... 7s. 6d.  
500-watt Nitraphot Lamp, 20s. 0d.

Please state voltage when ordering.

BRITISH MADE (Lamps excepted.)

## "DREM" EXPOSURE Meter

The "Justodrem" indicates the correct exposure for any lens aperture instantly after setting the Scheiner scale according to the speed of the plate or film to be used, no other adjustment is necessary. A list of Scheiner speeds of roll films, film packs and plates is supplied, with simple instructions for use.

Price 15/-

Leather case, extra ..... 3s. 0d.

## THE ONE - HAND CAMERA HOLDER

Here is a most ingenious and handy attachment for holding a camera at eye-level. Made of ebony wood, and fitted with tripod screw and rubber washer, this one-hand holder can be used with any hand camera provided with bush for tripod screw.

# THE MISCELLANEOUS TRADING COMPANY LIMITED

ESTABLISHED AT THIS  
ADDRESS FOR 15 YEARS.

13, NEW OXFORD STREET, LONDON, W.C.1

(HOLBORN 4894)

Fig. 4.

either in handwriting or printed letters.

The subject will depend on circumstances. Fig. 3 would be merely personal; Figs. 4 and 5 might be local objects of interest; Figs. 1 and 2 are of more general appeal.

It would take considerable time to turn out a number of such drawings, however simple their treatment; but when duplicates are required it is an easy matter to make them, and if properly done they should be indistinguishable from originals.

For such reproduction purposes it is well, if possible, to make the original rather larger than the copies are to be. The drawing is set up in a good even light, and photographed on a very slow plate or film, the grade known as "Process" being the best. With suitable exposure and development the negative will show the lines perfectly transparent, while all the rest will be opaque. On a vigorous bromide or gaslight paper the prints will look exactly like pen drawings.

With suitable subjects the effect can be greatly improved by tinting

Fig. 5.

(not painting) with water colour. It is no easy matter to lay a large flat wash on any photographic paper, but this is seldom necessary. A few light and simple tints are all that is required. Some of the old tinted engravings, or modern tinted etchings suggest the idea.

These hints will, I hope, put a great many beginners on the track of a pleasant winter evening occupation, and lead them later on to investigate its further possibilities. W. L. F. W.

## "The A.P." Novices' Competition

### A RECORD ENTRY.

**A**LTHOUGH we are accustomed to very large photographic competitions running into many thousands of prints, we were overwhelmed with the vast number of entries in the competition specially for novices held during the past year and closing in the autumn. The novelty of the prizes probably had something to do with the enormous entry, which included snapshots from all parts of the world.

Judging such a competition has proved no easy task, but the final selection has now been made. We have delayed the publication of the award list until the present week so that it will come appropriately in the special "Christmas Presents" Number of "The A.P."

The awards are as follows:

**FIRST PRIZE** (two roll films every week for a year), awarded to N. Johnson Travers, Windmill Cottage, Mayfield, Sussex. (Title of Print, "Up so High.")

**SECOND PRIZE** (two roll films every week for six months), awarded to A. K. Byrne, The Elms, Pinner Road, Pinner, Middlesex. (Title of print, "Spirit of Sport.")

**THIRD PRIZE** (one roll film every week for six months), awarded to C. L. Clinton-Thomas, University College Hospital, W.C.I. (Title of Print, "Hill Top in Majorca.")

Twelve consolation prizes (one roll film every week for three months) have been awarded to:

Verona Roberts, Reversion, Toastreet Way, Harpenden. ("Playmates.")

Geoffrey Cox, 162, Beeches Road, West Bromwich ("Barbara.")

W. Lea Boynton, 62, Gerrard Street East, Toronto, Canada ("The Coquet.")

Mrs. Arnold Elliott, Glenbeigh, Colesdown Hill, Billacombe, Plymouth. ("Baby Want It?")

Miss Anne Brennan, 41, Courtney Street, Hull. (Portrait.)

C. O. Harvey, c/o P.O. Box 1048, Durban, Natal, South Africa. ("Preparing his Breakfast.")

S. N. Bose, Viceroy's Camp, India. ("The Bubble.")

Miss M. C. Clarke, Lake View, Mileford, Co. Donegal. ("R.S.V.P.")

A. L. Norman, High Street, Chatteris, Cambs. ("Marionette Mower.")

H. H. Snaith, 2/East Lancashire Regiment, Hong Kong. ("Mary.")

F. C. Smith, 66, Radbourne Road, Shirley, Birmingham. ("Tit-Bits.")

D. Eadie, Blackford, Wilmslow, Cheshire. ("Bedtime," the smallest print in the competition, measuring  $\frac{1}{4} \times \frac{1}{2}$  in.)

## "Photograms of the Year" 1936

**I**T would be difficult to name an annual whose appearance is so eagerly welcomed at home and abroad as "Photograms"; and here, in all its beauty and interest, is the 41st volume. Vast strides have been made in photographic art in those forty years, and the latest collection of representative international camera pictures is truly and literally wonderful.

The seventy-nine pictures included are of infinite variety in subject and treatment, and every plate demands careful examination and thought. There is nothing trivial. Many at once present themselves as profound, impressive, dramatic; others, in quieter or lighter vein, have to be pondered and analysed before their subtleties can be fully appreciated. "Art," in the truest and fullest sense, is the essence of the book.

The critical notes by Mr. C. J. Symes are helpful and interesting. They aid the uninitiated to understand and appreciate the various examples; while the more sophisticated will find it stimulating to compare the critic's vision and opinion with their own.

From a score of countries where photography flourishes come reports of the year's work and progress, the stories being told by narrators with special local knowledge. It is interesting to find a new name in this comity of nations—China. Japan has long had its "school"; India is rapidly developing one; and there can be no doubt that China, suddenly awake and alert, will soon achieve characteristic individuality in photographic art.

A special feature of the volume is a supplement containing particulars of the photographic and cinematograph societies in the British Isles, including the various Alliances and Federations, Record and Survey Societies and Postal Camera Clubs.

As usual, Mr. F. J. Mortimer has performed his difficult task with complete success, and his efforts have resulted in the production of a delightful book. "Photograms" has long been recognised as an ideal gift book for Christmas or any other season. It not only appeals to photographers but to all those whose culture and taste give them pleasure in a particularly attractive form of graphic art.

"Photograms" is obtainable from all booksellers, newsagents and bookstalls, or direct from the publishers, Messrs. Iliffe & Sons Ltd., Dorset House, Stamford Street, S.E.1. The price is 5s. in paper covers, and 7s. 6d. in cloth boards, postage being 6d. in both cases. W. L. F. W.

# Picture Points

## for Beginners, No. XXVII.

by  
RICARDO

### Cutting off the "Feet"

**I**N the snow scene in last week's "Picture Points" we saw the advantage of lowering the camera in order to include more foreground, which, in this instance, provided the main point of interest, the shadow.

There is, however, a great danger of doing so whenever the subject matter includes human figures, houses, and trees, etc., that will have their "feet" cut off by the consequent "rising" of the foreground planes. This is explained by the first sketch. This might be a tempting viewpoint to take because of the tree in the left foreground which helps to provide a lead-in to the picture, and if the camera were lowered so that the roots should be included, the objects in

the far distance would have their "feet" cut off the higher they were placed in the print. As they should provide greater pictorial interest than the foreground material, it is far better to take a closer viewpoint, so

that they should be seen standing on their various supports on the ground and give a sense of stability to the general scheme, instead of seeing them apparently sitting on the edge of some closer plane.

### Cloud Perspective in Double Printing

**T**HIS is a point to be considered when employing a separate cloud negative for the purpose of filling up the blank sky in an otherwise interesting landscape or seascape.

It is concerned only with perspective, sometimes called the "vanishing point," that we see most clearly when out in the open. There is a line called the horizon to which all objects, on the ground, on our sides or in the sky, tend to "vanish."

They may all lead to different points on this level line but if they are parallel to the ground they never vanish to a point above or below this line.

The two sketches illustrate this point quite clearly. The right-hand sketch shows the natural cloud perspective on the horizon, with the cloud formation purposely made very regular and directional for clarity's sake.

If we were to take the negative of this subject and use it in another landscape we should have to take care that this vanishing point, if at all definite, should come to rest on the horizon of the second landscape.

If it were printed as shown in the left-hand sketch, the tendency for the clouds to vanish below the horizon would condemn the picture as being unnatural and reveal the double printing.

### Double Shadows

**A**FTER some practice with artificial lighting, the novice, if he is at all experi-

mental, tries his hand at back lighting as well as from the orthodox angles. This is excellent practice, but there are one or two points to be considered.

The first thing that should be remembered in all such subjects is that the lighting,

wherever it is placed, should only contribute to the general presentation, and very rarely should it call attention to itself and its position. That is why so many portrait studies are failures as portraits. The method of lighting seems to predominate instead of being employed *only* to show the characterisation and modelling of the face.

In the top sketch we can see what happens when a back light is included at an equal distance from the subject as the side light. Two shadows are thrown both of equal tones and shapes and in different directions. This draws too much attention to the shadows instead of the grouping of the subject and immediately detracts from the main point of interest.

If the front shadow is to be relieved, the back light must be weaker or else moved farther away, and preferably directed so that it illuminates only the flowers and not the vase. A diffuser, in the nature of thin white fabric, is a great help towards softening the hard light. This diffuser is particularly useful for both lights for portraiture.

## NEW MODELS

The new Vauxhall Camera is now fitted with unbreakable bakelite body and many improvements. Takes 16 pictures on standard 8-exposure  $2\frac{1}{2} \times 3\frac{1}{2}$  roll film, self-erecting front, fine-grained leather finish, ingenious internal window covers for use with pan. films, f/2.9 anastigmat in delayed-action Compur shutter.

# Photographing Amateur Theatricals

## A SEASONABLE SUBJECT FOR THE AMATEUR PHOTOGRAPHER

By RICHARD B. WILLCOCK.

**M**ANY of the difficulties which confront the new-comer to photography of amateur theatricals are due mainly to the fact that he is treading unfamiliar ground, rather than to a serious lack of photographic knowledge. The following well-tried methods should do much to remove such obstacles as may face the beginner at the outset.

The photographs are best taken during a full-dress rehearsal, at which time all costumes, make-up, scenery and other properties are available.

Decide with the producer beforehand the number of photographs required, and the exact nature of the scenes. It is advisable to avoid scattered groups of full stage width, since the tendency is to diminish the size of the players and give undue prominence to the scenery and properties.

Closing up of the characters to form a group to the proportion of the plate size, as in Fig. 1, is a more satisfactory arrangement which pleases all concerned. A group need not faithfully represent any particular scene, and may be amplified by the addition of players who are normally "not on" in the scene.

This was deliberately done in Fig. 2, with a corresponding increase of interest. Such a method is commonly resorted to when for publicity purposes the whole of the cast of players is required to be shown.

Although sometimes desirable, it is by no means essential that the different back scene for each act should be photographed; the players are the centre of interest, and any needed variation may be effected by changing the stage position and altering the position of stage furniture.

The size of camera for this work is immaterial, provided it is one that the worker is familiar with. What does matter, however, is that provision should be made for careful focussing to include the whole of the groups and settings on the plate or film. For this reason cameras of the reflex or field

Fig. 1.

type are admirable for the purpose as they permit the scene to be observed on a focussing screen. A firm ash tripod is also a necessity.

If a focussing scale only is available on the camera, the distance to the figures in the centre of the stage must be gauged accurately to get the sharpest result, and the outer limits of the group should be indicated by two lighted candles (or electric lights, if available). These can be seen easily on the finder, but must be removed before the photograph is taken. The photographs herewith were taken with a Kodak view camera with f/6.8 lens stopped down to f/11. S.S. panchromatic film was used.

Whilst auxiliary lighting in the form of "Photoflood" or "Nitraphot" lamps may be used, they form items not always found in an amateur's equipment, and the use of flashlight is recommended as an inexpensive substitute. Where a good flat stage-lighting already exists, an exposure of a fraction of a second to this light prior to the flash will produce softness and prevent any strained expression on the faces of the players.

The accompanying photographs were all taken in this manner, using 50 grains of flashpowder ignited by an Agfa flint lamp.

The lamp was placed slightly to the left and two feet higher than the camera, which was stationed in the auditorium, the lens being just over three feet above stage-level. Harshness is only avoided by guarding against under-exposure, and the beginner is advised to make one or two trial exposures at an early rehearsal, on an average group, basing his subsequent exposures on the results.

The shutter on the lens should be set to "B," and opened immediately before the flash is made and closed immediately after.

Soft, well-graded negatives should be aimed at, and with the exposure given above these can be secured with fifteen minutes' development, using the maker's metol-hydroquinone-pyro formulae and time and temperature methods. Developers, such as "Rytol," "Azol," "Certinal," "Kodol," etc., are also eminently suitable for this class of work.

Fig. 2.

# NEWS AND REVIEWS

ITEMS OF GENERAL INTEREST FROM ALL QUARTERS.

A new photographic club has been formed in connection with Ardeen Recreation Club (Nobel's Explosive Co., Ltd.), Stevenston, Ayrshire. An attractive programme has been arranged for the winter, and dark-room facilities are available. Any one in the district who may be interested should communicate with the Hon. Secretary, Mr. W. Cameron, Glenetive, Stevenston, Ayrshire.

An exhibition of photographs by Dr. Erich Salomon is now on view at the Ilford Galleries, 101, High Holborn, W.C.1. These interesting pictures of well-known personalities taken in the intimate manner in which Dr. Salomon excels are well worth seeing. Readers should endeavour to pay the show a visit. It is open daily from 9 a.m. to 6 p.m. Saturdays, 9 a.m. to 1 p.m. Admission is free.

The Dresden branch of Zeiss Ikon are publishing a review entitled "Photographie und Forschung" (Photography and Research), dealing with the advantages of the modern miniature camera to scientists and others engaged in instructional and research work—particularly those attached to universities, colleges, hospitals, etc. At the moment the review is issued in German only, but the English branch is proposing to publish regularly an English translation. Readers of "The A.P." to whom this will be of special interest should communicate with Zeiss Ikon, Ltd., Mortimer House, 37-41, Mortimer Street, W.1, and a copy will be sent free when published.

Another attractive little book has been published dealing with miniature camera work and forming one of the

series already issued by the Fomo Publishing Co., of Canton, Ohio, U.S.A. It is entitled "The Fine Grain Negative," and is by Augustus Wolfman. It embodies all the practical matter that has already appeared on this subject, and much that is new. In addition many pages of developing and other formula are given which will appeal to the keen miniaturist. The book, which is well presented, costs 5s., and is obtainable from the sole agents, Sands Hunter and Co., Ltd., 37, Bedford Street, Strand, W.C.2.

The Camping Club of Great Britain and Ireland are holding an inaugural meeting this evening (Wednesday, December 11th), at the Club Headquarters, 38, Grosvenor Gardens, S.W.1, to consider the formation of a photographic section. Many members of the club are already amateur photographers, but it is desired to organise these with a view to increasing the interest in photography in the club and to raise the standard of production generally. Any reader desiring further information should communicate with the Secretary of the Camping Club, Mr. H. W. Pegler, at the above address.

The Service Company, Ltd., of 289, High Holborn, W.C.1, have issued a useful little booklet of considerable interest to every amateur cinematographer. It is titled "Home Movie World," and contains illustrated catalogue information regarding practically every ciné accessory and most ciné cameras and projectors on the market. Reels of film for hire are also listed. For handy reference it should prove of great use. A copy will be sent free on application to the above address.

We have already referred in terms of praise to that charming book for children, with photographic illustrations by Gilbert Cousland, entitled "My Little A B C," published last year. A second book by Mr. Cousland has now appeared. This is called "My Little Farm Friends," and, as the title indicates, deals with farm life and animals, presented in an intimate manner that will appeal to every child—especially the town child with happy memories of holidays on a farm. Twenty-six plates are given, and with each is a brief description suitable for readers of tender years. It is a most delightful gift book for a young child, and we congratulate the author again. The price is 3s. 6d., and it is published by W. Collins, Sons & Co., Ltd., 48, Pall Mall, S.W.1.

"The Leica Manual" is an attractive and informative handbook recently published, and although, as its name implies, it has been compiled principally for the Leica enthusiast, it is also a very complete handbook on photography suitable for all workers. A noticeable feature of the book is that each of its twenty-nine chapters has been written by a specialist in a particular line, so that the information given on each branch is sound and practical. It is profusely illustrated with no fewer than 350 pictures and diagrams spread over its 500 pages, making it both thoroughly interesting as well as instructive. It is obtainable from the Fountain Press, 19, Cursitor Street, London, E.C.4. Price 21s.

Solutions to the puzzle pictures given on page 570 are as follows:

- No. 1. Egg in eggcup.
- No. 2. Electric pylon from below.
- No. 3. Electric bulb in shade.
- No. 4. Row of books. Front view.
- No. 5. Glass tumbler.
- No. 6. Cream jug.
- No. 7. Soda-water siphon.
- No. 8. Kitchen oven door latch.

## Exhibitions and Competitions

### CURRENT AND FUTURE.

Notices of forthcoming exhibitions and competitions will be included here every week if particulars are sent by the responsible organisers.

The Amateur Photographer Monthly Competitions for Beginners, Intermediate and Advanced Workers.—Entries, December 31. Rules in the issue of November 27.

Leicester P.S. International Exhibition.—Entries, January 24, 1936; open, February 24–March 7, 1936. Exhibition Secretary, H. Foscutt, 19, Doncaster Road, Leicester.

Preston Scientific Society.—Eleventh Annual Open Photographic Exhibition. Monday, February 3 to Saturday, February 15, 1936. Entries close, Friday, January 10, 1936. Particulars and entry forms from the Exhibition Secretary, F. Wells, 65, Powis Road, Ashton, Preston, Lancs.

Scottish National Salon.—February 8–29, 1936. Entries close, January 11. Particulars and entry forms from the Hon. Salon Secretary, Norman G. Brown, 36, North Lindsay Street, Dundee.

The 40th Annual Exhibition of the South London P.S.—Open, February 15–March 14, 1936. Entries close, January 21. Further details and entry forms from Hon. Exhibition Secretary, H. S. Adams, 40, Stockwell Park Road, London, S.W.9.

Ilford Photographic Society.—Annual Photographic Exhibition. From Monday, March 2 to Saturday, March 7, 1936. Closing date for entries, Saturday, February 1, 1936. Particulars and entry forms from

E. G. Roughton, 63, Havering Road, Romford, Essex. Edinburgh Photographic Society.—74th Annual Open Exhibition. Open, February 22–March 7, 1936. Entries close, February 3, 1936. Particulars and entry forms from the Hon. Exhibition Secretary, Geo. J. Kennedy, 16, Royal Terrace, Edinburgh.

Birmingham Photographic Society.—45th Annual Exhibition. Open, February 29–March 14, 1936. Entries close, February 8, 1936. Particulars and entry forms from the Hon. Secretary, Eric H. Bellamy, Waterloo House, 20, Waterloo Street, Birmingham, 2.

City of London and Cripplegate Photographic Society.—Thirty-first Annual Photographic Exhibition from March 16–21, 1936. Entries close, February 10, 1936. Particulars and entry forms from the Hon. Exhibition Secretary, A. C. Mundy, 11, Monkham Lane, Woodford Green, Essex.

London, Midland and Scottish (London) Photographic Society.—Eleventh Annual Exhibition of Pictorial Photography at Euston Station, London. Open, March 16–21, 1936. Particulars and entry forms from the Hon. Exhibition Secretary, Clarence Pursell, Chief Accountant's Office, L.M.S. Railway Co., Euston Station, London, N.W.1.

VIIe Salon International D'Art Photographique de Bruxelles, 1936.—Open from March 21–April 5, 1936. Entries close, February 25. Particulars and entry

forms from M. M. Devaivre, 152, Rue Markelbach, at Brussels, 3, Belgium.

Hackney Photographic Society.—47th Annual Exhibition. Open, April 1–4, 1936. Entries close, March 10. Particulars and entry forms from the Hon. Secretary, Walter Selfe, 24, Pembury Road, Clapton, London, E.5.

Darwen Exhibition of Photography.—April 20–May 2, 1936. Entries close, March 19. Particulars and entry forms from the Secretary, J. H. Woods, South Down, Bolton Road, Darwen.

Bristol Photographic Society.—Second Annual Open Exhibition, from May 2–19, 1936. Entries close, March 28. Particulars and entry forms from the Hon. Exhibition Secretary, Percy V. Cave, 36, Coldharbour Road, Redland, Bristol, 6.

Sunday Referee Weekly Photographic Competition.—£10 offered every week for the best picture published. See Sunday Referee for full particulars.

Seventh Chicago International Salon of Photography.—Open, July 23–October 4, 1936. Entries close, June 15, 1936. Further details and entry forms from Alex. J. Krupy, Chicago Camera Club, 137, North Wabash Avenue, Chicago, Illinois, U.S.A.

I Internationale Kunstphotographische Ausstellung in Karlsbad.—Open from July 18–August 9, 1936. Entries close, June 18, 1936. Particulars and entry forms from Mr. Hugo Heyer, Schulgasse 26, Karlsbad.

## Christmas Suggestions— THE PERFECT CHOICE

There is no finer value than the **NORFOLK**  
Cameras and **AMPRO** Ciné Projectors

### AMPRO PROJECTOR MODEL K—750-watt.

The finest 16-mm. projector available at an attractive price.  
Superior construction, perfect projection, simple to operate. All controls are conveniently placed immediately in front of the operator, consisting of—forward, reverse, efficient speed control.  
Separate lamp switch enabling films to be rewound without using the light, and in 40 seconds only for 400 ft.

Finished in superior bronze.

Price £42 : 10 : 0

**MODEL KD**, similar to above in construction, but with larger aperture lens and super aspheric condensers, giving maximum light efficiency, and pilot light..... £48 0 0

**MODEL J**, 500-watt..... £37 10 0

### NORFOLK—MINIATURE MODEL

The perfect miniature camera at a most reasonable price. Well designed and constructed, self-erecting, takes standard 3½×2½ film, 16 pictures 4½×6 cm. Automatic film window covers for use with pan. film. F/2.9 Schneider Radionar, Compur D.A. shutter

£6:15:0

Or 9 monthly payments of 15s. 8d.

New fitted also with new type Compur, speeds up to 1/400th.....

£7:19:6

Or 9 monthly payments of 18s. 7d.

### NORFOLK—ROLL-FILM MODEL (Not illustrated).

3½×2½ Roll Film Model, also with interchangeable masks for 16 pictures 4½×6 cm. Fitted with automatic covers on film windows for use with pan. films. Ingenious clear-type finder with auto-matic spring mask for half-picture size. Sturdily constructed, neat design. F/3.8 Zernar, Compur delayed-

£6:6:0

action shutter.....

Or 9 monthly payments of 14s. 6d.

### A FEW RICH CAMERA BARGAINS

3½×2½ Newman & Guardia Folding Reflex, f/4.5 Ross Xpres lens, 2 D.D. slides, F.P. adapter, Dallmeyer Dallon f/5.6 Telephoto lens 10-in., leather case..... £25 0 0

3½×2½ Zeiss Ikon, f/3.5 Tessar lens, Compur D.A. shutter, rising and cross front, double extension, 3 slides, F.P. adapter, Distar lens. Just as new. List price £22 10s..... £15 15 0

Rolleiflex 6×6, f/3.8 Tessar lens, colour filter, ever-ready leather case. As new..... £18 0 0

4-pl. Revolving Back Tele-Graflex, f/4.5 Ross Xpres lens, 6½-in. focus, 6 D.D. slides, F.P. adapter, Graflex cut-film magazine, roll-film holder, leather case..... £13 13 0

Rolleiflex (Non-automatic) 6×6, f/3.8 Zeiss Tessar lens, ever-ready leather case, release £9 9 0

Rolleiflex (Non-automatic) 6×6, f/3.8 Zeiss Tessar lens, Compur shutter, set of Proxar lenses, leather case..... £11 11 0

Retina Camera, takes 35-mm. cine film, f/3.5 Schneider Xenar lens, Compur shutter, leather purse £3 8 0

Foth-Derby 16-on-V.P., f/3.5 Foth anastigmat lens, focal-plane shutter..... £3 15 0

Ikonta Camera 16 on 120, f/4.5 Novar anastigmat lens, Telma D.A. shutter, release, suede purse £4 17 6

# Amateur Cinematography

NEWS, NOTES AND MATTERS OF INTEREST FOR ALL CINEMATOGRAPHERS USING AMATEUR CINÉ APPARATUS.

## Making the Christmas Document Film

By "ACTINOGRAPHIST."

MANY amateur cinematographers—especially those whose experience is more casual than serious—appear to regard the word "documentary" as just a more dignified term for the rather aimless efforts which some of us are apt to favour in our early days of camera work.

Nothing, however, could be farther from the truth, for whilst those earlier efforts are little more than "straight" photography the true document is a serious effort involving: (1) the "construction" of effects; (2) the dramatisation of simple incidents; (3) the creation of suspenses and climaxes by means of special cutting.

This being so, our Christmas film should be commenced only after two or three days of careful planning upon these lines.

And here it becomes necessary to look around for "material" and to explore all possibilities for effective shooting. These should then be planned into some form of treatment that will imply a logical design; a rough shooting-script should be prepared and the actual shooting carried out round about the Christmas days.

Cutting and constructive assembly are matters apart from these—for always the object of editing should be to make the most effective use of shots supplied by the camera.

### Good Material.

In most cases there will be a shortage of good material—though some of us will be entertaining the special assembly of particular friends, whilst others will themselves be travelling away to an equally congenial gathering. In either case, there will be the festive dinner, the distribution of presents, the display of greeting-cards and a deal of other suitable material to be considered.

This, then should be kept prominently in mind—in order that selected incidents only may form the high-spots of our festive film. But, before this, the film must have a beginning; a beginning that is good, a beginning that will arouse stirring interest from the very opening shots.

The pun is not intentional, but what about the pudding-making? What about the preparations for Christmas, and what about the tireless energy they involve? Decidedly, we must not forget those who have worked "behind

the scenes" to make the Christmastide happy for us; and this is just the place for a permanent recognition of their spirited efforts.

After the mixing of the puddings, we may show the boiling of them; nor should we forget to include a short dissolve from each of these shots immediately before that showing the actual serving of this *pièce de résistance*. And the turkey; in his own way he is a greater hero than the pudding—but having decided to accentuate the latter, we must judiciously avoid including any shots of the bird prior to his arrival at table.

### Party Games.

At this point, it is advisable to include the first close-ups of the dinner-party (panning slowly and intermittently from one guest to another). The close-ups should not be assembled *en bloc*, as they are far more effective if inserted in groups of two or three pans—the continuity being established by having the

subject of one close-up turn to speak to the next subject as he or she is introduced.

It is at the dinner-table, too, that the ever-popular Christmas games have their real beginning. Some of us may be fortunate enough to take part in that old and exciting game of snapdragons. This, as well as the cracker frivolities, is always rich in incident and can be made the subject of close-ups, medium shots and even short tracks.

But care should be taken here to avoid turning our Christmas document into a mere record film. The one great essential is to include as many shots of a dramatised nature as possible. Thus, for example, suspenses should be created by the insertion of long close-ups of those guests only passively concerned with the incident of the moment, whilst briefer shots and even flashes should be used to heighten the effect of the high-spots and all characters connected with them.

The pavement toy-shop. This well-known and popular feature of certain London streets at Christmas offers an excellent action subject for the amateur cinematographer.

Before working up to the climax of the evening games, it is helpful to prepare a contrast by including full-footage shots of the less boisterous action. Such action is found in the annual showing-off of snapshots and Christmas cards from absent friends; and in special cases should be taken to include big close-ups of the cards or photographs as they are held in the hand.

Some rather amusing games are identified in the tricks played by practical jokers upon their fellow guests—usually at bedtime and after the more general amusements have come to an end. It is quite permissible in any documentary film to "prepare" incidents such as these; and full advantage should be

taken of any assistance that may be available for the preparation of "apple-pie" beds, "blind" pyjamas, and other such frivolities.

Other and suitable Christmas incidents will commend themselves to the majority of camera-men, though all may discover an original touch in the tipping of tradesmen and others—that event which is in most places general and which gives its name to Boxing Day.

#### Films and Materials.

Since most of our work will require to be performed within doors, only the fastest films and equipment should be selected for the work of shooting. Super-speed panchromatic is, of course, eminently suitable here, whilst wide-aperture

lenses and possibly the half-speed intermittent will also have an opportunity of proving their worth.

Lighting is likely to present certain difficulties to those not accustomed to indoor working, but here again much valuable assistance is available in the form of home lighting accessories which are provided at moderate cost by the manufacturers. In this connection, it is well to remember that long shots—which are not very effective in this type of film—require a tremendous amount of light by comparison with that required for other shots.

And always it may be assumed that efficient reflectors can do much to compensate for a real shortage of brilliant illumination.

## Two Shows for Christmas

By  
SIGURD MOIR.

AT this time of the year the energies of all amateur projectionists are more or less concentrated upon preparing to give "the show of the year." Old friends and honoured guests will be assembled, too, to bestow their plaudits or temper their criticisms in the true spirit of the festive season.

Not that it is in the best interests of the hobby to have all criticisms stifled. Far from it. But at this period of the year we can afford to indulge our guests by relinquishing several of the things that in normal times would be good for us.

One of the most important things we can waive is our desire always to show films which, *as films*, are worth showing. Quite a number of people (apart from film writers) have yet to be enlightened as to what constitutes a good film. Certainly many of the professional boosted "triumphs" are not good films; but they are easy entertainments—and for this reason we can do worse than book one of these for display to our Christmas guests.

#### Library Films.

The professional library reductions are, however, very much of a sameness, it being difficult to prefer some over a great number of others. Nevertheless, recent additions are usually better made than older films—if we exclude such masterpieces as "Dreigroschenoper," "The Blue Light," "Caligari," and "Vaudeville," and it is therefore reasonable to suppose that the new releases will generally give greater satisfaction than the earlier numbers.

With regard to the arrangements for this first of our two shows, it is not desirable for the display to occupy the whole evening. The time for giving the real Christmas show should surely be on Boxing Night, and it may be better to regard this preliminary exhibition not so much as a show as the ciné amateur's contribution to the evening's games and variety entertainment.

To this end, no film other than the selected library feature should be put on. Most guests will appreciate the

arrangement, and, in any case, the projection of popular rubbish will be no great fun for the amateur who likes to regard filming as something more than the mere photography of transcribed novels and stage-plays.

#### The Big Show.

For the real and major display of films most enthusiasts will want to show the best of their own and their fellow cinematographers' work. And there is a fair amount of this good work (far more than the recent exhibitions would suggest) available.

The show should commence with a one- or two-reeler "documentary"—which should not be difficult to obtain, since the Kodascope and other libraries possess several of the right kind which have been acquired from amateur and other enthusiasts. Nor should it be forgotten by members of the serious societies that their organisation will probably possess copies of certain exclusive documentaries that have never been offered to the libraries. As an example of the value of this service, the writer need only mention that he was once able to secure 16-mm. copies of "Moana" and "House of Usher" in this way.

It is tolerably certain that great difficulty will be encountered in obtaining the loan of recent amateur documentaries. These films are extremely popular in advanced circles, all the available copies of "En Fête," "Farm Documentary," "Element" and the best of the 1935 vintage being booked out for weeks ahead.

And even the lesser productions will enjoy to capacity the Christmas favour of their fond sponsors.

#### Other Films.

Second on the big show list may come a Chaplin comedy. Chaplin was able to impart some of his brilliance to the content of mute "slapstick" films; and brilliance in film creation is definitely the chief aim of those whom the B.F.I. regards as the *avant garde* section of the amateur movement.

Next to the comedy should come the "high spot" of the evening—the selection of family films. The fact that these have always an insuppressible appeal to Christmas guests tends rather to nullify any cinematic excellence that the films may possess. At the same time, all but obvious faults are prone to be overlooked. For this reason—particularly if many of the guests have not seen them before, films of a quite early vintage, if they are not too bad, can be successfully shown at this juncture.

After the family appeal in these films, good titling is most effective. It is advisable, then, as early as possible, to run through the selection and see that this is brought into continuity and made more attractive through the addition of suitable titles.

The show may be rounded off with the finished version of last year's Christmas film or the best production from the worker's own camera.

#### Final Note.

Where the amateur does not yet indulge in any camera activities, the main and concluding films will have to be borrowed. In this case, an early visit to the library is suggested—for, despite the heavy duplication of good subjects, many films are entirely booked out long before the last-minute rush. In fact some of the most popular subjects are booked for Christmas as soon as they are announced earlier in the year.

Provided it falls within the category of good cinema, any subject likely to appeal to our guests may be selected as the main feature. Here the silly photoplay should be avoided—not merely because it may have been exhaustively shown at the public theatres, but rather because every effort should be made to keep the quality of the show as high as possible.

The "Felix" and other cartoon animations are frequently in the highest category of film—and one of these may safely be selected to conclude the performance.

For the rest, good screening—and . . . no breakdowns!

# YOUR BEST XMAS ENTERTAINMENT

THE NEW

## PAILLARD — Bolex G.3

MODEL

The only projector taking three film sizes.

### 8-mm. 9.5-mm. 16-mm.

Think of the increased scope and fun you'll get with this new Bolex at Xmas. With it you can show your own or your friends' films—it doesn't matter which of the three film sizes they are the model G.3 will show them with the brilliance and perfection for which the Bolex is famous. ... AND THE

*"Celfix"*

**SCREEN**

**FOR THE BRILLIANT MOVIES IT SHOWS  
AND THE LASTING SERVICE IT GIVES**

Although Celfix costs a little more in the first place, it is cheapest in the long run. With the strain of continually rolling and unrolling, inferior materials soon show signs of wear. Creases and small patches of bare surface appear, giving a very indifferent result from even your best films. With Celfix this cannot happen. The special formula by which Celfix crystal-glass beaded surfaces are made ensures the high standard of the first show being maintained after years of use. The Celfix is portable and self-erecting. It rolls tightly into neat art leather-covered case which forms the base stand. No strings or wires can come in contact with the surface. Get a Celfix for Christmas!

Stock sizes, 27" x 20" to 96" x 72". Silver from 70/-. Crystal-glass beaded from 90/-. Sizes up to 13' x 10' to order.

Next Issue—Monday, December 16th.

Tunbridge Wells A.P.A. Members' Slide Competition.  
York P.S. "A Talk on the Leica Camera." H. L. Kettle.

# Readers' Questions ANSWERED

**GENERAL.**—All communications for the Editor should be addressed: "The Editor, *The Amateur Photographer and Cinematographer*, Dorset House, Stamford Street, London, S.E.1," and in every case, without exception, must give the name and address of the writer.

**CONTRIBUTIONS.**—The Editor is glad to consider original up-to-date manuscripts on photographic subjects. All contributions must be typewritten, or in very legible handwriting on one side of the paper only. Letters or communications arising out of matters already appearing in the paper are not paid for. The Editor disclaims legal responsibility for the safety of matter submitted to him, but he will endeavour to return rejected manuscripts, etc., when a stamped addressed envelope is enclosed. MSS. or prints that are not actually accompanied by a stamped wrapper or envelope can in no case be returned. Reproduction fees for prints are only paid by arrangement beforehand. The sending of a print, without any condition stated, will be taken as permission to reproduce it without fee.

**ENQUIRIES AND CRITICISM.**—Advice, Criticism and Information are freely given, but the following conditions should be read carefully before applying, as any communication which does not comply with the rules must be ignored.

(1) See "General" above. (2) Every question and every print for criticism must be sent separately through the post, and must be accompanied by a separate stamped addressed envelope. No exception can be made in any case to this rule, except so far as enquiries or prints from Overseas are concerned. (3) Neither enquiries nor prints for criticism must be enclosed with competition prints. (4) On the back of each print sent for criticism, in addition to the name and address of the sender, must be the title (if any), and the criticism coupon from the current issue. (5) Enquiries should be clearly written, on one side of the paper only, and should be specific and not general. Such enquiries as "How can I take interiors?" or "Can you give me some hints on outdoor portraiture?" are too general to be dealt with in this section. (6) All envelopes should be distinctly marked "Query" or "Criticism," as the case may be. (7) Prints are sent for advice or criticism on the distinct understanding that by so doing permission is given for their reproduction without fee. We endeavour to deal promptly with enquiries, but cannot undertake to answer by return of post, nor can we give precedence to any enquiry.

A selection of those replies is printed each week, but all questions are answered by post. Enquiries from abroad must contain a coupon also, but it need not be from the current number, and should be cut from the latest issue to reach the enquirer.

## Development for Under-Exposure.

What is the best developer and treatment to use on a negative that is known to be greatly under-exposed?  
J. G. (Norton-on-Tees.)

There is no real remedy for serious under-exposure. The best plan is to use a soft-working developer, such as metol, without bromide, or such a concentrated developer as Azol. With a diluted solution sufficient time should be given to bring out all possible detail, and it would then probably be necessary to intensify the negative. Development should be conducted in the dark to avoid any possibility of fog, which would be fatal where the developing action is forced. The temperature of the solutions should not be below 65° Fahr.

## Making an Enlarger.

Can you give me details on how to make a vertical enlarger suitable for miniature negatives?  
D. L. (Edgware.)

We frequently have to point out to readers that it is quite impossible to give any useful details about making an enlarger within the limits of a reply. We are publishing information on points connected with this matter from time to time in our weekly beginners' article.

## Camera for a Beginner.

I would like to purchase a folding roll-film camera suitable for a novice but am perplexed by the big differences in prices. Can you advise me on a type that is not too complicated?  
F. E. H. (York.)

The question you put does not admit of any definite answer. We had a series of beginners' articles recently in which it was clearly explained that some of the best pictures are made with quite simple and cheap cameras. Of course, there is a great difference in the price of even similar cameras, and you may take it in a general way that higher

price represents better value, but it does not follow that in inexperienced hands an expensive camera will take better pictures than a cheaper one. As you say you know very little about photography we think you would do well to start with a fairly simple, reasonably priced camera, say a  $3\frac{1}{2} \times 2\frac{1}{2}$  roll-film camera with an  $f/4.5$  lens and a speeded shutter. You should get a thoroughly good one for a price round about £5.

## Duplicates of Lantern Slides.

How can I best make a duplicate slide from another lantern slide?  
C. R. (London.)

If you like to unmount the slide you can make a negative on an ordinary plate or film by contact printing, and from this negative you can afterwards make a slide also by contact. The only difficulty will be to retain all the gradations of tone of the original slide.

## Projectors as Enlargers.

Is it possible to use a lantern-slide projector as an enlarger? If so, are there any alterations to make?  
G. G. (Surrey.)

Many optical lanterns can be used quite successfully for enlarging, and without any great alteration. The diagonal of the negative must not be greater than the diameter of the condenser, and you must make a carrier for your negative that will keep light from leaking out around it. Whether the lens will give sufficiently good definition without stopping down is a matter that can only be ascertained by experiment.

## Valuation of Apparatus.

Could you advise on an approximate price for a camera that I propose to buy? The details are appended.  
L. M. (Oxford.)

In no circumstances do we attempt to value apparatus. Moreover, no valuation would be reliable except after careful personal examination of the apparatus.

## Dry-Mounting.

Can you give some hints on using an electric flat-iron for dry-mounting enlargements?  
F. S. (Golders Green.)

The important point about dry mounting with an electric iron is to keep the temperature right. It should be about that of boiling water. You should take care that the print is quite dry before applying the iron, and it is well to cover the print with a sheet of clean paper while applying pressure. The adhesive tissue between the print and the mount is melted by the heat of the iron when pressure is applied in one place at a time, and not by sliding the iron about with the action usually adopted in ironing.

## Acid Fixing Bath.

Does the use of an acid hardening fixing bath have any adverse effect on any after-process that may be applied? Does the metabisulphite used for removing the bright green bleaching colour in the chromium intensifier also have any after-effect?  
E. B. (Camberley.)

Such a bath as you name hardens the negative as well, and this will somewhat slow down any future treatment. If you wash the negative thoroughly before using chromium the colour of the bleached image is yellow and not green, and this stain can be removed by sufficient washing, even in plain water.

## Focussing Distances on the Camera.

Do the focussing marks on the camera scale indicate the distance from the object to the lens or to the focal plane of the lens?  
W. E. W. (E. Dulwich.)

It is usually understood that the distance you refer to is measured from lens to object, and this is invariably the case when so-called magnifiers for specified distances are put on the lens. When a range-finder is fitted it is adjusted specially to the camera.

## Lens Deterioration.

The back cemented component of my anastigmat lens appears misty by transmitted light, and cannot be cleaned. Does this indicate that the cementing compound used is deteriorating?  
R. S. (London.)

It is quite possible that it is the cement of your back lens that has deteriorated, and, if so, the only course is to send it to the makers or a reliable optical firm to have the glasses separated and recemented. You will find at least one such firm advertising in our columns. We are not in a position to quote the price, but the firm will no doubt do this on request.

## Keeping Qualities of Developer.

For economy reasons, I divided up the powders of a concentrated developer for bromides before mixing, but find that the solution has not kept fresh in colour after only slight use, as it is advertised to do. Will this affect further use?  
L. A. (Southsea.)

Developers of the class you mention change considerably in colour when in solution, but, within reason, their activity is not impaired. Although we have used the developer we have not had occasion to keep it for any length of time, and so cannot speak with knowledge of its keeping qualities. Perhaps it would be well for you to put the case to the agents for this developer, and ask for their guidance as to keeping quality.

# THE SERVICE COMPANY YOUR PHOTOGRAPHIC AND CINÉ DEALER

Offers All Modern Apparatus, New and Second-hand.

## XMAS SUGGESTIONS

### PATHÉSCOPE POPULAR 200-B

With scientifically placed 200-watt lighting. Brilliant picture 10 ft. wide obtainable. Flickerless projection, sprocket fed. Single nut tilting device. Works off any voltage. Complete with lamp, plug, flex, two-way adapter and one empty 300-ft. super reel and variable resistance.

Price  
**£16:15:0**

Or 12 equal payments of £1 9 3 per month.

### NEW HIGH-SPEED NETTAR

By ZEISS IKON.

For 3½×2½ roll film. Self-erecting front, f/3.5 Nettar anastigmat lens in focussing mount, Compur delayed shutter, 1 to 1/4000 sec., T. and B., D.V. and brilliant finders.

Price **£9:10:0**

Or 12 equal payments of 16s. 6d. per month. De Luxe Leather Case, extra..... 8s. 6d.

### "SERVICE" REFLECTOR For Home Portraiture.

For screw-fitting lamps.  
12s. 6d.  
Special Neron 200-watt  
Lamp..... 7s. 6d.  
300-watt..... 12s. 6d.  
500-watt Lamp, extra,  
£1 0 0

State voltage.

### "SERVICE" WOOD TRIPOD

53 in. high.

Ideal for Reflex or Cine Cameras. Adjustable sliding legs, with clamping screws and T-screws. Post 4d.

Price, each..... 4s. 9d.

### "SERVICE" PROFESSIONAL TRIPOD AND TOP

Cine-head Pan., Tilt, etc., 16s. extra. For half or whole plate cameras. Three-fold, 58-in. high, 18 in. closed

Price 18s. 6d.

### TO CINÉ ENTHUSIASTS

"HOME MOVIE WORLD," sent post free. Obtainable only from The Service Co.

SECOND-HAND—BUT IN GOOD CONDITION.  
All known makers.

16-mm. 400-ft. REELS. Partly used.  
3 for 4/6. Post 6d. extra.

### BOLEX NEW "G.3"

Will project with equal efficiency all three sizes of films, i.e., 8-mm., 9.5-mm. and 16-mm. One hundred per cent gear driven. Rock-steady and absolutely flickerless pictures. Enormous intensity of screen illumination (500-watt lamp). Ready for 110-volt mains .... **£60**

Resistance for high-voltage ..... **£2 10 0**

### THE YEAR'S BEST 9.5-mm. 15/- Cine Film BARGAIN, per reel

PATHE 9.5-mm. SUPER FILMS  
COMPLETE ON SUPER SPOOLS

All in condition equal to new. Obtainable only at the Service Co.

### Displayed Advertisements

Communications on Advertisement matters should be addressed: The Advertisement Manager, "The Amateur Photographer and Cinematographer," Dorset House, Stamford Street, London, S.E.1. Copy for displayed advertisements for the issue of any particular week must reach Dorset House by the first post on Tuesday morning in the week previous. Rates and conditions will be sent upon application.

### Prepaid Advertisements

SALE AND EXCHANGE: AMATEURS ONLY—

12 words or less ..... 1/-  
1d. for every additional word.

PROFESSIONAL AND TRADE:—

12 words or less ..... 2/6  
2d. for every additional word.

Each paragraph is charged separately.

SERIES DISCOUNTS are allowed to Trade Advertisers as follows on orders for consecutive insertions, provided a contract is placed in advance, and in the absence of fresh instructions the entire "copy" is repeated from the previous issue: 13 consecutive insertions, 5%; 26 consecutive, 10%; 52 consecutive, 15%.

All advertisements inserted in these columns must be strictly prepaid and posted to arrive at the Head Office, Dorset House, Stamford Street, S.E.1, not later than first post FRIDAY for the following week's issue, or one day earlier at the Branch Offices, 19, Hertford Street, Coventry; Guildhall Buildings, Navigation Street, Birmingham, 2; 260, Deansgate, Manchester, 3; 266, Renfield Street, Glasgow, C.2.

Advertisements are inserted, as far as possible, in the order received, and those received too late for one issue, or crowded out, are published in the first following in which there is space. The Proprietors retain the right to refuse or withdraw advertisements at their discretion.

Postal Orders sent in payment for Advertisements should be made payable to ILIFFE AND SONS LTD., and crossed

& Co.

Notes being untraceable if lost in transit, should not be sent as remittances.

The Proprietors are not responsible for clerical or printer's errors, although every care is taken to avoid mistakes.

BOX NUMBERS.—For the convenience of advertisers, letters may be addressed to numbers at the office of this paper. When this is desired, the sum of 6d. to defray the cost of registration and to cover postage on replies must be added to the advertisement charges, which must include the words: "Box 000, c/o 'The Amateur Photographer'." Replies should be addressed: "Box 000, c/o 'The Amateur Photographer,' Dorset House, Stamford Street, London, S.E.1," and these letters will be simply forwarded by us to the advertiser. It must be understood that we do not deal with the correspondence in any other way, nor accept any responsibility in connection with the advertisement. Readers who reply to Box No. advertisements are warned against sending remittances through the post except in registered envelopes. In all such cases the use of the "Deposit System" is recommended.

### Special Note

Readers who reply to advertisements and receive no answer to their enquiries are requested to regard the silence as an indication that the goods advertised have already been disposed of. Advertisers often receive so many enquiries that it is quite impossible to reply to each one by post. When sending remittances direct to an advertiser, stamp for return should also be included for use in the event of the application proving unsuccessful.

### Deposit System

Readers who hesitate to send money to advertisers in these columns may deal in perfect safety by availing themselves of our Deposit System. If the money be deposited with "The Amateur Photographer and Cinematographer," both parties are advised of its receipt. The time allowed for decision is three days, counting from receipt of goods, after which period, if buyer decides not to retain goods, they must be returned to sender. If a sale is effected, buyer instructs us to remit amount to seller, but if not, seller instructs us to return amount to depositor. Carriage is paid by the buyer, but in the event of no sale, and subject to there being no different arrangement between buyer and seller, each pays carriage one way. The seller takes the risk of loss or damage in transit, for which we take no responsibility. For all transactions up to £10 a deposit fee of 1/- is charged; on transactions over £10 and under £50 the fee is 2/6; over £50 and under £75, 5/-; over £75 and under £100, 7/6; and on all transactions over £100, one-half per cent. All deposit matters are dealt with at Dorset House, Stamford Street, London, S.E.1, and cheques and money orders should be made payable to Iliffe and Sons Ltd.

## IMPORTANT NOTICE

Owing to the Christmas Holidays, the issue of "THE AMATEUR PHOTOGRAPHER & CINEMATOGRAPHER" for December 25th must be closed for press earlier than usual.

MISCELLANEOUS ADVERTISEMENTS for insertion in that issue can be accepted up to FIRST POST, WEDNESDAY, DECEMBER 18th.

## WARNING

We have received many complaints from our readers in regard to the business methods of Mr. R. L. Green, trading as R. L. Green's Photographic Exchange, of 218, Fore Street, Edmonton, London, N.18, or (possibly with different initials) as Cine Photo Supplies, 4, Holborn Place, High Holborn, W.C.1.

For some considerable time we have refused to insert his advertisements in "The Amateur Photographer and Cinematographer," and from the complaints we have received it would appear that his practice is to communicate with private advertisers having goods for sale, offering to take such goods in exchange for others, or to purchase for cash. Readers are advised to ignore all such offers from this quarter.

## CAMERAS AND LENSES

SOME Good Bargains in cameras and accessories; stamp for particulars to—White, Senlac Gardens, Battle, Sussex. [1721]

ROLLEICORD, f/4.5, Compur, leather case; R brand new condition, £7.—Blake, 39, Mellows Rd., Wallington. [1722]

**AT LAST!**

**A DAYLIGHT-LOADING**  
Developing Tank for Leica  
and other 36-exposure film is obtainable

**The Superkino**

is the only Developing Tank in the world in which 36-exposure Leica or other film, whether in Cassettes or Patrones, can be developed in FULL DAYLIGHT. No rollers. No aprons. No spare parts. Developing, fixing and washing in daylight. The Tank is constructed entirely of bakelite, therefore proof against acids, almost unbreakable, and easy to clean.

Price £3 : 3 : 0 complete.

Ask to see this Tank at your nearest dealer, or write for full particulars to

# "You must snap Bobby with his new engine"

—said Bobby's Mother

**S**O, on Christmas Eve, his father went to the nearest Kodak Dealer, and got some spools of **Kodak Super Sensitive Panchromatic Film** and some simple inexpensive **Kodak Lighting Aids**. Then, in the evening of Christmas Day, he was able to get some perfect pictures without even stirring out of the dining-room.

**X** Put down **KODAK "S.S. PAN" FILM** and the **KODAK LIGHTING AIDS** on your Christmas Shopping List

## How this picture was made.

Two "Photoflood" Lamps in "Kodaflector" Reflectors provided the light, as shown in diagram. The exposure was  $\frac{1}{15}$ th second at 14.5 on Kodak Super Sensitive Panchromatic Film.

Ask your Kodak dealer or write to Kodak Limited, Kodak House, Kingsway, London, W.C.2 for free illustrated booklet entitled: **"HOME SNAPSHOTS AFTER DARK THE EASY KODAK WAY"**

Edited by F. J. MORTIMER, Hon. F.R.P.S., Editor of "The Amateur Photographer and Cinematographer"

"Photograms of the Year" for 1936 is now on sale and makes a most attractive volume for all who are interested in pictorial art.

Selected from the best work of the world's leading photographers, this volume reveals the remarkably wide range of subject matter that comes within the scope of the modern camera artist.

Still-life, landscape, portraiture, posed figures, architecture, and the artistic interpretation of apparently commonplace detail, are all presented with consummate taste and technical skill.

Obtainable from leading Booksellers, or direct from the Publishers

ILIFFE & SONS LTD., DORSET HOUSE, STAMFORD STREET, LONDON, S.E.1

## A CHARMING CHRISTMAS GIFT FOR ART LOVERS

PLEASE MENTION "THE AMATEUR PHOTOGRAPHER" WHEN CORRESPONDING WITH ADVERTISERS.

# CHOOSE YOUR GIFTS FROM ONLY A FEW SHOPPING DAYS BEFORE CHRISTMAS—ACT

## PATHE 'B'

A popular movie maker with f/3.5 lens and clockwork motor. Simple to use  
**£6:6:0**

Nine monthly payments of 14/9.

## 9.5-mm. DEKKO

Three speeds—half, normal, slow. For snapshots, time exposures, single and animated.  
**£6:6:0**

Nine monthly payments of 14/9.

## KODAK "RETINA"

Daylight loading with Kodak 35-mm. film cassettes. F/3.5 lens and Compur shutter  
**£10:10:0**

Nine monthly payments of 24/6.

## ROLLEICORD

The twin-lens camera which makes a popular Xmas gift. Has Compur shutter and Zeiss Triotar f/4.5 lens  
**£11:15:0**

Nine monthly payments of 27/5.

*I can recommend any of these..*

## 'BRILLIANT'

Takes the standard 3 1/2 x 2 1/4 8-exposure roll film. With Compur shutter, f/4.5 Skopar lens  
**£5:15:0**

Nine monthly payments of 13/5.

## ROLLEIFLEX

With f/3.5 Zeiss Tessar and Compur shutter. The fastest roll-film mirror reflex  
**£25:0:0**

Nine monthly payments of 58/4.

## "IKOFLEX"

12 pictures on 8-exposure 3 1/2 x 2 1/4 roll film. Large finder lens. Novar f/4.5 lens and Ikoflex shutter  
**£7:15:0**

Nine monthly payments of 18/6.

## KODAK 'DUO'

Takes 16 pictures on 3 1/2 x 2 1/4 roll film. With Pronto shutter and f/4.5 lens..  
**£6:0:0**

Nine monthly payments of 14/1.

## VICTOR MODEL '5'

A splendid ciné camera with 4 speeds and slow motion. With 1/2.9 Dallmeyer lens  
**£45:0:0**

Nine monthly payments of £5 5 0.

## SALEX TRIPOD

A first-class job for cine-users. Get one for your friend...  
**£5:15:0**

Nine monthly payments of 13/5.

## NEW 'CONTALEX'

The first real twin-lens miniature reflex camera taking perforated ciné film, and the first with built-in photo-electric exposure meter. Focusing screen shows picture twice the size recorded on negative. With interchangeable Zeiss lenses. Picture size 23 x 36 cm. With Zeiss Tessar f/2.8 2-in. lens  
**£64:12:6**

Nine monthly payments of 27 10 10.

GENEROUS EXCHANGE ALLOWANCE  
ON YOUR PRESENT APPARATUS.

## FILMO '8' PROJECTOR

Traditional Bell-Howell quality in the 8-mm. field. Has 400-watt lamp. Fitted with fast f/1.5 projection lens. Takes 200-ft. films. For all voltages  
**£41:0:0**

Nine monthly payments of 95/8.

## NEW WESTON Meter

Gives lower light values. Simpler to use, smaller, and has expanded instruction book. It includes the famous photonic light cell, and narrow angle of view. Universal for still and ciné work  
**£5:19:0**

Leica meter, specially for Leica users  
**£5 19 0**

Nine monthly payments of 13/11.

Case 10/- extra.

## SUPER IKONTA

Model No. 530/16.

Takes 12 pictures on 3 1/2 x 2 1/4 8-exposure roll film. Distance meter coupled with the focusing. Direct built-in view-finder. Compur Rapid shutter, speeded to 1/400th sec.

With f/3.5 Zeiss Tessar lens.....  
**£25:5:0**

Nine monthly payments of 59/-.

## SPECIAL CHRISTMAS

16-mm. Bronze Kodascope Model B, reverse, rewind and still picture movement. As new. List price £35.....  
**£45 0 0**

## QUICKLY AND AVOID DISAPPOINTING ANYBODY!

### SEND FOR CHRISTMAS FOLDER

Fully illustrated and with all specifications of Cameras, Ciné Cameras, Home Cinés and lots of very useful accessories which make ideal Xmas gifts. Free and post free!

**EASY TERMS**  
Anything on 9 equal  
monthly instalments.  
First payment secures  
the goods.

### AGFA MOVECTOR DOMESTINO

Takes 400-ft. reels of 16-mm. film. Built-in resistance. 100-watt lamp. 50-mm. £17 lens ..... £17  
Nine monthly payments of 39/8.

### THE 'AVO' METER

Gives direct reading for still and cine cameras. ONLY 57/6  
Case 5/- extra.

### SALEX BALDA

16 pictures on 3½×2½ roll film. 1/4 F/2.9 Meyer lens, delayed-action Compur sector shutter, 1 to 1/3000th sec. £9 : 5 : 0  
Nine monthly payments of 21/8.

### OMBRUX METER

The photo-electric light-cell exposure meter. Gives dead-accurate exposures. For still cameras £4 : 4 : 0  
Nine monthly payments of 9/11.

### CONTAX

The famous Zeiss Ikon miniature camera with Zeiss Tessar 1/3.5 lens and focal-plane shutter ..... £31  
Nine monthly payments of 72/4.

### KODAFLECTOR

For taking movies at the Xmas Party. With reflector and wire stand for standing it on chair or table or suspending from picture-rail. With 9-ft. flex and adapter. 7/6

### Pathoscope 200-B

The finest 9.5-mm. projector available. 200-watt lamp. Complete with accessories £15  
Nine monthly payments of 35/-.

### KODASCOPE 'EIGHT-80'

Complete with two 200-ft. reels, splicing outfit and accessories ..... £25  
Nine monthly payments of 58/4.

### FILMO STRAIGHT '8'

The smallest Cine Camera in the world.

Daylight loading. Takes 30-ft. spools of film. Built-in exposure chart, 4 speeds. With 1/2.5 lens. £19 : 15 : 0

Nine monthly payments of 46/1.

### VOIGTLANDER BESSA

Takes 8 exposures or 16 exposures on 3½×2½ roll film when required. With 1/4.5 lens and Compur shutter.

£7 : 5 : 0

Nine monthly payments of 17/-.  
Every Voigtlander Camera in stock.

### ENSIGN SILVER JUBILEE 'MIDGET' GIFT OUTFIT

Complete in gift box with grey slip leather case.

Model S/33 Ensign Midget, with all-distance lens 33/-

Model S/55, with 1/6.3 Ensign lens 55/-

We have gifts to suit everyone.

### LEICA MODEL III

The finest camera present you could wish to give, absolutely perfect in every detail. Fitted with the remarkable f/2 Summar lens.

£39 : 10 : 0

Nine monthly payments of 92/2.

Every Leica accessory in stock.

### ENSIGN 300-B

Fitted with 300-watt 6-coil single-plane matched filament lamp with matched reflector and condenser. For 16-mm. films. £29 : 10 : 0

Nine monthly payments of 68/10.

# The acme of precision construction...

Approx. two-thirds  
actual size.

THE TRADE MARK OF THE MODERN CAMERA.

is the Contaflex. Only after years of research and experiment have Zeiss Ikon been able to produce the Contaflex. The Contaflex is a new conception in camera design and combines, besides the features of the precision miniature camera for  $24 \times 36$  mm. perforated cine film, of which the Contax is an outstanding example, and the best features to be found in twin-lens reflex cameras, advantages hitherto not applied to any camera construction.

## a design of singular beauty

and practical elegance, the Contaflex will at once appeal to the discriminating miniaturist. Those who know most about cameras and need not compromise with price will be its sponsors.

The Contaflex is the

- First miniature twin-lens reflex for  $24 \times 36$  mm. perforated ciné film, the first camera with
- Built-in photo-electric exposure meter.
- Choice of 6 interchangeable Zeiss lenses, apertures from  $f/4$  to  $f/1.5$ , and focal lengths from 2 to  $5\frac{3}{8}$  in.
- Focussing screen of double picture size, overcomes the difficulty of focussing miniature reflex sizes.
- Built-in delayed-action release.
- All-metal focal-plane shutter accurately speeded from  $\frac{1}{2}$  to a real  $1/1,000$ th second.
- Unintentional double exposures impossible.
- Detachable back for cleaning also permits use of plates by means of plate back.

# Contaflex

Full particulars of the Contaflex will gladly be sent free on request. Most high-class camera dealers stock the Contaflex. Name of nearest dealer on request.

VOL. LXXX. No. 2458.

WILL our readers please note that the next issue of *The Amateur Photographer* (dated Wednesday, December 25th, Christmas Day) will be published and on sale on Tuesday, December 24th. We hope that in spite of the counter-attractions of Christmas itself the topical contents of the issue will not be overlooked. In any case, as indicated in our Special Number last week, there will be plenty of work for the camera during the great winter holiday, and we have every reason to believe that many thousands of our readers will turn their hobby to good account on this occasion. The present issue contains further suggestions.

### Lightning Quickness.

That wizardry has not departed from photography was effectively shown by Mr. A. C. Banfield at the Royal Photographic Society the other day when he took some exposed film, asked his audience to count up to ten, not too slowly, and, presto! there was the transparency developed, fixed, dried, and in the hands of the chairman, who pronounced it very good. Unfortunately, the chemicals or processes used are not yet sufficiently patented to be divulged, but it is understood that this ultra-rapid work is being used in connection with television. Mr. Banfield was asked whether there was any reasonable prospect of this sort of thing being available for the amateur. Will he be able to carry out all his manipulations within a matter of a few seconds? The questioner asked this because, he said, one of the drawbacks to amateur photography—though some would say its particular advantage—was its long and messy operations in the dark-room. The large slice

## TOPICS of the Week

A CHRISTMAS SHOP WINDOW AT NIGHT.

*An attractive subject for the night photographer. An article on Shop Window Photography appears on another page in this issue.*

out of one's leisure time put many people off amateur photography, he said, and if the finished result could appear within a moderate time it would attract crowds more people to the pursuit. Mr. Banfield said in reply that there was some chance of this great boon for the amateur, though he could not promise ten seconds. What would the amateur consider a reasonable time? Would he consider it frightfully slow if developing, fixing, and so on, took up to one minute? The questioner said that he thought amateurs could endure it for one minute, and it seems possible, again when those patents are all right, that a minute may be the maximum that an amateur will have to spend in his dark-room.

### Paying a Debt.

Mr. Kenneth Baker, in his recent discourse to the Pictorial Group, took a rather pessimistic line when he said that there was little demand for the goods produced by the pictorial photographer. He cited the sales record of the major exhibitions in proof. Perhaps the pictorial photographer would rejoin that he is not producing goods for sale, but for his own enjoyment. However that may be, in Mr. Baker's view the pictorialist has either got to find some useful place for himself in the scheme of things or stop producing. The question is what sort of useful place shall the pictorial photographer occupy. A very practical course would be, says Mr. Baker, if the pictorialist would come down from his pedestal, for him to use his knowledge and abilities to improve the deplorably low level of what stands for art in the eyes of the Press and the advertising public. To do so, of course; he would have

to choose his subjects to suit his patrons, who might not care for the sort of subjects with which pictorial photography has exercised itself hitherto. It may be asked why one should assist the Press in this way, but here Mr. Baker has his answer. The amateur photographer must not think that the wonderful materials at his disposal would be there if it were a case of himself alone. He owes them to the Press, the commercial photographer, the professional portraitist, and, above all, the cinema.

### Limelight.

Going to the meeting of the voluntary euthanasia people the other evening we expected an atmosphere of appropriate gloom, but in fact the hall was the most brilliantly lighted we have ever been in. Rows and rows of lamps were installed, and someone informed us in a hushed voice of the power represented. Everything was about ten times brighter than day, and Hollywood and Elstree were outshone. Then it proved that the

proceedings were being recorded for sight and sound, and the speeches were accompanied by the subdued grumble of the cinematograph apparatus. "Light! More light!" exclaimed Goethe on his death-bed. The enthusiasts for painless death evidently mean to have the subject well illuminated.

### Going one Better.

The enthusiastic cinematographers who have been exhibiting in Russell Square had a hard nut to crack at a Saturday afternoon discussion when amateur work was rather severely criticised, not from any narrow point of view of technique, but from that of picture-planning. For example, one picture was shown of the circus at Olympia, and it looked extraordinarily good, too. One felt oneself at the circus and following with interest the various turns. One humorous interlude was due to a pair of wrestlers, who combined the clown and the acrobat so that one laughed nearly all the time. But here came the cold

water of the critic. He said that what made us laugh was not the photography at all, but simply Mr. Bertram Mills—a very big difference. He said that no photographer ought to be satisfied unless in a humorous picture he made people laugh more than they would laugh on seeing the original. That is something to do, and no mistake. We must do better than our original subjects every time. It is a case of out-lauding those who laugh, and out-weeping those who weep. Not easy to do, but in the case of the circus the critic explained what he meant. The photographer had concentrated on the arena, but he would have got bigger laughs and bigger thrills if now and then he had directed his lens upon the gaping audience, picking out perhaps one spectator who was absent-mindedly doing some comic thing. That would have provided the background to the studies of the circus proper, and have made the spectator at one remove—that is, the man who sees the pictures afterwards—enjoy it with a keener sense than those who were there.

## READERS' PROBLEMS

Selected queries on topics of general interest to readers will be fully dealt with on this page week by week. Other replies appear as usual on the last page.

### Duplicating a Negative.

*I have a (to me) valuable negative with over-dense high-lights, and as I have never used persulphate I am afraid of spoiling the negative. What is the procedure for improving matters by duplicating the negative?*

J. E. (Tring.)

It sounds as though your negative is a suitable case for ammonium persulphate reduction. This process is reasonably safe in experienced hands, but you are wise to avoid it in the case of a negative you value.

We should ourselves have advised you to take the course you suggest, and make a new negative by copying. This will almost certainly mean sacrificing a few plates, but with care you should succeed in getting exactly what you want, and the experience will stand you in good stead for future proceedings of a similar kind.

First get a box of plates of the size of your negative, of the "ordinary" brand, with an H. & D. speed round about 150 or 200. The general lines of procedure are similar to those in making a bromide print, but less exposure is necessary, and a suitable exposure must be found by trial and error. The first plate should be exposed in, say, four strips, giving increased exposure from one strip to another, and being careful about the exact times given, and particularly about the distance of the printing-frame from the light.

Development times should also be carefully noted. After fixing and rinsing, the resulting positive is examined, both by transmitted and reflected light, to decide which strip is the most satisfactory. In this case your aim is to reduce contrast, so you must carefully study the high-lights to see if they show proper gradation.

When you have secured a good complete positive it is washed and dried. Remember that you can reduce contrast, and

secure a sufficiently "soft" result by full exposure and short development, but this must not be overdone.

You now repeat the operations by exposing another plate behind the positive transparency, this giving you the new negative. Here again you can exercise control by adjusting exposure and development. Should you want more contrast, you decrease exposure, if necessary, and prolong development. Your new negative is not, of course, an exact "duplicate" of the original, but should be an improvement on it.

### Diffusing Materials.

*How are bolting-silk and chiffon used for enlarging purposes?*  
R. E. A. (Milford.)

Each of the materials named can be used in several ways according to the effect desired.

Bolting-silk is sometimes plated in actual contact with the bromide paper, contact being secured with a sheet of glass. The image is then not so much diffused as broken up by fine light lines. If the silk is stretched on glass, and separated from the paper by the thickness of the glass, no lines are visible but the image is moderately diffused. If the silk is placed farther from the paper, or moved about during exposure, diffusion is increased.

Chiffon is generally used on the projection lens itself. A cardboard ring, made to fit the lens, has one or more thicknesses of chiffon stretched over it, and is put on the lens like a cap. Black chiffon is generally preferred. The degree of diffusion depends on the number of thicknesses and the fineness of the mesh. Exposure is of course increased, sometimes very considerably. If this method is carried to extremes, the edges of dark masses spread into adjacent high-lights, and this should be avoided.

# Photography in Winter

Now that photography is practised all the year through, the photographer has to regard seasonal conditions which may affect his results adversely. In the following article some technical points which should have attention by all workers are dealt with.

**P**HOTOGRAPHY knows no close season. Rapid lenses, highly sensitive material, handy apparatus, and improved means for making exposures by artificial light, all combine to induce the amateur photographer to carry on operations throughout the year. It is a fact that there are more opportunities for the production of original pictures at this season than at any other.

There are one or two essentials that should be observed by the photographer who is intending to continue operations under conditions that will prevail during the winter months.

## *Temperature.*

The first consideration is the lower temperature at this time of the year. For example, developers which contain hydroquinone need to be used at a temperature of not less than 60° Fahr. for safety, as this chemical ceases to function at low temperatures, and the developing formula containing it will not be properly balanced. Other developers become slower in action, and need longer time in order to produce negatives of satisfactory printing density.

While on the subject of temperature the photographer should be aware of bringing the temperature of the solution to the right degree by the addition of hot water, because it will speedily fall to the same temperature as that of the apartment where the work is done.

The best course is to place a stove in the dark-room for a few hours before the work is to be done, or, if this is impracticable, to conduct operations in a room that has already been warmed.

The effect of developers working at low temperatures is the production of negatives flat and lacking in contrast, in spite of longer development. Prints on bromide or chloro-bromide papers will be of

poor colour. Imperfect fixation is also to be guarded against. The only safe course at this time of the year is to use a thermometer.

If the suggestion made with regard to warming the dark-room, or working in a warm apartment, cannot be carried out, the photographer may adopt either of the following methods of keeping solutions at a sufficiently high temperature. A couple of bricks may be heated in an oven, or warmed near a fire. The developing dish may be placed upon them, and it will be found that the bricks will retain their warmth and maintain their heat for a long time. Another way of attaining the same object is to place a hot-water bottle near the dish.

## *Atmosphere and Damp.*

The winter photographer will do well to be on his guard against the effect of winter atmosphere or damp. It is well known that if a lens is brought from a colder atmosphere into a warmer one, moisture will at once form upon the glasses. If this is not noticed the effect will be that the negatives will be lacking in good definition, and may in bad cases suggest under-exposure.

The photographer who uses a camera fitted with a focussing screen will at once see the effect of this, but in the case of miniature or roll-film cameras the condensation of moisture will escape notice until too late unless the photographer is on the watch for it.

Another point with regard to the lens is that in the case of cameras used for outdoor work the glasses should be frequently inspected. A dullness will appear over the surface which will impair fine definition. This is especially likely to happen when the camera is used in large towns or in a smoke-laden atmosphere. It is quite an easy matter to remove this film from the lens elements, but if neglected the task is less easy. All that is necessary

is a wipe with an old piece of soft, well-washed cambric—such as an old, clean handkerchief. Hard rubbing must be avoided, as the glass used for many of the best anastigmats is soft, and easily abraded.

## *Contrast in Winter Subjects.*

The photographer who is not familiar with winter work out of doors may find that his results are lacking in contrast, and especially in the case of negatives of subjects photographed on dull days. A little longer development is sometimes called for, and in some cases when the plates or films are made to produce negatives of soft gradation, it is better to change over to one of more vigorous type. For outdoor subjects upon dull days a plate of the "press" type will be found useful.

When the subject will permit, and it is necessary to make a bright picture, apart from pictorial considerations in which mist or atmosphere play a necessary part, the photographer will find that panchromatic material, used in conjunction with a deep filter, will have a surprising effect upon the contrasts of the subject.

Another point respecting plates and films for winter use must be mentioned. The photographer should be on his guard against the results of exposing sensitive material to the effect of damp atmosphere, when in the camera. After removal from their protective packing, plates or films do not keep so well, and after a week or two in the camera they should not be regarded as certain to be perfect, unless the camera has also been stored under good conditions.

It is a good plan in the case of roll films to load the camera, and to wind the film to the point indicated by the warning hand, if an exposure is not to be made at once. The film will be afforded additional protection, and to wind it to No. 1 is but a matter of a moment.

*Christmas illuminations of West End store. 3 secs., f/4.5, Selo Hypersensitive pan. film.*

# CHRISTMAS

## Shop-Window Displays

An Attractive Night Subject for the Camera at the present time.

By ROBERT W. NEWBY.

**D**URING the past few years the advent of extremely fast films and plates has enormously increased the interest taken in night photography, and by now keen photographers are beginning to tire of what might be called the more common subjects, such as floodlit buildings, illuminated cinemas and neon signs, and are constantly searching round for new material.

The brilliantly-lit Christmas shop-window displays, to be found in all large towns at this time of the year, can form very pictorial subjects for the photographer who is keen enough to take his camera out of doors on winter evenings.

Photographs of shop windows themselves are perfectly easy to take on any film, and even with the simple lenses of box cameras, provided you have a tripod or other firm support for the camera, and can persuade the shop gazers to keep away from the window for a few moments while you are making a time exposure. With a brightly-lit display as your subject good photographs can be secured with exposures of 4 to 5 seconds at f/11, using one of the "chrome" films.

However, in this, as in so many photographic subjects, human interest can play a vital part in transforming a dull and lifeless photograph (which nevertheless may be technically excellent) into a real picture. If you have a lens aperture of f/4.5 or larger, it is quite possible to take snapshots at 1/5th or even 1/10th second, using hypersensitive panchromatic films or plates. You can then include a crowd of shop gazers in the photograph without having to make them pose.

When photographing people walking, 1/10th second is about the slowest speed that can be given to arrest movement during exposure, and even then care must be taken to avoid having moving pedestrians too close to the camera.

If cars or buses are to be included, they should be taken approaching or going away from the camera, rather than proceeding across the picture. Their movement, except at high speeds, will not then be noticeable.

In shop-window photography, however, the problem of accommodating moving objects in the photograph does not usually arise, since close-ups of the display are generally required in which the spectators, if any are included in the picture, will be standing still and looking into the window. Of course, if a wider aperture lens than f/4.5 is available it is best to use it, and cut down the exposure to 1/25th second, provided a great depth of focus is not essential.

If the camera has to be held in the hand for an exposure of 1/10th or even 1/5th second, you will find that risk of movement during exposure may be minimised by pressing the camera firmly against the body and holding your breath.

The only trouble about using a camera on a tripod outside a shop in a busy street, apart from getting it accidentally knocked over, is that either you will not get the chance of a "look in" at your selected window, or else the shop gazers will stand clear of it, thinking that they will be in your way. The latter is, of course, the very effect it is desired to avoid. However, by exercising a little patience and pretending that you are not yet ready for the photograph, people will forget your presence and by keeping your eye on the view-finder you can snap them at the most opportune moment.

Usually the best pictures can be obtained from the side, as you then have your "audience" illuminated by the bright lights of the window. This has the added advantage that you and your camera will be less in the way of passers-by. If you wish to photograph from behind the crowd, choose a window near a street lamp, and the people's backs will then not be in complete shadow. On the other hand, silhouette effects, with the people shown up in relief against the brightly-lit window, can often yield very pleasing results.

With a modern miniature camera, and the great depth of field given with its short-focus lens, it is frequently possible to get all the necessary planes in focus at the same time, even with a large aperture.

*A window of a London store at night. 1/5th sec. at f/4.5, Selo Hypersensitive pan. film.*

# The latest

# PATHÉSCOPE

## introduction

*For use with 30-ft. and 60-ft. reels of Pathéscope 9.5-mm. films of which a large selection can be bought outright. Hand turned.*

Here is a really first-class scientific instrument for showing real motion pictures in every home. It is made by the "Pioneers of Cinematography."

**The New 9.5-mm.**

# "ACE"

Designed upon the best cinematographic principles, the "Ace" gives easily a brilliantly illuminated picture 2 ft. wide or more with real Mickey Mouse and many other 9.5-mm. films.

## Complete with Resistance

For all voltages between 110 and 250 either Alternating or Direct current,

or for use with accumulators where other electricity supply is not available.

# PATHÉSCOPE LTD.

10, GREAT MARLBOROUGH STREET, LONDON, W.1, and  
NORTH CIRCULAR ROAD, CRICKLEWOOD, LONDON, N.W.2

# GET YOUR CHRISTMAS GIFTS—AT “THE WESTMINSTER” YOU CANNOT DO BETTER

## THE NEW MODEL IIIa LEICA

The Precision Camera.

F/2 Summar, automatic focussing, interchangeable lens mount, all chromium plated. **£43:0:0**  
Nine monthly payments of 100/6.  
Model III, f/3.5 Elmar anastigmat, automatic focussing, interchangeable lens mount, self-capping focal-plane shutter, speeds 1 to 1/500th sec., T. and B. **£31:16:0**  
Nine monthly payments of 74/2.  
Leica Manual, post free. **21s. 0d.**

## PATHESCOPE 200-B PROJECTOR 9.5-MM.

### OUTSTANDING FEATURES:

Fitted with highly-efficient 250-watt direct lighting system, giving a brilliant screen picture 10 ft. wide. Flickerless projection. Very compact. Fan-cooled and asbestos-lined lamphouse. Simple threading. Universal tilting movement. Motor rewind for use on A.C. or D.C. supply, complete with lamp and motor drive for use on 100-volt circuit, 300-ft. empty reel and flex. **£15:0:0**  
Nine monthly payments of 35/-.  
Resistance for use on voltages 200 to 250, extra. **£1:15:0**

## The Multi-speed EXAKTA

Self-capping focal-plane shutter, speeds 12 to 1/1,000th sec., T. and B., delayed action 1/1,000th to 6 sec.

Fitted f/2.8 Zeiss Tessar anastigmat, metal focussing hood with magnifier, simple focussing, 3 ft. to infinity. Takes standard V.P. films. **£27:10:0**  
Double exposures an impossibility.  
Nine monthly payments of 64/2.

## THE ZEISS IKON SUPER IKONTA

530 Super Ikonta with the NEW Rapid shutter. No. 530. Takes 18 pictures on standard 3 1/2 x 2 1/4 roll films.

Fitted f/3.5 Zeiss Tessar anastigmat, Compur Rapid shutter, speeds 1 to 1/500th sec., T. and B., self-erecting front, built-in rangefinder, ensuring critical focus. **£18:12:6**  
Nine monthly payments of 43/8.  
If fitted Rapid Compur speeds 1 to 1/500th sec., 22/6 extra.

## THE CONTAFLX

The ONLY Camera with built-in Photo-Electric Exposure Meter.

Takes 36 pictures 1 1/4 in. on standard 35-mm. film. Metal focal-plane shutter, speeds 1 to 1/1,000th sec. and Time, arranged very conveniently in four groups, with built-in delayed-action release. The shutter and film-winding mechanism are coupled together, as with the more familiar Contax. All-metal folding focussing hood, complete with magnifier. The front and back of the finder hood form an Albada finder when using camera at the eye-level. Quick-action interchangeable lens mount taking lenses from 2 to 58 in. focal length, fitted with 3 1/2-in. f/2.8 finder lens. Special condenser type focussing screen, which gives a very bright image, even at the corners.

### PRICES:

F/2.8 Zeiss Tessar anastigmat. **£64:12:6**  
Nine monthly payments of 150/10.  
F/2 Zeiss Sonnar anastigmat. **£71:17:6**  
Nine monthly payments of 167/8.  
F/1.5 Zeiss Sonnar. **£87:2:6**  
Nine monthly payments of 203/4.

Write for leaflet, post free on request.

## MINIATURE SNIPS FROM 24, CHARING CROSS ROAD, W.C.2

Leica Model IIIa, chromium, with f/2 Summar lens, multi-speeds 1 to 1/1,000th sec. As new. List **£43:0:0**  
Leica Model III, chromium, with 5-cm. f/3.5 Elmar lens, coupled focussing. List **£31:16:0**. Indistinguishable from new **£23:17:6**

Leica Model II, chromium, with 5-cm. f/2 Summar lens, speeded 1/20th to 1/500th sec. List **£26:17s.** As new. **£27:12:6**  
Leica, standard model, with 5-cm. f/3.5 Elmar lens, speeded 1/20th to 1/500th sec. List **£16:19s.** As new. **£13:4:6**  
Leica Model III, black, with f/2 Summar 5-cm. lens, complete with ever-ready case. List **£40:18s.** Exactly as new. **£30:15:0**  
Leica Model I, with 5-cm. f/3.5 Elmar lens, speeded 1/20th to 1/500th sec., complete in ever-ready case. **£10:17:6**  
Leica Model II, black, with 5-cm. f/2 Summar lens, speeded 1/20th to 1/500th sec., complete in ever-ready case. List **£36:18s.** Indistinguishable from new **£27:15:0**

Contax, latest pattern, new type improved range-finder, all speeds from 1 to 1/1,000th sec., fitted 5-cm. f/2 Sonnar lens. List **£41:10s.** As new. **£30:15:0**

Contax, fitted 5-cm. f/2.8 Carl Zeiss Tessar lens, latest model, multi-speeds to shutter. List **£33:15s.** As new. **£25:7:6**  
Contax, latest, with 5-cm. f/3.5 Carl Zeiss Tessar lens, interchangeable. List **£31:10s.** As new. **£18:0:0**

Rolleicord, latest pattern, with f/4.5 Carl Zeiss Triotar lens, Compur shutter. List **£11:10s.** In original box. As new **£8:17:6**

Rolleicord, new all-black model, with f/3.5 Carl Zeiss Triotar lens, Rapid Compur shutter, complete with ever-ready case. List **£14:10s.** As new. **£10:7:6**

Retina, Kodak's new miniature camera, fitted f/3.5 Schneider Xenar anastigmat, in Compur shutter. List **£10:10s.** As new **£7:10:0**

4 1/2 x 6 cm. 18-on-2 Brownie Film Super Ikonta, with 2 1/2-in. f/3.5 Carl Zeiss Tessar lens, Rapid Compur shutter, latest model. As new. List **£16:12s. 6d.** **£13:15:0**  
3 1/2 x 2 1/4 and 4 1/2 x 6 cm. Super Ikonta, fitted 4 1/2-in. f/4.5 Carl Zeiss Tessar lens, Rapid Compur shutter. As new. List **£19:13:17:6**

Very Latest Super Nettel, fitted 2 1/2-in. f/2.8 Carl Zeiss Tessar metal focal-plane shutter, 1 to 1/1,000th sec., as fitted to the Contax. 36-exposure films. List **£24:15s.** As new. **£18:7:6**

6 x 6 cm. (2 1/2 square) Super Ikonta, fitted f/3.5 Carl Zeiss Tessar anastigmat, coupled focussing. Rapid Compur shutter. List **£23:5s.** As new. **£18:10:0**

6 x 6 cm. Super Ikonta, fitted f/2.8 Tessar lens, Rapid Compur shutter, coupled focussing. Listed at **£28:5s.** In original carton. Unsold. **£21:0:0**

## LEICA LENSES Guaranteed Optically Perfect.

2.8-cm. f/3.5 Hektor. List **£10:18s. 6d.** As new. **£8:2:6**

3.6-cm. f/3.5 Elmar. List **£9:5s.** Like new. **£6:17:6**

5-cm. f/2 Summar. List **£17:14s.** **£13:2:6**

9-cm. f/4 Elmar. List **£11:17s.** **£8:15:0**

9-cm. f/2.2 Thambar. List **£21:19s.** **£0:0:0**

10.5-cm. f/6.3 Elmar. List **£10:3s.** **£7:5:0**

13.5-cm. f/4.5 Hektor. List **£18:12s.** **£13:17:6**

## MODERN MINIATURE APPARATUS taken in Part Exchange

WE HAVE IN STOCK EVERY MODEL OF LEICA, ROLLEIFLEX, and OTHER MINIATURE CAMERAS, SECOND-HAND and FULLY GUARANTEED. MODERN CINÉ APPARATUS WANTED FOR CASH or Part Exchange

## The VICTORIA (Improved Model.)

The ideal camera for Autumn photography.

F/2.9 Schneider Radoniar anastigmat, delayed-action Compur shutter, speeds 1 to 1/250th sec., T. and B.

**£6:15:0**

Nine monthly payments of 15/9.

18 pictures 2 1/2 x 1 1/4 on standard 2 1/2 by 3 1/2 roll film.

Ditto, Rapid Compur, 1 to 1/400th sec., T. and B. **£7:19:6**

Nine monthly payments of 18/7.

Body of camera is moulded from practically indestructible plastic material, the surface being attractively finished. Leather bellows are fitted and the metal parts of camera are plated.

## THE NEW PATHESCOPE “ACE” 9.5-mm. PROJECTOR

### 37/6 BRITISH MADE

The “Ace” is sturdily built, being made throughout of solid high pressure die castings. Can be run off any house current from voltages 110 to 250, or from accumulators. Will give a brilliantly illuminated picture—2 ft. wide at a distance of 8 ft. from the screen. Takes the 30-ft. or 60-ft. film. Supplied complete with lamp, flex and resistance.

## THE NEW SUPER IKONTA

Takes 11 pictures 2 1/2 x 2 1/4 on standard 3 1/2 x 2 1/4 roll films.

Body of hard aluminium alloy, with hinged back leather covered, leather bellows. Weighs only 19 oz.

Special device to avoid double exposures, latest pattern distance meter coupled to lens focussing, f/2.8 Zeiss Tessar anastigmat, Rapid Compur shutter, speeds 1 to 1/400th sec., T. and B. **£28:5:0**

Nine monthly payments of 65/11.

# Calendars for Christmas

By D. Y. GOODERSON and H. F. TAYLOR.

**N**EXT to the Christmas card a small calendar makes the best greeting for Christmas and the New Year. Photographers have an advantage in being able to make their own calendars, as they can use their prints for the purpose. Not only can money be saved, but calendars are readily saleable, and may be made a source of profit.

They are easy to make, and the little "tear-off" calendars for affixing to the card are obtainable at all stationers, stores, etc., very cheaply in all shapes and sizes. If the same size and type of calendar card is being made the calendars can be bought all alike by the dozen more cheaply still.

The tools required are few and simple. Mounting boards of various tints cut to useful sizes can be obtained from any artists' shops. A hollow punch is required for cutting clean holes through which the ribbon is threaded for hanging the calendar. The selection of tinted boards, calendar tabs and general arrangement is a matter of individual taste. Whether the photograph has a border or not a line ruled round the edge of the print with a soft pencil will add to the appearance and finish of the print. Elaborate decoration should be avoided. It occupies time, and usually takes interest away from the print itself. A grey pencil line on a rough cream board looks very effective and is neat and clean.

If you are exhibiting at a church bazaar take a few snaps of the church and use them on your calendars. Cheap, small

pictorial calendars will be useful here. Contact prints not less than  $2\frac{1}{2} \times 3\frac{1}{2}$  in. can be used for this purpose. A fair number of medium size calendars should be prepared and a few of larger size and better finish for the benefit of the wealthy patrons. Always supply envelopes; it is annoying to buy a calendar and then have to go somewhere else to buy an envelope.

During the year the photographer collects a number of good contact prints which cannot be used for exhibition purposes but are too good to throw away. What better use is there for these than to use them for calendar work?

The accompanying illustration gives a good idea of a typical and easily prepared calendar. Here three pieces of mounting paper were used. A white stout piece for the base, a thinner grey piece cut to show a white margin and pasted on to the base, and finally the print itself mounted on another small, thin light mount and stuck down on the other two. The little calendar is stuck down in the space below. A ribbon through

*A typical simply-made Calendar.*

holes at the top completes the matter. If necessary a greeting can be written or drawn on the front, but it is better to let the sender write his or her own greeting and signature on the back. The calendar can then be hung up by the recipient, and serves a useful purpose during the whole of next year without the greeting obtruding all the time. About June or July the constant sight of a calendar wishing you a merry Christmas is apt to pall.

As a variation of the usual straightforward stuck-on print, the cut-out calendar is worth trying. A suitable figure or figures may be chosen, and a few whole-plate prints made, so that the figure is about six inches high. These are then pasted on three-ply wood and cut out in outline by means of a fretsaw, leaving the base and a place for the calendar. The calendars are fixed in position by a little gum on the back page.

To make the figure stand upright, a piece of wood, one-inch cube or so, is glued to the base at the back.

The whole process is extremely easy, and the finished product most attractive. Every amateur doubtless has suitable negatives in stock, though the more ambitious will possibly make special exposures so that a person may be depicted holding or pointing to the date, or even the family mongrel indicating it with his paw.

*A batch of Cut-out Calendars.*

*The Snowclad Countryside—a Christmas landscape.*

**W**INTER-TIME is often termed by many a camera owner as the "off period." When the leaves fall and Nature assumes the stark cold bareness of her winter's rest the camera is put away like the hedgehog, to whom the shortened days and long nights are the signal for a prolonged sleep until the breath of spring stirs and warms the earth once again.

Such a procedure is quite wrong for any amateur photographer worthy of the name. Pictures galore, both indoors and out of doors, are awaiting the keen worker. In the country, even if the glory of the leafy raiment of the trees has departed they bear in their nakedness the charm of wonderful tracery and graceful form. Against a suitable sky the winter-time trees will weave intricate patterns that in themselves are pictures. These beautiful subjects can only be secured at the present time.

Snow, of course, is the photographer's loadstone, and lucky are the pictorialists of the north who see it in generous falls every winter while the southerner frets his spirit in fruitless hope; for snow comes rarely to the south, and even when it does the poverty of its fall is usually insufficient to fill the hollows and give that unbroken stretch of vivid whiteness that turns the most commonplace scene into a picture of ethereal beauty.

But have your camera always ready and

# Seasonable

By F. READ.

loaded throughout the winter in case the snow does come. It may arrive in the passing of the night, and if the morning finds your slides empty or you are without a film the opportunity for picture-making may be gone for ever this season. Here, although snowscapes are apparently lacking in actual colour, panchromatic films or plates will always give the best rendering of such subjects if all the subtle gradations are to be secured.

If we cannot all be sure of snow there are other aspects of nature belonging to winter that are pictorial and will often make a good study. Everyone can reasonably hope to see frost, and though Jack Frost paints with an icy hand in the biting stillness of the night and photographing his creations is cold work, his pictures in the early morning on the hedgerows and windows, before the sun has time to thaw them out, are of an entrancing delicacy and refinement.

*A Corner of the Kitchen. An artificial-light genre subject.*

*The New Doll.*

Fog and mist can also be used to good effect. Both soften the harshness of winter's severe outlines, and give the view mellow distances, the planes receding with an elusive charm.

For the same reason winter street scenes have a character of their own worth recording; while in this country the activities on the farms, in the woods, and the unforgettable glamour of a hunting morning as the hounds move off will stir the most indifferent camera user.

# Subjects for the CAMERA

If an attempt were made to outline the limits of indoor photography during the present time of year, this article would hardly be without an end, for here indeed is a vast field bounded only by the worker's enthusiasm. Portraiture and figure studies must take pride of place, and it is fascinating work experimenting with various lights and poses with models drawn from the family circle.

*December Trees and Mist.*

There is every facility to-day for the amateur to make a success of artificial-light photography. Panchromatic emulsions should be used, as their effective speeds are increased enormously in artificial light; thus the 700 plate becomes 2,000 and the hypersensitive 8,000. The writer has taken exposures on the latter plate of 1/10th second at f/4.5, in an ordinary light-papered room, the illuminant being magnesium ribbon, an impossible performance but a few years ago.

Flash-bulbs are also of great use for indoor portraiture and give complete security against fire, a very important con-

*The Woodman in Winter.*

*Christmas Eve.*

sideration when taking party photographs when there is usually an amount of inflammable material about.

Still-life and genre subjects are also attractive. Many workers think still-life photography so simple as to be beneath their notice, but the production of a good picture is no easy task and will be found to be a severe test of the worker's technical ability. The obvious advantage of this type of work is that one can repeat exposures until a perfect result

*The Hounds moving off—a typical December shot.*

is secured. There are countless objects and incidents in the home that can be used for subject matter.

It is hoped that the suggestions contained in this article will be of use to other readers of "The A.P.," and instead of the camera being treated like the hedgehog it will be kept in use the whole winter through. A final advantage is that when the spring does come again one's faculties will be in touch with photographic technique and there will not be any doubt or delay in making the most of spring exposures, as is often the case when the camera is not used at all during the dark months.

# NEWS AND REVIEWS

ITEMS OF GENERAL INTEREST FROM ALL QUARTERS.

The new "Roland" Miniature Camera which has just been introduced into this country by R. G. Lewis, of 202, High Holborn, London, W.C.1, has many novel features. Designed to give sixteen exposures on a  $2\frac{1}{4} \times 3\frac{1}{4}$  spool, it has the new 7-cm. f/2.7 "Miniature Plasmat"

lens designed by the celebrated Dr. Rudolph for optical equipment, fitted in the Rapid Compur with delayed-action device. Perhaps its most interesting feature is its coupled range-finder. Unlike all other previous types, it is fitted inside the view-finder so that both the focussing and the composing of the picture can be effected without moving the eye. A tiny prism can be seen in the middle of the view-finder which reflects a portion of the image seen through the other range-finder window. When this small image is displaced from the general view a large knurled ring round the base of the lens barrel is rotated until the two images are synchronised. At the same time the en-

tire lens and shutter has been moved by means of an enclosed helical screw and automatically focussed on the subject. The lens and shutter are mounted on a metal barrel, which is brought out into position and locked by a quarter turn. An exposure meter of the extinction pattern is also included in the equipment. Reflected from the range-finder window on to a step wedge, a number of small bars can be seen according to the intensity of the light reflected from the subject. By comparing the number of bars seen with a dial calculator fitted to the side of the camera, the exposure time for any aperture can be seen. An automatic depth-of-focus scale for any stop at any distance is also included on this calculator. It is finished throughout with black leather and dull chromium fittings on a die-cast body. Altogether, it is a high-class precision instrument capable of first-class work. Price £28 15s., complete with neck-strap, wire release and lens cap. Ever-ready case extra.

For simplicity of operation and compactness the new "Prinsen" Meter is an interesting development of the now popular photonic exposure indicator. With the exception of the emulsion speed scale, which must be set to its equivalent H. & D. number, there are no calculations to make or dials to rotate. The photo-cell glass is pointed in the usual way at the subject to be photographed, and the value which is engraved on the meter pointer itself is read off and followed along the particular coloured band on which it rests, to its equivalent

shutter speed on the right; or vice versa, from the shutter speed necessary to suit the subject, to the stop value. The shutter speeds range from 1/1,600th second to 60 seconds, and the lens apertures on the indicator from f/1.4 to f/16. It is equally suitable for all cine cameras. As this meter does not employ a variable resistance to facilitate measuring weak light values, all exposure times are doubled if the indicator moves no farther than a small line at the lower end of the scale. Its portability will appeal to many, as measuring only  $3 \times 2 \times 1$  in. it can be carried comfortably in the waistcoat pocket. It is obtainable from the sole distributors in this country, Messrs. Sands Hunter & Co., Ltd., 37, Bedford Street, London, W.C.2. Price 3 guineas, with leather case 5s. extra.

At a meeting of the Council of the Royal Photographic Society on Monday, 9th December, the Fellowship of the Society was conferred upon G. Marshall Smith, under Article of Association 9. The Fellowship was also conferred upon the following Associates: C. W. Bradley (Gatley, Cheshire), F. P. Beyne (Wood Green, London, N.), R. H. Cricks (Selsdon, Croydon), C. C. Davis (Portsmouth), J. Dixon-Scott (London, W.C.1), H. Flower (Ilford, Essex), H. E. Gaze (Hamilton, Waikato, N.Z.), H. J. Grayson (Childeritch, Essex), A. G. Greaves (Gosforth, Newcastle), N. H. Griggs (London, W.C.2), H. S. Hayden (McGill University, Montreal), D. S. Herbert (Weymouth, Dorset), J. T. Hibbert (Kidderminster), G. S. Moore (Brentwood, Essex), R. E. Owen (Stanmore, Middlesex), F. J. Pittcock (University College, Gower Street, W.C.1), Mrs. H. D. A. Sanders (New York City, N.Y.), F. H. Smith (Hove, Sussex), J. Tunbridge (London, W.1), D. P. Woosley (Brentwood, Essex).

## Exhibitions and Competitions

### CURRENT AND FUTURE.

Notices of forthcoming exhibitions and competitions will be included here every week if particulars are sent by the responsible organisers.

The Amateur Photographer Monthly Competitions for Beginners, Intermediate and Advanced Workers.—Entries, December 31. Rules in the issue of November 27.

Leicester P.S. International Exhibition.—Entries January 24, 1936; open, February 24—March 7, 1936. Exhibition Secretary, H. Foscutt, 19, Doncaster Road, Leicester.

Preston Scientific Society.—Eleventh Annual Open Photographic Exhibition. Monday, February 3 to Saturday, February 15, 1936. Entries close, Friday, January 10, 1936. Particulars and entry forms from the Exhibition Secretary, F. Wells, 65, Powis Road, Ashton, Preston, Lancs.

Scottish National Salon.—February 8–29, 1936. Entries close, January 11. Particulars and entry forms from the Hon. Salon Secretary, Norman G. Brown, 36, North Lindsay Street, Dundee.

The 40th Annual Exhibition of the South London P.S.—Open, February 15–March 14, 1936. Entries close, January 21. Further details and entry forms from Hon. Exhibition Secretary, H. S. Adams, 40, Stockwell Park Road, London, S.W.9.

Ilford Photographic Society.—Annual Photographic Exhibition. From Monday, March 2 to Saturday, March 7, 1936. Closing date for entries, Saturday, February 1, 1936. Particulars and entry forms from E. G. Roughton, 63, Havering Road, Romford, Essex.

Edinburgh Photographic Society.—74th Annual Open Exhibition. Open, February 22–March 7, 1936. Entries close, February 3, 1936. Particulars and entry forms from the Hon. Exhibition Secretary, Geo. J. Kennedy, 16, Royal Terrace, Edinburgh.

Birmingham Photographic Society.—45th Annual Exhibition. Open, February 29–March 14, 1936.

Entries close, February 8, 1936. Particulars and entry forms from the Hon. Secretary, Eric H. Bellamy, Waterloo House, 20, Waterloo Street, Birmingham, 2.

Birkenhead Photographic Association.—Annual Exhibition. Open from March 4–7, 1936. Entries close, February 12, 1936. Particulars and entry forms from R. Greenwood, Four Chimneys, Irby, Frankby, Cheshire.

Sunday Referee Weekly Photographic Competition.—£10 offered every week for the best picture published. See Sunday Referee for full particulars.

Seventh Chicago International Salon of Photography.—Open, July 23–October 4, 1936. Entries close, June 15, 1936. Further details and entry forms from Alex. J. Krupny, Chicago Camera Club, 137, North Wabash Avenue, Chicago, Illinois, U.S.A.

I Internationale Kunstphotographische Ausstellung in Karlsruhe.—Open from July 18–August 9, 1936. Entries close, June 18, 1936. Particulars and entry forms from Mr. Hugo Heyer, Schulgasse, 26, Karlsruhe.

# how I make my EXHIBITION PICTURES

Methods and Ideals of well-known Pictorial Workers.

No. CCCXII.

Mr. D. V. T.  
TAYLOR.

From information communicated to our Special Representative.

"SUNSHINE I regard as practically essential to pictorial photography, and most of my pictures are made when the sun produces striking lighting effects, and often makes a picture out of very mundane material. I seldom venture out with a camera when the sun is completely hidden.

"My favourite negative materials are Agfa Isochrom films, and Ilford S.R. Pan. plates, both usually in conjunction with a two-times filter. Standardisation of negatives is most important, and having found the correct

exposure by meter or reckoner, I invariably develop by the time and temperature method and aim to produce a negative which, with a normal subject, is printable on medium bromide paper; any variation from normal can be remedied by the use of soft or contrasty paper.

"I prefer bromide paper to chlorobromide, because I work with a condenserless enlarger, and bromide paper is definitely the faster. Also chlorobromide does not give the necessary contrast unless a more contrasty nega-

tive is used, and this naturally entails longer exposure still.

"To get the maximum quality from bromide prints, it is important not to underdevelop, and my minimum development time is three minutes at 65° Fahr.; this ensures that the print loses little quality when dried, and on the application of the usual varnish the original quality, as seen when the print was wet, returns.

"Most of my prints consisting of sunlit subjects convey the impression of sunshine better if of a warm tone, and, if the colour obtained by direct development is not sufficiently warm I usually tone by one of several methods, according to whether I wish to modify the contrast or not. My two favourite methods are silver-mercury-sulphide or chromium intensification. The former method gives a range of tones from warm-black to warm sepia, according to the proportions of the two solutions used, and is useful if a print needs clearing a little in the high-lights. The chromium method gives a pleasing warm colour and intensifies the print at the same time. To get the maximum warmth by this method the developer used for redevelopment should be warm.

"The so-called laws of composition should be studied by every pictorial photographer, and once learnt they should be forgotten, except subconsciously, and made subservient to the motive. Otherwise, if one goes out with a camera and starts measuring on the ground glass, either the subject will have been lost when the time comes to make the exposure, or the composition will look stiff and formal; and there must be something besides mere formality to raise a photograph to the realms of pictorialism. But, in any case, these rules are made to be broken, and nine times out of ten if a subject looks right it is right compositionally.

"Control I regard as quite permissible, as the perfect subject is like the perfect negative, very elusive, and to get them both together is in the realms of impossibility. I regard control on the print as one of the most enjoyable processes in making a picture."

(A further example of Mr. Taylor's work is reproduced on one of the centre Art pages.

TROUBLE FOR'ARD.

D. V. T. Taylor.

# Pictorial Analysis

Every week the picture reproduced on the art page opposite will be analysed in detail for the benefit of readers of the paper who are seeking to improve their pictorial work.

## "THE TRYST," by S. J. Kharegat.

THERE is quite a considerable scope for the exercise of ingenuity in the making of pictures, such as this, with various combinations of the small figurettes and grotesqueries now available as material. Many of them are exceedingly realistic, and can actually be employed as substitutes for the real thing; others are comic, and amusing studies or caricatures can be created with their aid; and there is yet another type of fanciful exaggerations of human figures or animals that lend themselves to the making of designs of an imaginative and decorative character.

In the latter class, the work of Drtikol will, no doubt, be remembered, for several have been shown in the London Salon in recent years, and many of us will be able to recall examples of table-top photography which so closely approximate the real thing that detection is difficult. In this instance, however, there is no attempt at disguise, and the intention is, frankly, of a humorous nature. It is very well done, and the idea is fully expressed, but, as in all work in which the subject and lighting are under perfect control, a very high standard of arrangement and technical achievement is expected. The full range of tone and the quality of the print afford ample evidence of the latter, and the placing of the two diminutive figures; the way they are emphasised by the introduction of the silhouette of the cat as a supporting accent; and the inclusion of the circle of light to simulate the moon and its romantic associations disclose a clever sense of arrangement.

Naturally enough, the interest centres in the two figures (1). Their importance in the scheme is indicated by their strength of placing, and additional emphasis is derived from the strong contrasts of tone within their outlines. Both the most brilliant lights and the deepest darks are placed in this neighbourhood, and,

in view of the attraction exercised by the great concentration of interest so excited, their supremacy is rendered unquestionable.

Chiefly on this account, the arrangement pulls together remarkably well, and there is no doubt but that a high degree of unity has been achieved. It is, however, appreciably enhanced by the figure of the cat (2). This is

a feature that is necessitated by the fact that the figures are placed rather more towards the right-hand side than usual. It serves as a secondary point of attraction; helps to fill the picture space satisfactorily; and, in so doing, creates the illusion that the figures are more forcefully placed than, in actual fact, they are. As is the case with the figures, the contrast of the silhouette against the light of the setting stresses its function, but, having regard to its lack of internal modulations, it has not sufficient pull to compete with them for the prime attraction.

The moderate depth of tone of the background is admirably calculated to display the grouping effectively, and a measure of concentration is attributable to the slight darkening towards the corners. Nevertheless, the simple cross lighting, by exerting its effect mainly on the two little figures, is more responsible for the contrast of tone which ensures their principality, and no little judgment has been exercised in the choice of the angle and direction from which it comes.

No technical data are available, nor is the method of obtaining the circle of light in the setting explained, but it is a simple matter to arrange a like effect, providing the setting is of a semi-transparent character, by placing a low-powered spotlight behind it and focussing it to the size required. Its strength could be controlled either by distance or by the introduction of a diffusing medium between the source of light and the back of the setting, but, so long as its light is weaker than the source illuminating the figures, the precise method is immaterial.

The picture is interesting, and illustrates a type of work that can well be undertaken in the long evenings of the winter-time. Opportunities for daylight photography are considerably limited, but subjects of this nature are more easily dealt with by artificial lighting, mainly for the reason that it is well under control.

It is, too, highly instructive to work out different schemes of arrangement; to try the effect of increasing or reducing the number of elements; to see what can be done with material of widely different nature; to experiment with varieties of lighting; and to exercise the inventive or imaginative faculty in devising new and original themes. A start might be made with similar material, and, as experience accrues, it could be extended in such directions as fancy may dictate.

## SOME CRITICAL COMMENTS on the Beginners' prints reproduced on the opposite page

"SUNLIT STERN," by Joan Wales—No. 3 of the prints reproduced on the opposite page—is an excellent essay in design, and, in this respect, is more finished and complete than any other on the page. The composition is remarkably well balanced; the pictorial motive of sunshine is nicely expressed; and the only thing that calls for comment is the scale in which the stern is shown.

### Relative Proportions.

It is not that too much of the boat is included, but that what is shown is out of proportion in relation to the other boats in the rear. The scale is too big. It makes the size of the more distant craft appear insignificant, and its shape, too, is somewhat uncompromising and lacking in grace.

The choice of a more distant viewpoint, assuming that it was feasible, would enable more of the vessel to be included, and, as its scale would be relatively less, the apparent disproportion existing at present would be counteracted, while, as far as can be seen, no disability seems likely to arise. The shape of the increased proportion would, in all probability, take up a more acceptable form, and, on the whole, the expedient seems one that would be wise to adopt.

It is possible, of course, that no alteration of the viewpoint is practicable, or that any change would involve the inclusion of a feature that might be considered undesirable, and, if so, the present choice of arrangement can only be commended.

The scale and shape of the boat may not be all that could be wished, but, if it should have been a case of having to take it as it was or leaving it alone, it would have been a pity to have missed the subject for what is a more or less academic objection.

### Promising Work.

Having regard to the class in which it was entered for competition, it shows considerable promise, a feature which it shares with No. 1, "Lock Exit," by C. Wells.

Here, the subject has the advantage of including a well-caught figure, but, unfortunately, it is somewhat obscured by being shown against a setting of almost equivalent tone, and the way the barge is disposed, with most of

its lines leading to the right, tends to direct the attention out of the picture on that side.

Whether any change in the line of sight would lead to an improvement or not is problematical, nor does it seem at all likely that deferring the exposure a trifle would be any more effective. If the camera were directed more towards the right, it might be that the running-out tendency would be stopped, but it appears to be highly probable that a part of the lock wall would make an unwanted intrusion, and, if the exposure were delayed, the position would be worse, for, by then, the vessel would have swung over in the same direction.

It may be that, did another barge follow this, it would take a course more to the left, and, if so, the opportunity would be offered for a more favourable placing, but, in the present circumstances, nothing better could be obtained.

### Effects of Sunshine.

At all events, the picture has this much in common with No. 3—it shows an appreciation of the value of sunshine as an effect, and, in this, it deserves a measure of praise.

No. 2, "Emsworth," by Francis H. White, is not without a similar suggestion, but the value of the light on the cottage on the left would be enhanced were there a greater depth of tone in the sky, and the present feeling of restriction would have been avoided had more been included at the top and less at the base.

The use of a sky filter would probably afford a better rendering of the sky, but, to cut down the foreground and increase the proportion allotted to the upper part of the print, it would be necessary to bring the rising front into action. In this connection, it may be mentioned that many experienced workers adopt the expedient of having their lenses placed above the centre on a reversible panel, so that, in the usual run of subjects, an excess of foreground is avoided, while, if it should happen that an opposite arrangement is required, the panel is turned upside down and the lens then comes below the centre line.

An increased scope and wider range of movement is thus provided, and, particularly when the image can be

viewed on a focussing screen, may be found most useful.

### The Moving Front.

It would have been of service, in the reversed position, in a subject like No. 3, or, possibly, in such a case as No. 4, "Church Hill," by J. A. Holdcroft, where the foreground shadow patterns are an essential feature of the design, for, while it is not unusual for a rising front to be fitted, it is seldom that it permits the lens to be lowered.

In this latter print, the interest is mainly in the foreground, the attention being attracted to the figures and shadows, while the upper part is less significant and only acts as a setting. Its function, in this respect, would be more effectively carried out if the whole of the sky were removed, and a trim of half an inch from the top is necessary. If the reproduction be masked accordingly, it is easy to see how much greater is the attraction of the lower portion, and by how much the removal of the competition of the sky enhances the attraction of the elements—figures and shadows—contained in that lower section.

Similarly, with No. 5, "A Morning Call," by Una Wildman, the sky introduces a competitive note that prevents the quite well caught figure from exercising its full attraction.

### Concentration of Interest.

Owing to the exigencies of the subject matter, it is not practicable to remove the sky by trimming, for to do so would also involve the loss of essential parts of the subject; but a concentration of interest that would be almost as great could be achieved by masking the landscape portion of the print during exposure, and allowing the sky to attain an appreciably greater depth.

A like difficulty is avoided in No. 6, "A Loiterer," by R. R. Skemp, by arranging for the sky to be excluded. The value of the sunshine is thereby considerably enhanced, as it is, again, by the extra emphasis imparted by the darks of the figure and shadow tones of the arch. The result would have been better, however, if it had been found possible to have secured the figure without his knowledge.

"MENTOR."

# With the Beginners

## NOTES AND NOTIONS FOR THE LESS ADVANCED WORKER

Every week an article will appear under this heading dealing with a topic of interest to the novice in photography.

### POINTS ABOUT SIMPLE ENLARGERS.—III.

OTHER questions frequently asked about enlargers, in addition to those with which I have already dealt, are: What sort of lens is required? What are the distances from lens to negative and from lens to easel? How much space is required for working an enlarger?

Such questions cannot be answered, even approximately, without having particulars of the various factors that affect the answers; and this is one reason why I am dealing with these points in a general way, so that the beginner should be able to work out the answers himself.

Fig. 1.

For several reasons a "single" lens is not suitable for enlarging, especially by artificial light. Formerly it was usual to equip enlargers with a "portrait" lens, which had both advantages and disadvantages, but which on the whole was efficient. A rectilinear lens will also answer, although it may need more or less stopping down to get good definition over the whole field.

The best form of lens is an anastigmat, working at  $f/4.5$  or  $f/6.3$ . It has a flat field, which is a benefit inasmuch as we are enlarging from a flat negative on to a flat paper. Moreover, it should give satisfactory definition over the whole field, even at full aperture, and this large aperture passes plenty of light, and so shortens exposures.

Whatever type of lens is used it is imperative that it should "cover" a negative at least as large as the largest negative from which it is intended to enlarge.

Its focal length must also be considered, especially when a condenser is used. The focal length of the lens and the focal length of the condenser must approximate to each other. There is considerable latitude, especially with diffused light, but there are limits. It must be possible to bring the light to a focus so as to suit the different positions the lens will occupy for various degrees of enlargement; and this cannot be done properly if there is too great a difference between the foci of lens and condenser.

Now I showed that the diameter of the condenser must

be a little greater than the diagonal of the negative. Such a condenser will have a focal length approximating to the diagonal of the negative. It also happens that the "normal" lens for photographing has a focal length equal roughly to the diagonal of the negative for which it is used.

So, broadly speaking, the normal condenser and the normal lens will just suit each other; and trouble arises only when we use a condenser much larger than is necessary, or a lens with a much longer focus than that generally used for the negative. If we have a large condenser we should use a longer focus lens to suit it.

As to distances and space required we may look first at Fig. 1. The lens, L, has a focal length of 4 in., and in the upper illustration it is enlarging the negative, N, two diameters on to the easel, E. The distances in this case are 6 in. from lens to negative, and 12 in. from lens to easel.

In the lower illustration the enlargement is to four diameters, and now the respective distances have become 5 in. and 20 in. In all cases the distances depend on (a) the focal length of the lens, and (b) the degree of enlargement. In all cases, too, allowance must be made for the space occupied behind the negative by the condenser and the lamphouse. Given all the necessary particulars it is an easy matter to calculate the over-all bench-room required.

Here are four sets of "conjugate foci" for a 4-in. lens when enlarging 1 (same size), 2, 3 and 4 diameters, the upper figure being the lens-easel distance, and the lower the lens-negative distance.

8	12	16	20
8	6	5½	5

And here are the same figures for a 6-in. lens:

12	18	24	30
12	9	8	7½

It will be seen that the second figures are all  $1\frac{1}{2}$  times

Fig. 2.

the first, because 6 in. is  $1\frac{1}{2}$  times 4 in. The distances are always proportionate to the focal length of the lens, so that if we worked out a table for one lens we could easily adapt it for another lens.

It is better not to depend on tables, but to learn how to work out the calculations. It is very easy if the focal length of the lens is known. Take the "diameter" of enlargement (two times, three times, etc.) and add 1.

Multiply the focal length of the lens by this, and you get the lens-easel distance. Next, divide this distance by the diameter of enlargement (without adding 1) and you get the lens-negative distance.

For example, enlarging 3 diameters with a 4-in. lens. Add 1 to 3 (=4) and multiply 4 in. by 4. The 16 in. is the lens-easel distance. We are enlarging 3 diameters, and  $16 \text{ in.} \div 3$  gives  $5\frac{1}{3}$  in., the lens-negative distance.

Such distances are only a rough guide, as we do not generally know the exact point in the lens from which to measure. Final focussing must be done by sight.

There is a more serious snag. Far more often than not we do not enlarge to an exact number of diameters. We may enlarge from only part of the negative, and, moreover, there is no definite relation, in most cases, between negative sizes and paper sizes.

In Fig. 2, the large rectangle, A, represents a whole-plate sheet of paper, B is a quarter-plate negative, and C is a post card negative.

The corner of B falls on the diagonal of A, and this shows that the sizes are proportionate. The length of A is twice the length of B, and the width of A is twice the width of B. It is exactly two diameters; and a two-diameter enlargement of the negative B will exactly fill the paper A.

It is different with the post card negative. Two diameters of enlargement will be about right for the width, but too much for the length. So it is with the great majority of negative and paper sizes, and the result is that we have to sacrifice part of the negative or part of the paper. And that is why the rule for finding conjugate foci is of only limited use. We seldom have a definite "diameter."

W. L. F. W.

## Letters to the Editor

*The Editor is not responsible for the opinions of his correspondents.*

### SMALL STEREO CAMERAS.

SIR,—For thirty years past I have been an enthusiastic stereoscopic worker, and have used cameras for several sizes,  $4.5 \times 10.7$  cm.,  $6 \times 13$  cm. and post card.

After all these years of stereo work, I am now of opinion that the best camera for the amateur would be one taking the generally popular  $3\frac{1}{4} \times 2\frac{1}{4}$  roll films. The great advantages would be the cheapness of the films, both ordinary and colour spools, and the compact size of camera for a reasonable size of picture.

Some stereo workers may object that the small separation of the lenses (about  $1\frac{1}{8}$  in. instead of the usually accepted distance of  $2\frac{1}{8}$  in.) will not enable sufficient stereoscopic relief to be obtained, but a trial will speedily show this argument to be a fallacy.

I believe there is already one stereo camera on the market built on these lines, made by the Thornton-Pickard Co., but something rather more expensive and of better quality is required, and I should be glad to know where I can have my two 3-in. Zeiss Tessar lenses fitted into such a camera, or where suitable cameras and shutters for  $1\frac{1}{8}$ -in. separation can be obtained.—Yours, etc.,

B. H. LOMAS.

### SECOND-HAND CAMERA PRICES.

SIR,—For some time past I have studied with interest the trade advertisements for second-hand cameras in your journal, and have been struck with what would appear to be the complete lack of knowledge of the values of various cameras (or is it sheer prevarication?) displayed by some firms.

To give two recent examples:

(1) Contax,  $f/2$  Sonnar, focal-plane shutter, speeds  $1/25$ th to  $1/1,000$ th sec. Cost £41. As new, £34 10s.

(2) Piccochic,  $f/2.9$  Vidanar, Compur shutter, speeds  $1$  to  $1/200$ th sec. Cost £9 10s. As new, £7 10s.

Regarding the Contax, the model advertised originally cost £32 10s., and was superseded two years ago by the slow-speeds model costing £35 10s. (now £41). Hence the marketable value of the original model would now be about £20.

The Piccochic advertised is the original model as sold two years ago for £5 17s. 6d. It has now been superseded by the Meyer-Trioplan model, priced at about £7 new. The original model is now generally sold (second-hand) for about £3 10s.

The object of this letter is to warn intending purchasers against being inveigled into buying expensive second-hand goods without first ascertaining the original prices.—Yours, etc.,

"FAIR PLAY."

### EVEN ILLUMINATION WITH GAS ENLARGER.

SIR,—Your correspondent "W." in your issue of December 4th complains of being unable to secure even illumination when using a gas enlarger.

I would like to suggest that he is adjusting the mantle too near to the condensers, or that the condensers do not coincide.

Using a bijou mantle with  $4\frac{1}{2}$ -in. condenser, I have fixed the mantle in my enlarger 5 in. from the condensers, and apart from making sure that same is central when commencing work I have no difficulty whatsoever.

The lens used in my case is one of  $5\frac{1}{2}$ -in. focus at  $f/8$ , and my average exposure on normal bromide with an average negative (at  $f/8$ ) is in the region of 15 seconds when enlarging from  $2\frac{1}{4} \times 2\frac{1}{4}$  to  $9 \times 9$ —four diameters.—Yours, etc.,

S. CECIL HOWLETT.

### FOLLOWING INSTRUCTIONS.

SIR,—It would appear that in these days of amateur wisdom insufficient attention is paid to the instructions printed on or issued with all photographic material. I have met several cases where a certain brand of desensitiser has been used for the development of "pan" films and the result has been hopeless fogging through disregard of the instructions. In some cases a red light has been left on during the desensitising and in others the unshaded electric light switched on immediately after. Personally, I find that the makers' instructions, if followed out correctly, give the best results.

This does not only apply to desensitiser, as I am only taking this as a hypothetical case. It will generally be found that the makers' instructions with, perhaps, a few slight variations, give the amateur every opportunity for perfectly processed films, etc., as well as a considerable saving of material and time.—Yours, etc.,

"COMMONSENSE."

### ROLL-FILM DEVELOPING TANKS.

SIR,—Some short time ago there appeared quite a number of letters in the Correspondence column relative to developing tanks for roll films. A summary of the letters would appear to show that a really satisfactory apparatus which did not cause markings on the gelatine backing of the film due to contact with the paper backing had still to be found.

My own experience is confined to but two makes of tanks, but the specifications of others (which were too expensive to warrant purchase as an experiment) did not seem to indicate that they would eliminate this fault. I have now found that the Ensign "Carbine" Film Tank really fulfils the description of the really perfect tank, being one of the simplest to operate and leaving the film absolutely free from any blemishes. In operation, the makers' instructions should be followed, with, however, an additional operation designed to eliminate a small blemish which occasionally appears on the back of the negative which rests against the roller during development. This merely consists in relieving the pressure against this negative by momentarily withdrawing the sliding rod immediately after the commencement of development and once more five minutes or so after. As an additional precaution I perform the same operation during fixing, but it is quite possible that the first single withdrawal of the roller from contact with the negative, thus permitting of early wetting of the gelatine back of the film and backing-paper simultaneously, is sufficient to prevent "paper marks" at this point.

When Azol is used at a dilution for stand development, the rather large capacity of the V.P. size tank (about 700 c.c.) is compensated for by the small quantity of developer used (7 c.c.).—Yours, etc.,

A. W.

# Picture Points

## for Beginners, by RICARDO

### Pictures at Home

AS many beginners will, no doubt, be trying their hand at indoor work at Christmas, one or two hints will be useful.

The variety of subjects possible at this festive season are too numerous to mention, but if there is a Christmas tree, a few toys and a youngster available, one can make many attractive pictures. Novices usually make the great mistake of trying to include too much, similar to that seen in the first one. Although the tree laden with toys, lamps and tinsel looks gay, it seldom looks so attractive when all of it is included and reduced in a small

print; much better show only a branch or two and simplify it. If flashlight is to be used, let the youngster see a weak flash or two first to enable him to get accustomed to it, and so help him to lose camera-consciousness. Next place the tree well away from any intrusive background and decide on a simple motif.

The second sketch supplies a suggestion and one that is almost sure to work. Place the child in a pictorially strong position and select a toy that will attract his attention and give it also good prominence. The attraction, and perhaps a promise of the toy in question, should simplify matters considerably and help to result in a good interesting picture.

### In Conclusion

CONCLUDING this series of "Picture Points," we close with a device that will be of considerable help to all photographers, beginners and advanced workers alike. It is very simple, consisting merely of a piece of stout card with the middle cut out as shown in the left-hand sketch, yet it is remarkably useful in composing, or selecting the subject matter before the exposure is made.

No dimensions are given since it can be made to suit any size or proportion of negative, but the essential thing to bear in mind when making it is that all the margins are comparatively wide, as it is the width of these margins that covers up all the distracting surrounding details and leaves the eye clear to concentrate on the essential subject matter inside the frame. It can be held at any distance from the eye, and when the selected view or suitable composition is made, all that is necessary is to bring the camera to include exactly, or preferably a little more all round than that seen in the inside rectangle.

This device can, of course, be used for every branch of photography, and the novice is strongly advised to make one of these simple viewing frames, for it provides a most instructive way of mastering pictorial composition. It is also an incentive for continual practice—the only road to success in pictorial photography.

### No. XXVIII.

### A Seasonable Night Subject

ANOTHER seasonable subject that will appeal to many workers is to employ a few carol singers for an outdoor night scene.

Several things have to be considered here, and perhaps the most important of all is that of grouping the figures.

Remembering that in our previous grouping experiments we found that three and all successive odd numbers were more adaptable than the even numbers, three figures will be ideal. If they are left to group themselves, without instruction, something like the sketch at the top will be the result. Avoid all soldier-like arrangement and aim at a less formal group, not only in their positions of two and one, but in their directions and "lines." This is best understood by comparing the two sketches, and noting the alterations made in order to secure variety in grouping, placing in the picture space and in the massing of the tones. Should they be of equal height, variety can be obtained by placing them on different planes, the one nearest the camera made to appear the largest. There is no reason why they should all be facing the camera, but if one is placed with his back to the lens, it is better to put him in the foreground, as shown. Although the effect of a single source of light is desired, a weak flash will be of considerable help in defining the contours in the shadows as well as to relieve the excessive tone contrast.

# Amateur Cinematography

NEWS, NOTES AND MATTERS OF INTEREST FOR ALL CINEMATOGRAPHERS USING AMATEUR CINÉ APPARATUS.

## The Film Lecture By E. APPLEBY.

THERE are certain types of amateur film which are the better for being explained verbally, but, unlike the lantern lecture, the lecturer cannot rely on the next slide to give him the clue or the idea which he may have forgotten. With the ciné film the action is moving all the time, so alertness and an ability for filling in, if required, are essential.

There are, of course, lecture films where the lecture is recorded on the film itself and reproduced by loud-speaker. This solves the problem very nicely, the person responsible speaking into a microphone while the scenes are being shot.

But few amateurs can afford talkie films as yet, although there are some very good sub-standard ones to be had just now, and we must consider the man who has to deliver the talk verbally while the film is being projected.

There is much to be said for reading a script in this case, the composition having been carefully accomplished beforehand, and by sundry cuts or additions timed to fit exactly to the projected film. Even here the lecturer must set his reading to a certain pace. A metronome is a useful accessory for acquiring a steady pace, and after a little practice the orator will find himself able to memorise the regular beat of the little instrument, and to read accordingly at that pace.

In the case of a small show it is quite satisfactory if the lecturer is seated near the projector; his voice will deaden the sound of the instrument, and his light will not affect the screen, which may be an important consideration if the projector is not a very powerful one.

Given a man who knows his subject thoroughly, and who, preferably, assisted in the taking of the scenes in the film, it is quite possible to deliver a lecture without notes. In this case, of course, the speaker is able to stand by the screen and use a pointer where necessary to give special emphasis.

In this case the lecturer should give one or two practice lectures before the real one with the film running; it does not necessarily follow that he must say the same words, but he must get an idea of how much time he can allow for each detail, and restrict himself accordingly.

Clues for the changing of scenes can always be fixed by certain points in certain frames. Thus when one sees a ragged errand-boy coming round the corner of the street on the screen one knows that the scene is very shortly changing to the market square, and the

change of topic must gradually be effected.

It is a great mistake to say too much. The film should be telling its own story, and the lecturer is only an "accessory after the fact," just adding those little spots of explanation where they are needed.

Splendid instruction in this art can be obtained from the news reels shown at most picture theatres. The pithy remarks of the man describing the events not intruding one bit upon the actual picture, but, nevertheless, adding greatly to its interest.

The voice should be somewhat subdued, except, perhaps, if there is some little event working up to a climax, when it can be gradually heightened to fit the scene, but always subsidiary to the screen action. This is quite an art, and one well worth cultivating.

If humour is introduced it must be remembered that should the audience laugh aloud a pause will have to be made in the talking, and due allowance for this should be made, since the picture will go on its way while laughter is proceeding.

One big advantage of the lecture is

that it reduces the number of titles to an absolute minimum, and where the amateur is not very adept at making titles this is an expedient worth the trying. A man or woman trained in elocution should be chosen, preferably, since such people can make every word tell even though they pronounce their words scarcely above a whisper. Such voice control is invaluable in this branch of ciné work.

If the projector is a noisy one, everything possible should be done to reduce this. Rubber mats are effective, or even the expedient of boxing-in the instrument can be tried, as it is very distracting to listen to both speaking and "clicking" at the same time, especially if people are seated fairly close to the projector.

A ciné lecture can be most enjoyable, especially if the film deals with a phase of life with which the audience is unfamiliar, but it is essential, first, that the lecturer knows his subject; secondly, that he can talk to keep pace with the film, and, thirdly, that his lecture does not outshine the film itself.

*The last of Waterloo Bridge. For those amateur ciné workers who have during the past year recorded the demolition of Waterloo Bridge month by month, the present time is appropriate to secure a film of the last phase.*

# Needle-Sharp ENLARGEMENTS!

"PRAXIDOS" AUTOMATIC AND NON-AUTOMATIC ENLARGERS ENSURE PERFECT ENLARGEMENTS, WITH OR WITHOUT A CONDENSER, FROM MINIATURE NEGATIVES.

## HAND-FOCUSSING MODEL

This hand-focussing model Praxidos enlarger can be set for any degree of enlargement without the slightest trouble. The lamphouse can be raised or lowered for coarse focussing and is automatically locked in place when the desired size of enlargement is obtained. Fine focussing is completed by means of the helical focussing mount of the lens. Supplied ready wired for connecting to the electric light supply.

No. 453, with 6-cm.  $f/4.5$  anastigmat lens with iris diaphragm, for  $4 \times 4$  cm. ( $1\frac{1}{2} \times 1\frac{1}{2}$  in.), or smaller negatives, for  $1\frac{1}{2}$  to 8 times enlargements... £8 10 0

No. 454 Praxidos, as above, without lens..... £4 12 6

No. 463, with 7.5-cm.  $f/4.5$  anastigmat lens with iris diaphragm, for  $3 \times 6$  cm. ( $2\frac{1}{2} \times 2\frac{1}{2}$  in.) or smaller negatives, for  $1\frac{1}{2}$  to 6 times enlargements.... £10 0 0

No. 464 Praxidos, as above, without lens..... £5 12 6

No. 473, with 10.5-cm.  $f/4.5$  anastigmat lens with iris diaphragm, for  $3\frac{1}{2} \times 2\frac{1}{2}$  in. or smaller negatives, for 2 to 7 times enlargements... £15 15 0

## For Miniature Camera Negatives "PRAXIDOS" VERTICAL ENLARGERS

### SELF-FOCUSSING MODEL

Praxidos Automatic Enlargers give mathematically exact focussing, the degree of enlargement being determined by raising or lowering the lamphouse—thus the image is always needle-sharp. This eliminates the eye-strain and uncertainty of "hand-and-eye" focussing. By varying the illumination, enlargements of different degrees of contrast can be obtained with the same paper. Any selected part of the negative can be enlarged to any size up to the capacity of the enlarger.

No. 502, Praxidos with 5.5-cm.  $f/3.5$  anastigmat lens, with iris diaphragm, for  $4 \times 4$  cm. ( $1\frac{1}{2} \times 1\frac{1}{2}$  in.) or smaller negatives, for 2 to 10 times enlargements... £17 10 0

No. 498, Ditto, without lens, including condenser for use with Leica lens, 5-cm. focus..... £12 15 0

No. 499, Ditto, without lens, including condenser for use with Contax lens, 5-cm. focus..... £12 15 0

No. 508, Praxidos with 7.5-cm.  $f/3.5$  anastigmat lens, with iris diaphragm, for  $6 \times 6$  cm. ( $2\frac{1}{2} \times 2\frac{1}{2}$  in.) or smaller negatives, for  $1\frac{1}{2}$  to 7 times enlargements... £18 0 0

No. 491, Praxidos with 11.5-cm.  $f/3.5$  anastigmat lens, with iris diaphragm, for  $3\frac{1}{2} \times 2\frac{1}{2}$  in. or smaller negatives, for  $1\frac{1}{2}$  to 7 times enlargements..... £24 0 0

Write for list of Praxidos Enlargers to the distributors for Great Britain:

**SANDS HUNTER & CO., LTD.**  
37, BEDFORD STREET : STRAND : LONDON, W.C.2

# Flashpowder every time for those Xmas snaps, and Johnson's to give that certainty of success.

One 1/- carton contains sufficient powder for making 8 to 10 indoor exposures. No special apparatus required. No previous experience necessary and nothing to go wrong.

1/- and 1/9 cartons of all dealers.  
Complete instructions enclosed.

Write to  
Publicity Dept.  
for full  
particulars of  
FLASHLIGHT  
Competition.  
CASH PRIZES.

# An Easy Method of Producing "Stills"

## from 9.5-mm. Films

By  
R. Y. HOLMES.

**M**OST owners of a 9.5-mm. ciné camera and projector have at times wished to possess permanent prints ("stills") of incidents depicted in the films they have taken. There may be a portrait or a record of an interesting occasion which it is desired to include in the family album of snapshots or to send to friends who were present.

Sometimes a series of films has been taken during the summer holidays, and those people who are included in it may not have the opportunity of seeing the film projected until another year has passed, and possibly may never see it. It is pleasant then to be able to send some "stills" from the film to these friends, and although it will not be quite the same as seeing the moving picture the little photographs will perpetuate happy memories of past events.

They can be very easily produced by any amateur photographer who is in the habit of doing his own developing and printing. There are very few requirements necessary apart from the projector itself. A packet of dry plates,  $3\frac{1}{4} \times 2\frac{1}{4}$  (or, of course, larger if wished, but the small size costing 1s. 8d. per dozen make excellent little contact pictures), an ordinary printing frame to take the size of plate, a piece of white cardboard the same size, a lens cap, a focussing-cloth or any piece of dark material, and the usual dishes and chemicals necessary for developing.

The white cardboard is inserted in the printing frame in the usual manner as for printing from a negative, but, of course, no negative is included with it, and it is then placed upright on its side on a box or on books which rest on the table on which the projector stands. Another larger box or other convenient flat surface forms a back for the frame. The outside of the printing frame containing the white cardboard must face the projector and be parallel with it, forming a miniature projection screen.

The projector and printing frame are now adjusted for position and focussed until the required picture just fills the space occupied by the cardboard screen. At this distance the image will be extremely bright and sharp. It may be necessary to build up the improvised screen-stand with books of various sizes in order to obtain the correct position.

It is a good plan to have one end of the printing frame coinciding with an edge of the topmost book, so that when it is replaced (in the dark or in a red light) with a plate inserted the correct position for it may be easily obtained again.

Now put the lens cap on the lens of the projector (it will hang on it quite comfortably), throw the black focussing-cloth over the entire instrument in order to exclude any extraneous light which might fog the plate, taking care, however, not to cover the front of the

lens with the cloth, light the dark-room lamp and put one of the unexposed plates in the printing frame, having first removed the piece of white cardboard. Replace the printing frame, with plate, in the same position as before, using the edge of the top book as a guide.

The plate should have been placed in the frame with the glass side facing outwards (the thickness of the glass will, at this distance, make no difference to the sharpness), otherwise the resulting print will show everything left-for-right as in a looking-glass.

Make the exposure by taking off the lens cap for the required time. I find that, using a 6-volt accumulator or a dry battery, an exposure of about one second is correct for an ordinary well-exposed "still" on Special Rapid plate of a speed round about 350 H. & D. It may, however, be necessary to make one or two experiments in exposure, but once the correct exposure is found for the particular plate which is in use, negatives can be made very rapidly.

The plate, when exposed, is taken from the printing frame, developed, fixed and dried. This negative is then printed from by contact in the usual way.

Those who have not tried this method will be surprised and delighted at the charming little pictures that can be produced, and it is an especial advantage in the case of close-ups of a person to be able to select the exact expression which it is desired to record as a portrait.

## The Week's Meetings

Wednesday, December 18th.

Bayswater and Paddington P.S. Competition: Best Picture taken Outdoors in Paddington.  
Birkenhead P.A. Social.  
Birmingham P.S. (Ciné). Films taken at Home and Abroad. A. T. Ratcliff.  
Borough Polytechnic P.S. Discussion—The Exhibition.  
Brighton and Hove C.C. "They all used the same negative!"  
Carlisle and County A.P.S. "Experiments in Three-Colour Carbro." A. Ashby.  
Chorley P.S. L. and C. Prints.  
Coventry P.C. "Eyes and No Eyes." C. L. Clarke.  
Croydon C.C. Season's Outings Prints and Transparencies Competition.  
Darwen P.A. "Snowdon and its Pictorial Possibilities." J. Ainger Hall.  
Dartmouth L. and D.S. (P.S.). Photographic Alliance Portfolio of Prints.  
Dennistoun A.P.A. "Enlarging and Slide-Making. Hints and Helps." W. S. Crockett.  
Edinburgh P.S. "A Talk on the West Indies." V. L. Alexander.  
G.E. Mechanics' I.P.S. "Book Illustration by Photography." H. W. Bennett.  
Ilford P.S. "The Choice of a Lens." J. Ainger Hall.  
Kodak Works P.S. "Polarised Light and the Polar Screen." E. E. Jelley.  
Partick C.C. Print and Slide Competition.  
S. Suburban and C.P.S. "Sea Land Seen Again." G. H. Dannatt.  
Tunbridge Wells A.P.A. Members' Slide Competition.  
York P.S. "A Talk on the Leica Camera." H. L. Kettle.

Thursday, December 19th.

Armley and Wortley P.S. Slide-Making Competition for Members.  
Ashton-under-Lyne P.S. L. and C.P.U. Travelling Exhibition.  
Aston P.S. "A Warwickshire Medley." Lewis Lloyd.  
Ayr P.S. Council Meeting.  
Bolton C.C. Lectures by Members.  
Bury P.S. "Home Portraiture." T. C. Egan.  
Camberwell C.C. A.G.M.  
Cardiff C.C. Christmas Social.  
Coatbridge P.A. G.D.U. Slides and S.P.F. Colour Slides.  
Greenock C.C. Members' Gallery Night.

Hackney P.S. A Fireside Chat.  
Hamilton P.S. "Bird Photography." R. MacLeod.  
Monklands P.S. G.D.U. Slides and S.P.F. Colour Slides.  
Todmorden P.S. Christmas Eve Social.

Wednesday, December 25th.

Dennistoun A.P.A. Whist Drive.

# Readers' Questions ANSWERED

**GENERAL.**—All communications for the Editor should be addressed: "The Editor, *The Amateur Photographer and Cinematographer*, Dorset House, Stamford Street, London, S.E.1," and in every case, without exception, must give the name and address of the writer.

**CONTRIBUTIONS.**—The Editor is glad to consider original up-to-date manuscripts on photographic subjects. All contributions must be typewritten, or in very legible handwriting on one side of the paper only. Letters or communications arising out of matters already appearing in the paper are not paid for. The Editor disclaims legal responsibility for the safety of matter submitted to him, but he will endeavour to return rejected manuscripts, etc., when a stamped addressed envelope is enclosed. MSS. or prints that are not actually accompanied by a stamped wrapper or envelope can in no case be returned. Reproduction fees for prints are only paid by arrangement beforehand. The sending of a print, without any condition stated, will be taken as permission to reproduce it without fee.

**ENQUIRIES AND CRITICISM.**—Advice, Criticism and Information are freely given, but the following conditions should be read carefully before applying, as any communication which does not comply with the rules must be ignored.

(1) See "General" above. (2) Every question and every print for criticism must be sent separately through the post, and must be accompanied by a *separate* stamped addressed envelope. No exception can be made in any case to this rule, except so far as enquiries or prints from Overseas are concerned. (3) Neither enquiries nor prints for criticism must be enclosed with competition prints. (4) On the back of each print sent for criticism, in addition to the name and address of the sender, must be the title (if any), and the criticism coupon from the current issue. (5) Enquiries should be clearly written, on one side of the paper only, and should be specific and not general. Such enquiries as "How can I take interiors?" or "Can you give me some hints on outdoor portraiture?" are too general to be dealt with in this section. (6) All envelopes should be distinctly marked "Query" or "Criticism," as the case may be. (7) Prints are sent for advice or criticism on the distinct understanding that by so doing permission is given for their reproduction without fee. We endeavour to deal promptly with enquiries, but cannot undertake to answer by return of post, nor can we give precedence to any enquiry.

A selection of those replies is printed each week, but all questions are answered by post. Enquiries from abroad must contain a coupon also, but it need not be from the current number, and should be cut from the latest issue to reach the enquiry.

## Pictorial Composition.

Can you furnish me with the name of a book that deals with the art side of photography like the series of "Picture Points" that appears every week in "The A.P."? J. H. MacR. (Lancashire.)

We know of no book that deals with the subject of composition, etc., in anything like the same way as it is being treated week by week in our pages. There are certain books which deal mainly with the art side of photography, but we hesitate to recommend one in preference to all the others. We think your best plan will be to write to Messrs. Sands Hunter & Co., Ltd., of 37, Bedford Street, Strand, London, W.C.2, and the Fountain Press, of 19, Cursitor Street, London, E.C.4, for their catalogues, in which you will find a list of all current books classified according to subject.

## Sky Filters.

Can you explain the functioning and effect of a graduated sky filter when used in front of the lens? W. W. (London.)

The question you raise cannot be dealt with adequately in the form of a reply, although it has at times been explained at considerable length in our pages. We may say, briefly, however, that the effect of a sky filter depends mainly upon its distance from the lens. If it is close to the lens it may function exactly the same as a uniform filter, but as it is moved farther from the lens its action becomes more selective.

## Reduction on Sepia-toned Prints.

Is there any method of local reduction that I can use on a sulphide-toned print, similar to the Farmer's reducer used on ordinary black-and-white prints? C. M. (London.)

We think you are likely to cause trouble with a sulphide-toned print if you use any method of local reduction. What we would suggest is that you make the necessary modifications on the print before toning, instead of attempting it afterwards.

## Bolting Silk for Diffusion.

I have been quite unable to obtain bolting silk in my neighbourhood as fine as the two samples enclosed. Can you kindly tell me who can supply it? G. B. (Norfolk.)

We have obtained bolting silk for diffusion purposes from such firms as Messrs. Ensign, Ltd., 88-89, High Holborn, London, W.C.1; Messrs. Kodak Ltd., Kingsway, London, W.C.2, and Messrs. Jonathan Fallowfield, Ltd., 61-62, Newman Street, Oxford Street, London, W.1, but we doubt whether, in any case, the mesh is the same as that of either of the samples you send. If, however, you will apply to these firms they will tell you what is available.

## Steel Developing Tanks.

Is there any objection to plain steel being used for a developing and fixing tank? It would, of course, be kept free from rust and scales. R. W. (Wolverhampton.)

A steel tank that is not covered with anti-acid enamel would certainly be affected by some of the solutions, and is therefore not considered desirable. Probably the best tanks are of monel metal (a patent, stainless metal), but the majority of tanks are brass and heavily nickel-plated.

## Diffusion in Enlarging.

I have tried to get a soft definition on my enlargements by projecting through muslin held between lens and paper, but although I keep the muslin moving and have given exposures for as long as fifteen minutes, I cannot get the desired effect. Can you suggest the reason? L. S. (London.)

Your exposures seem unusually long, and you cannot expect to keep anything moving for so long a time. If you stretch either a single or a double thickness of black chiffon over the front of the lens you will probably get all the diffusion you want. Bolting silk can also be used. Chiffon permits shorter exposures than muslin. Full aperture of the lens should be used.

## Hypo-Alum Toning.

As my attempts at hypo-alum toning have given me only purple tones, can you give me an alternative formula? K. R. (Persia.)

The formula you have got will be difficult to improve on, and if it is properly used the colour of the print will depend upon the time for which you continue toning.

## Process Blocks.

Can you advise me on a suitable handbook on the block-making process, as I wish to illustrate a book from photographs? H. M. (Bishop's Stortford.)

The making of half-tone process blocks is a highly technical business requiring considerable experience and expensive plant and materials. It is a matter not lightly to be attempted by the amateur unless he intends to take it up seriously. A firm that specialises in books and materials for reproduction processes is Messrs. Hunter-Penrose, Ltd., of 109, Farringdon Road, London, E.C.1.

## Emulsion Speed Equivalents.

Can you supply me with a conversion table for emulsion speeds for the various systems? Regarding chloro-bromide printing, I have difficulty in obtaining sufficient contrast, although I use an M.Q. bromide developer. Can you suggest any reason? T. G. (Worcester.)

The whole subject of plate and film speeds is in a state of confusion, and the number to which you refer is probably the Continental H. & D., which is entirely different from our own. Ilford, Ltd., issue a useful table of comparative speeds that may help you. We do not know why you have difficulty in getting sufficient contrast on chloro-bromide paper from negatives that work well with normal bromide. Judging from the rest of your letter, you may be over-exposing and under-developing. Further, you will not get the right results with chloro-bromide papers by using an M.Q. developer suitable for bromide, which is altogether unsuitable. This is probably why you have to resort to toning.

## Enlarging.

I am buying a quarter-plate enlarger to use with two sizes of negatives, quarter-plate and Ensign Midget size. Can you tell me if it will be quite suitable for the smaller negative and what size enlargement it will give me? It will enlarge from 4-plate to 12x10 in. S. L. (N. London.)

You can easily use the small negative as well as the quarter-plate one. The degree of enlargement can best be found by trial, although the calculation is quite simple. If you can enlarge from quarter-plate to 12x10 in., this is enlarging three diameters, so that the biggest enlargement you can get with the smaller negative will be three times its length and breadth.

## Half-watt Lighting.

What exactly is meant by the term of "half-watt" lighting? E. M. R. (Walthamstow.)

The earlier type of electric lamps gave one candle-power of illumination per watt, the unit of electrical consumption, but with the introduction of gas-filled electric lamps this ratio has been increased to one candle-power per half-watt of consumption. Hence the term of "half-watt" lighting.

## Business Notices

### Publishing

**OFFICES.**—Dorset House, Stamford Street, London, S.E.1. Telegrams: "Amaphot, Sedist, London." Telephone: Waterloo 3333 (50 lines).  
**PUBLISHING DATE.**—"The Amateur Photographer and Cinematographer" is on sale throughout the United Kingdom every Wednesday morning.  
**SUBSCRIPTION RATES.**—British Isles 17/4 per annum, Canada 17/4, other countries abroad 19/6 per annum, post free.  
**REMITTANCES.**—Cheques, etc., should be crossed and made payable to Iliffe and Sons Ltd.

"The Amateur Photographer" can be obtained abroad from the following: **UNITED STATES:** The International News Co., New York. **FRANCE:** W. H. Smith & Son, 248, Rue Rivoli, Paris; Hachette et Cie, Rue Reaumur, Paris. **BELGIUM:** W. H. Smith & Son, 71-75, Boulevard Adolphe Max, Brussels. **AUSTRALIA:** Gordon & Gotch, Ltd., Melbourne (Victoria), Sydney (N.S.W.), Brisbane (Queensland), Adelaide (S.A.), Perth (W.A.), and Launceston (Tasmania). **NEW ZEALAND:** Gordon & Gotch, Ltd., Wellington, Auckland, Christchurch and Dunedin. **INDIA:** A. H. Wheeler & Co., Bombay, Allahabad and Calcutta. **CANADA:** Imperial News Co., Toronto, Winnipeg and Vancouver; Benjamin News Co., Montreal; Gordon & Gotch, Ltd., Toronto. **SOUTH AFRICA:** Central News Agency, Ltd.

### Displayed Advertisements

Communications on Advertisement matters should be addressed: The Advertisement Manager, "The Amateur Photographer and Cinematographer," Dorset House, Stamford Street, London, S.E.1. Copy for displayed advertisements for the issue of any particular week must reach Dorset House by the first post on Tuesday morning in the week previous. Rates and conditions will be sent upon application.

### Prepaid Advertisements

#### SALE AND EXCHANGE: AMATEURS ONLY—

12 words or less.....1/-

1d. for every additional word.

#### PROFESSIONAL AND TRADE:

12 words or less.....2/6  
 2d. for every additional word.

Each paragraph is charged separately.

**SERIES DISCOUNTS** are allowed to Trade Advertisers as follows on orders for consecutive insertions, provided a contract is placed in advance, and in the absence of fresh instructions the entire "copy" is repeated from the previous issue: 13 consecutive insertions, 5%; 26 consecutive, 10%; 52 consecutive, 15%.  
 All advertisements inserted in these columns must be strictly prepaid and posted to arrive at the Head Office, Dorset House, Stamford Street, S.E.1, not later than first post Friday for the following week's issue, or one day earlier at the Branch Offices, 19, Hertford Street, Coventry; Guildhall Buildings, Navigation Street, Birmingham, 2; 280, Deansgate, Manchester, 3; 26a, Renfield Street, Glasgow, C.2.

Advertisements are inserted, as far as possible, in the order received, and those received too late for one issue, or crowded out, are published in the first following in which there is space. The Proprietors retain the right to refuse or withdraw advertisements at their discretion.

Postal Orders sent in payment for Advertisements should be made payable to **ILIFFE AND SONS LTD.**, and crossed

& Co.

Notes being untraceable if lost in transit, should not be sent as remittances.

The Proprietors are not responsible for clerical or printer's errors, although every care is taken to avoid mistakes.

**BOX NUMBERS.**—For the convenience of advertisers, letters may be addressed to numbers at the office of this paper. When this is desired, the sum of 6d. to defray the cost of registration and to cover postage on replies must be added to the advertisement charges, which must include the words: "Box 000, c/o 'The Amateur Photographer'." Replies should be addressed: "Box 000, c/o 'The Amateur Photographer,' Dorset House, Stamford Street, London, S.E.1," and these letters will be simply forwarded by us to the advertiser. It must be understood that we do not deal with the correspondence in any other way, nor accept any responsibility in connection with the advertisement. Readers who reply to Box No. advertisements are warned against sending remittances through the post except in registered envelopes. In all such cases the use of the "Deposit System" is recommended.

### Special Note

Readers who reply to advertisements and receive no answer to their enquiries are requested to regard the silence as an indication that the goods advertised have already been disposed of. Advertisers often receive so many enquiries that it is quite impossible to reply to each one by post. When sending remittances direct to an advertiser, stamp for return should also be included for use in the event of the application proving unsuccessful.

### Deposit System

Readers who hesitate to send money to advertisers in these columns may deal in perfect safety by availing themselves of our Deposit System. If the money be deposited with "The Amateur Photographer and Cinematographer," both parties are advised of its receipt. The time allowed for decision is three days, counting from receipt of goods, after which period, if buyer decides not to retain goods, they must be returned to sender. If a sale is effected, buyer instructs us to remit amount to seller, but if not, seller instructs us to return amount to depositor. Carriage is paid by the buyer, but in the event of no sale, and subject to there being no different arrangement between buyer and seller, each pays carriage one way. The seller takes the risk of loss or damage in transit, for which we take no responsibility. For all transactions up to £10 a deposit fee of 1/- is charged; on transactions over £10 and under £50 the fee is 2/6; over £50 and under £75, 5/-; over £75 and under £100, 7/6; and on all transactions over £100, one-half per cent. All deposit matters are dealt with at Dorset House, Stamford Street, London, S.E.1, and cheques and money orders should be made payable to Iliffe and Sons Ltd.

## IMPORTANT NOTICE

Owing to the Christmas Holidays, the next issue of "THE AMATEUR PHOTOGRAPHER" (dated December 25th) must be closed for press earlier than usual.

In accordance with the notice that appeared last week, the latest date upon which MISCELLANEOUS ADVERTISEMENTS could be accepted for the above issue was

FIRST POST, WEDNESDAY, DECEMBER 18th.

## CAMERAS AND LENSES

**ENSIGN** Cameo de Luxe 3½×2½, Compur, 1 to 1/250th sec., double extension, 12 plate-holders, F.P.A., roll holder, Alpha and Beta filters, lens hood; perfect condition; nearest £4/10; deposit.—Gregory, 13, Plumley Drive, Manchester, 16. [1790]

**NAGEL** Pupille, f/3.5, reflex attachment, 2 cases, Compur shutter, 16 on V.F., £11; cost £25.—Green, 18, Prospect Rd., N.W.2. [1796]

## WARNING

We have received many complaints from our readers in regard to the business methods of Mr. R. L. Green, trading as R. L. Green's Photographic Exchange, of 218, Fore Street, Edmonton, London, N.18, or (possibly with different initials) as Cine Photo Supplies, 4, Holborn Place, High Holborn, W.C.1.

For some considerable time we have refused to insert his advertisements in "The Amateur Photographer and Cinematographer," and from the complaints we have received it would appear that his practice is to communicate with private advertisers having goods for sale, offering to take such goods in exchange for others, or to purchase for cash. Readers are advised to ignore all such offers from this quarter.

## CAMERAS AND LENSES

**AGFA** Speedex O Film Camera, f/3.9, Compur, 1 to 1/300th, ruby and yellow filters, Ensign tank, 17 new films; cost £8; as new, bargain, £5.—Sunny Cot, Albert Drive, Deganwy. [1793]

## CINEMATOGRAPH APPARATUS

Trade.

ILLUSTRA Special Christmas Offer!

DOUBLE Claw Projector of no mean standing,  
is fitted for showing super reels, can be used  
on all mains or with 12-volt accumulator.

THE Reproduction is of high quality, thanks to  
the super lens incorporated.

CRYSTAL Beaded Screen Panel of an unusually  
high quality and perfect projection is assured.

AS every new owner of a Cine desires to give a  
display we add a new Mickey Mouse film.

OUTFIT is supplied with full instructions and  
is made as a Special Offer complete, post  
paid upon receipt of remittance of 90/-, or sent  
c.o.d.

ILLUSTRA ENTERPRISES, 159, Wardour St.,  
London, W.1 (facing Film House, Oxford St.  
end). Not a shop, but a warehouse packed with  
motion picture equipment. Phone: 6889 Ger-  
rard. Your inspection invited. [1853]

# Portraits at home

*The Exposure 1/125th Sec. F/4.5*

Look at this delightful study. Subjects like this can be taken indoors on Ilford Hypersensitive Panchromatic Plates or Selo Hypersensitive Panchromatic Roll Film, with the aid of the new Selo Lighting Set. It is all very simple, as the diagram shows. Note the position of the camera and the arrangement of the Lighting Set.

**FREE.** An interesting 32 page booklet "Winter Photography—Picture Making at night—indoors and out" sent post free.

## SELO LIGHTING OUTFIT

This is a lighting outfit of superior design, sturdy manufacture, great adaptability and utility and better value. The stand is a sound, solid casting and the lamp and reflector can be adjusted to any angle. It can be supplied with special Photoflood lamp to suit any voltage and is equipped with a double plug, instantly adaptable for a lighting point or plugging into any electric bulb socket.

*Ask your dealer to show you this fine outfit. Complete* **17/6**

## THIRTEENTH EDITION WALL'S DICTIONARY OF PHOTOGRAPHY

AND REFERENCE BOOK FOR THE AMATEUR  
AND PROFESSIONAL PHOTOGRAPHER

Edited and largely re-written by  
F. J. MORTIMER, Hon. F.R.P.S.

All the latest photographic principles are incorporated in the present edition, which includes up-to-date information on such recent developments as infra-red, high-speed and colour photography. The volume provides practical information in dictionary form on every phase of the subject—technical, pictorial, scientific and general, and is in itself an explanatory index to all terms, formulæ, etc. Its contents are made readily accessible by the extensive use of cross references.

Cloth Boards. Crown 8vo. 645 Pages.

PRICE 7/6 NET By post 8/-

From all leading Booksellers, or direct from the Publishers  
**ILIFFE & SONS LTD., Dorset House, Stamford St., London, S.E.1**

## THE CONTAFLEX TO INTENDING PURCHASERS

The firm of R. G. Lewis—exclusive specialists in miniature apparatus—have, ever since its first appearance, been firm admirers of Messrs. Zeiss Ikon's Contax camera. This being the case, our enthusiasm for the Contaflex is, as can be imagined, quite unbounded.

Not only can we supply any of the three models immediately from our stock, but we are in the position, without any delay, to fit out the fortunate possessor with most of the accessories he (or she) is likely to require. This is attributable to the fact that most of the Contax accessories can be used with the Contaflex, and we keep several hundred Contax bits and pieces (not to mention 35 different varieties of film) permanently in stock.

Finally, we quite realize that claims regarding the generosity of part-exchange allowances are both universal and overdone. But, all the same—ask any one who has ever done business with us. Better still, drop us a line about the present camera whose place the Contaflex will fill so well.

R. G. LEWIS, The Miniature Camera Specialist,  
202, HIGH HOLBORN, LONDON, W.C.1

## The Leitz "FOCOMAT" ENLARGER

With Automatic  
Focusing.

Takes the standard 5-cm. focus Leica lens, screw-in fitting, automatic focussing adjustments scaled from 2 diameters up to 10 diameters. Will take negatives 18×25 mm., 24×36 mm., 3×4 cm., and 4×4 cm. Metal racks can be supplied for any of these sizes.

£16:6:6

Nine monthly payments of 38/1.

## THE FOTH-DERBY FOCAL-PLANE AN IDEAL SPORTS CAMERA

Takes 16 pictures on V.P. Film.

F/3.5 Foth anastigmat, self-capping focal-plane shutter, with delayed-action device, speeds 1/25th sec. to 1/500th sec. and B. Very compact. £5:5:0

Nine monthly payments of 12/3.

The Zeiss Ikon

## SUPER IKONTA

530 Super Ikonta with the New Rapid shutter.

No. 530. Takes 16 pictures on standard 3½×2½ roll films. Fitted f/3.5 Zeiss Tessar anastigmat.

Compur Rapid shutter, speeds 1 to 1/500th sec., T. and B., self-erecting front, built-in range-finder, ensuring critical focus for every picture. £18:12:6

Nine monthly payments of 43/6.

## THE ROLLEIFLEX

Absolutely automatic, with Rapid Compur shutter, 1 to 1/500th sec., T. and B., f/3.5 Zeiss Tessar anastigmat, takes 12 pictures 2½×2½ on standard roll films, can also be adapted for plates.

£25

Nine monthly payments of 68/4.

## THE CONTAFLX

The ONLY Camera with built-in  
Photo-Electric Exposure Meter.

Takes 36 pictures 1×1½ in. on standard 35-mm. film. Metal focal-plane shutter, speeds 1 to 1/1,000th sec. and Time, arranged very conveniently in four groups, with built-in delayed-action release. The shutter and film-winding mechanism are coupled together, as with the more familiar Contax. All-metal folding focussing hood, complete with magnifier. The front and back of the finder hood form an Albada finder when using camera at the eye-level. Quick-action interchangeable lens mount taking lenses from 2 to 5½ in. focal lengths, fitted with 3½-in. f/2.8 finder lens. Special condenser type focussing screen, which gives a very bright image, even at the corners.

## 62, PICCADILLY, EXPIRATION OF LEASE

We have to announce that the branch at 62, Piccadilly, will be closed as from December 31st, and the business transferred to our new premises

## 81, STRAND, W.C.2

The new shop is equipped to give every facility to our clients, and is undoubtedly

## THE FINEST PHOTOGRAPHIC and CINE STORE in the COUNTRY

The Piccadilly staff will also be at your service at 81, Strand.

## The New WESTON Photronic Exposure Meter No. 650

UNIVERSAL or LEICA

(For Still or Cine cameras) (For Leica cameras)

### NEW FEATURES:

Increased Sensitivity. Simpler to use. Thinner. £5:19:0

Complete with instructions book.

Nine monthly payments of 13/11.

THE WESTMINSTER ARE MINIATURE  
CAMERA SPECIALISTS and TAKE ANY  
SALEABLE APPARATUS in PART EXCHANGE  
AT TOP PRICE ALLOWANCE VALUES.  
ALL THE LATEST MODELS IN  
STOCK, NEW AND SECOND-HAND

## The New Model IIIa LEICA

Shutter Speeds 1 to 1/1,000th sec.

The Precision Camera.

F/2 Summar, automatic focussing, interchangeable lens mount, all chromium plated. £43:0:0

Model III, f/3.5 Elmar anastigmat, automatic focussing, interchangeable lens mount, self-capping focal-plane shutter, speeds 1 to 1/500th sec., T. and B. £31:16:0

Nine monthly payments of 74/2.

## The Westminster SUPERKINO

DAYLIGHT-  
LOADING  
Developing Tank

For all 35-mm. cine films up to 5 ft. in length, as used in the Leica, Contax, Contaflex, Retina, Baldwin, etc. COMPLETE £3:3:0

## SPECIAL OFFER Weston Meters UNIVERSAL or LEICA MODELS

Latest pattern, new and unsoiled. £4:17:6

(Carrying maker's guarantee). List prices £6 15s. and £7 respectively. Surplus stock, limited number only, complete in case with instructions.

## THE NEW ROLLEICORD

F/3.8 Zeiss Triotar anas., Compur shutter, speeds 1 to 1/330th sec. T. and B. £14:0:0

Nine monthly payments of 32/8.

The new Rolleicord takes 12 pictures on standard 3½×2½ roll films, and is also adapted to take the Rolleiflex plate back and other Rolleiflex accessories, excluding the cine film attachment and angle mirror.

WEDNESDAY, DECEMBER 23<sup>RD</sup>, 1935.

Copyright—Registered as a Newspaper  
for transmission in the U.K.

VOL. LXXX. No. 2459.

THE next number of *The Amateur Photographer* (published on Wednesday, January 1<sup>st</sup>, 1936) will be the first part of a new volume. In this, the last issue for 1935, we take the opportunity of offering the season's greetings to all our readers, at home and in every part of the world. We hope that the year that is almost ended has been a photographically satisfactory one for them, and that the new year that is so nearly at hand will be even more gratifying in results. We trust also that the friendship for our weekly production freely expressed by so many thousands of our supporters in the past will be still more firmly cemented in the future. We wish them all a happy and successful year with continued enthusiasm for the King of Hobbies.

### "Photograms of the Year" Exhibition.

As in previous years, the originals of the pictures reproduced in the new volume of *Photograms of the Year*, just published, are being exhibited at The Camera Club, 17, John Street, Adelphi, London, W.C. The exhibition will remain open until January 17<sup>th</sup>, 1936, and all readers of this popular photographic annual should, if they have the opportunity, make a point of visiting the show. Not only will they see a remarkably fine little exhibition of the cream of the year's work, but will be able to compare the originals with the pictures in the book and study the technique of the prints for themselves. The exhibition is open daily from 10 a.m. to 6 p.m., and admission is free.

### The Other Half.

A visitor to the recent autumn shows in London exclaimed to a

## TOPICS of the Week

THE LAST POST.

*A Christmas Eve snapshot.*

leading man in the photographic world, who passes on the story, "Yes, very pretty. But the great grudge I have against photography is that you photographers recognise only one-half of life. Your pictures are good and striking and sometimes powerful, but all they show is a world at leisure, or at any rate a comfortable world. You never see in photographic exhibitions pictures representing unemployment, sickness, economic misery. For exhibition photographers at any rate, the distressed areas do not exist. You show plenty of quiet old corners, and hills and trees, and girls on the beach, but all the stark things which affect and embitter the lives of thousands of your countrymen are omitted." We must admit there is some truth in that indictment. The photographer, on the whole, has gone in for the comfortable things of life, and shut his camera eye to the unpleasant. What would happen if such things were shown? This particular critic was in no doubt at all. "A photographic exhibition which showed such things instead of being just polite would get itself talked about, and make a more significant contribution to civilisation than photography has yet done." Well, we wonder.

### A Fallen Idol.

This generation has got so accustomed to see idols toppling over that it is prepared for almost anything. Yet it was a shock the other day to hear Mr. A. C. Banfield declare at a public meeting that pyro was a thoroughly bad developer. We were brought up on pyro. In our youth there was nothing more revered in photography. It was sworn by—and now

it is sworn at. Mr. Banfield says that it has come down to us from the dark ages, and retains our respect merely because it is old. The truth may be that like other old things it fails to adjust itself to the new times, in particular to that kind of chemical conjuring in which Mr. Banfield is an adept. Pyro will not give you a developed image while you count up to about three.

using the word "amazing," but here is an instance where hardly any other word fits the case. From the technical point of view, said our informant, they were the best photographs he had seen during a long acquaintance with courts of law. Photography is now one of the principal weapons in police investigation.

### Photography in America.

Our genial friend, Dr. C. E. K. Mees, who is in this country lecturing on photography to juvenile audiences at the Royal Institution, tells us that a national society of photographers has been formed in the United States by the federation of the existing photographic clubs. These clubs have increased very largely in numbers during recent years, and federations of clubs have been formed for arranging exhibitions, or salons as they are more generally called on the other side. The size of the United States has

been against national societies or national exhibitions. There is no city in the States which is comparable in position to that which London holds to England. New York is the shipping and importing centre, Washington the federal capital, Chicago perhaps the industrial metropolis. Instead, therefore, of frequent meetings, like societies on a national scale in this country, the photographers meet once or twice a year, the meeting lasting from three days to a week. Photography in the United States, says Dr. Mees, is growing tremendously, and in no respect is this more evident than in pictorial work. Photographic periodicals are increasing their circulation, and there is a marked revival of interest in advanced amateur work. Miniature cameras are in great demand, and Dr. Mees comments a trifle satirically on the zeal of miniaturists to get the smallest picture possible, and then to enlarge it up to an utterly abnormal extent.

### Police Photographs.

No comment must be made, of course, upon the evidence given in a charge of murder which has filled columns of the newspapers with gruesome details, but one who has been concerned closely with the proceedings at Lancaster from start to finish tells us that what impressed him most of all was the amazing technical excellence of the photographs exhibited to the magistrates. Journalists have been castigated by Mr. A. P. Herbert, M.P., for

## READERS' PROBLEMS

Selected queries on topics of general interest to readers will be fully dealt with on this page week by week. Other replies appear as usual on the last page.

### Testing a Safelight.

*Being rather suspicious of my dark-room lamp I tested it, and the plate herewith shows the result. Half of the plate was covered while it was exposed for two minutes rather close to the lamp. Does not the fog indicate that the light is unsafe?*

S. A. S. (Boston.)

Although the plate shows very marked fog, we cannot agree that it follows that the light is unsafe for developing under proper conditions. The details of your experiment are vague. You do not state the make and speed of the plate, nor the distance from the lamp during exposure. "Rather close" is not a distance.

Further, the test was an unreasonable one. When plates are properly developed they should never be exposed to the light for two minutes at any distance, let alone a rather close one. Even if you are relying on observation, the plate need only be brought anywhere near the light for a few odd seconds. Once the plate has been immersed in the developing solution its sensitivity is reduced by half or more; and during most of the development period the dish should be covered.

We would suggest a further test, and will assume that you select a distance of 20 in. from the light to make the exposure. Put the plate in a printing-frame, and cover about one-third of its surface with a strip of black paper, running lengthways of the plate.

Now, at 20 in. from the lamp, make a series of "strip" exposures, as is frequently done to find the correct exposure for bromide paper. The exposures may be 10, 20, 30, 40 and 50 seconds. Keeping the dish covered, develop the plate with the solution generally used, and for the time given to an average negative.

Fix and rinse the plate, and examine it by reflected light from

a sheet of white paper. The strip which had 30 seconds' exposure should show no more deposit than the section covered with black paper. If there is evident fog on the 20-second strip, and still more on the 10-second strip, this indicates that the safelight needs modification, either by reducing the power of the lamp, using a supplementary filter of red, green, or yellow, or changing the original filter altogether. Should any alteration be made it is advisable to repeat the test under the new conditions to see if the result is now satisfactory.

### Reticulation.

*Can you explain the cause of the curious "crinkled" appearance of the negative sent herewith? It was still more "in relief" while the film was wet, but even now the marks show badly in the print.*

F. W. (Ongar.)

The negative is a rather bad case of what is known as "reticulation" of the film. We cannot say what is the cause in this case, as there are several conditions which may give rise to the trouble. If we name some of these you may be able to identify the one most likely to occur in your own procedure.

A common cause is the transfer of the negative from one liquid to another of considerably higher or lower temperature. The sudden expansion or contraction of the gelatine is uneven, hence the "crinkles." In extreme cases the film may ultimately leave its support altogether. Similar trouble may arise if the two liquids, while of about the same temperature, are of very different densities, or if one is acid and the other alkaline. If a fixing-bath is made alkaline by developer being repeatedly carried into it the same trouble may arise.

Immersion in alcohol, followed by hardening in an alum or formalin solution, is often a partial or even a complete remedy if the reticulation has not gone too far.

# IN RETROSPECT

The year that now draws to a close has been an eventful one for amateur photography, and during the past twelve months much progress in many directions has been made. The following article reviews in brief what has been accomplished and what is desirable to ensure future success.

**W**HILE it behoves the people who practise any hobby always to be looking ahead, it is sometimes interesting to adopt the retrospective attitude and observe the changes that have taken place in the passage of time. In no hobby is this more enlightening than the photographic one.

## Materials of To-day.

Look, for a moment, at the remarkable advance that has been made in the direction of sensitive materials. The amateur of the old days had but two or three kinds of plate to choose from, while the present-day workers have innumerable plates, roll and cut films of all speeds and varieties, and grades of printing paper which make it almost impossible not to get a reasonable print even from the most unpromising negative.

Perhaps the great advance in the past year has been the growth in popularity of the chloro-bromide paper. Given the correct negative these papers have shown themselves capable of producing beautiful effects with the minimum of trouble. Makers have introduced many and varied kinds and surfaces, and the amateur has been able to work in a medium which will give him results of magnificent quality with little drudgery.

## Cameras.

The past year may be regarded as the most successful one for the miniature camera world. Leicas and Contaxes abound, and the fact that large exhibitions of pictures taken by these cameras have been travelling the length and breadth of the country proves that they are a definite factor in the photographer's consideration. Other types, such as the square-form twin-lens cameras, have also proved extremely popular, and it is interesting to note that one of the largest newspaper competition prizes was won by an entry taken with a Rolleiflex. All of these miniature cameras

are a triumph of modern manufacturing, and the photographer, in the main, has not been slow to take advantage of them.

## Lighting Sets.

Photoflood lamps have come into their own this year owing mainly to the reduction in prices and the universal supply of electricity. The home portraitist is in a better position than ever he was with regard to lighting, studio effects being possible in even an ordinary room. Some very useful sets have been placed on the market, and one of the latest costs but 17s. 6d., so that even the humble worker is able to take advantage of this stride forward.

Photoflash bulbs have maintained their popularity, and with some amateurs are superseding flash-powder, leaving the worker in the position of being able to choose which flashlight medium suits him best.

## Enlarging Attachments.

The miniature camera has brought in its train a number of enlargers and enlarging attachments. Never was the amateur more comprehensively catered for in this direction than during this past season. Modest attachments for fitting on to the camera, costing only two or three pounds, have brought the joys of enlarging within the reach of all. Gone is the day of the bulky horizontal enlarger; neat, precision-made instruments have taken its place. Nevertheless, the old horizontal was a good servant, and the new-comers will certainly turn out no better work than their predecessors.

## New Processes.

The year has not produced many new processes, however, and one realises that photography has reached such a high pitch of excellence that new processes are going to be very difficult to evolve in the future. Perhaps the greatest venture has been the entry of the

Dufaycolor and Agfacolor roll films on the market. This is a revolutionary step, which brings nearer the day when colour photographs will be commonplace, but, nevertheless, that day is still a long way off, and the experimentally-minded worker has a large sphere for his inventive genius.

## Our Own Work.

The most important question the amateur has to ask himself is whether he has been taking full advantage of all these great advances. Has the manufacturer been studying his requirements in vain?

Large numbers of workers have welcomed the wonderful materials produced, and have worked delightedly on new subjects.

But there are many amateurs who are quite content to snap the ordinary everyday things they have been used to, print them on glossy gaslight paper, and stick them firmly and unenthusiastically into an album. What a tremendous pity it is that these amateurs cannot realise the amazing value of the materials placed into their hands.

In retrospective vein, let us consider all those prints we made last year, and decide how many of them were anything more than mediocre. Surprising, isn't it? The amateur who has just got so far, and attained the satisfaction of producing his own prints, is in the dangerous position of becoming apathetic if he does not bestir himself and seek new worlds to conquer. It is extremely easy to drift into this attitude, and to produce a few holiday prints each year, and then to make but spasmodic attempts at work for the rest of the year.

Let us therefore seize the opportunities so abundantly placed before us. Let us while reflecting backwards resolve forward that the manufacturer shall not have produced such superlative material in vain. Let the New Year be a photographic one of real progress.

# Table-Top Photography at CHRISTMAS

By T. WALKER  
and A. S. JOHNSON.

**D**URING the Christmas holidays endless opportunities for "at home" photography occur, and table-top work will always prove popular both for the photographer and for other members of the family who can look on and help.

Fig. 1.

Here is a simple phase of table-top photography that will provide plenty of amusement. All that is needed are some match-boxes and matches, a few odds and ends for "scenery," and the camera. Any camera and lens will be suitable for match-box photography.

It is work that can be done in comfort by the fireside in the evenings, and while quite excellent practice it is also most amusing to think out situations of a snappy kind

Fig. 2.

in which to pose the little match manikins. Provided the correct exposure has been worked out almost any illuminant can be used, or, of course, flashlight or daylight work can be done.

Those readers who possess ciné cameras and projectors can produce their own match comedies or dramas by the "one turn one picture" method. Motor cars, aeroplanes, carts, wheelbarrows, houses, trees, animals, etc., can all be made up from matches and used in the scenes, and all sorts of amusing situations can be thought out.

The illustrations explain themselves. In No. 1 we see the heroine approached by her two suitors, each offering a bouquet. In No. 2 the suitors are engaged in a duel, while the lady coyly hides her face. In No. 3 she walks gaily off with the victor, while the poor defeated suitor reclines *hors de combat*.

The matches used are Bryant and May's large matches, as these are easier to make up and handle. The joints are made with little "lace" pins. The lady's hat and dress are cut from tissue paper. The swords are whittled match-sticks. The background a sheet of black cartoon paper.

Fig. 3.

Plasticine will be found useful for fixing the match men to the table, and for various other properties and fixings.

Figs. 1, 2 and 3 were taken at f/16 on Ilford hypersensitive plates, but any film or plate will serve provided the exposure is worked out correctly, or a trial exposure made and developed first.

A more elaborate "set" is shown in Fig. 4. In this case the whole arrangement was planned beforehand. The figures were made first of all so that the remainder of the scenery could be made to scale in proper proportion

Fig. 4.

*Both popular films are made in both popular forms*

# PHOTOGRAMS OF THE YEAR

Edited by F. J. MORTIMER, Hon. F.R.P.S., Editor of "The Amateur Photographer and Cinematographer"

"Photograms of the Year" for 1936 is now on sale and makes a most attractive volume for all who are interested in pictorial art.

Selected from the best work of the world's leading photographers, this volume reveals the remarkably wide range of subject matter that comes within the scope of the modern camera artist.

Still-life, landscape, portraiture, posed figures, architecture, and the artistic interpretation of apparently commonplace detail, are all presented with consummate taste and technical skill.

Obtainable from leading Booksellers, or direct from the Publishers

ILIFFE & SONS LTD., DORSET HOUSE, STAMFORD STREET, LONDON SE1

to them. The roadway was a piece of cartridge drawing-paper and coloured to represent an asphalted roadway; the pavement was also drawn and coloured on cartridge paper stuck on to a piece of boarding  $\frac{1}{2}$ -in. thick.

The wall was built up with "Lotts" bricks, stuck together, much to the disgust of my small son, only the red bricks being used, as it was desired to render the walls in a dark tone, and being red would photograph on an ortho. plate darker than on a panchromatic plate.

The wall of the passage was a piece of grey card; the window, an old negative backed with black paper, the film side being towards the lens and given a very slight sheen with Globe polish, a strip of paper being stuck on the face and drawn to represent a moulded window-frame.

The beacon itself was a sixpenny "Beacon" pencil. This is obtainable at almost any stationer's shop.

The lighting arrangement consisted of three small flash-lamp bulbs grouped together and run off two 2-volt accumulators, and rigged up on a roughly-made support with a paper shade adjusted to give the desired effect and approximately correct height. The exposure was 20 minutes at  $f/32$  on an Ilford Iso Zenith plate. Any other form of lighting would have served the purpose, electric, gas, or even candle light, provided the exposure was regulated accordingly. With a strong electric light and a larger aperture in the lens the exposure could be a matter of seconds, but much of the fun for the keen amateur is the contriving and making up the entire outfit.

## Photography in the Sitting-room By R.M. FANSTONE.

AT the present time of the year when many photographers wish to carry on operations, and extemporised dark-rooms in cellars or attics become uncomfortable, to say nothing of low temperatures which are not conducive to the best results, it is possible to carry on operations in a sitting-room, provided that a little attention is given to the points set forth in this note.

### Developing in the Sitting-room.

If the photographer uses a tank for development it is quite an easy matter to carry on operations, and these call for no special comment. It is when plates or films are developed in the dish that the photographer has to give attention to those points which affect other members of the family, and also will avoid possible conflict with the domestic powers on the score of "mess."

The first consideration is how to use the apartment as a dark-room. If plates or films are first desensitised, it is an easy matter to develop under sitting-room conditions. In such a case the desensitising is done outside the apartment, in a dark cupboard, or in the sitting-room itself if all lights are turned out and it is made perfectly dark for two or three minutes. After desensitising,

the lights can be turned on again, but the plates and films must not be subjected to direct light; they may be developed in a corner of the room for preference, without fear of fog. In the case of fast panchromatic plates, the dish should be kept covered during the early stages of development.

### Chemicals Needed.

The best desensitiser is pinacryptol green—which is obtained in small 1-gramme bottles, and the contents made up according to the instructions issued with it to make a 1 in 5,000 solution for use.

Apart from the desensitiser, the other chemicals necessary for the work can be reduced to a bottle of single-solution concentrated developer such as Azol or Rodinal (which simply needs dilution with water), and a bottle containing hypo fixing solution (4 oz. hypo to a pint of water). These with three dishes, a jug of water and a bucket, will suffice for the development of quite a number of negatives in an evening.

During the whole of one winter the writer developed all his negatives in a sitting-room, using a box with the lid removed, and placed on its side, as a screen from light.

The plates had been desensitised, and there was electric light in the room, but fog was never once experienced. With regard to the sensitiveness of plates and films, it often comes as a surprise to many amateurs to learn that a certain amount of light may be present in the room, and once development has started the emulsion will be so much less sensitive that reflected artificial light will do no harm.

### A Safety Measure.

A point that should have attention, if the powers that reign are not to frown upon photographic operations, is to take full protective measures to ensure that any spilt solutions, or drips from negatives or prints, are not transferred to the rugs or carpets. A sheet of floor-cloth upon which operations are conducted is an excellent preventative. Failing this an old metal tea-tray is an excellent support for dishes, etc.

### Printing.

By the use of gaslight paper instead of bromide, print-making by the fireside is a simple matter, and the suggestions with regard to cleanliness apply equally. Provided that the paper is not subjected to direct light there is no fear of fogged prints.

## "The A.P." Monthly Competitions

### AWARDS FOR NOVEMBER

THE outstanding feature of the competition for November was the particularly high quality of the prints entered in the Beginners' Section. For some months these have shown a steady improvement in quality, but in this particular competition the high-water mark was surely reached, and extra awards have been given in consequence. The Intermediate Section was also extremely good, and the Advanced Workers' Section was well up to the high standard it always is. The awards are as follows:

#### ADVANCED WORKERS' SECTION.

First Prize.—"Barrons Hall (Penshurst, Kent)," by J. H. Clark, 304, Camberwell New Road, London, S.E.5.  
Second Prize.—"Quo Vadis?" by H. Parkins, 1, Fairfield Avenue, Staines, Middlesex.

Third Prize.—"Violinist," by M. Desai, Camera Art Circle, 3rd Floor, Cooper Building, Pawwalla Street, Bombay, 4.

Mounting Prize.—"The Storm Passes," by James C. Gilchrist, Ballenoch, Skelmorlie, Ayrshire.

Certificates of Merit.—"On the Quay," by J. F. Cutler, 53, Gibbs Green, Edgware, Middlesex; "Cottages, Otterton," by George A. Slight, 18, Ewelme

Road, Forest Hill, London, S.E.23; "The Dying Age," by Denis Whitlock, 44, Scotts Lane, Shortlands, Kent.

The prints not receiving awards have been grouped, those in the first group receiving Honourable Mention. The others have been marked Class 1, Class 2 and Class 3 respectively.

Those awarded Honourable Mention are as follows: Yahya Arif (Cairo); Edward H. Austin (Liverpool); G. C. Backhouse (Leeds); John Battersby (Nottingham); Octave Benselin (Belgium); F. Annis Burrows (Chalfont St. Peter); R. Rowland Hill (Rugeley); R. Gilbert Jones (Manchester); G. H. Neale (Hampstead, N.W.); (2) Mrs. K. M. Parsons (Reading); G. Warren Parrett (Margate); D. G. Sheldon (Hull); (2) Captain G. Tanner (Kenya); William R. Thorpe (Addiscombe); Robert Wales (Busby); G. T. Yang (Soochow, China).

#### INTERMEDIATE SECTION.

First Prize.—"The Monster," by Harold R. Clough, 28, Danehurst Road, Wallasey, Cheshire.

Second Prize.—"Age," by P. K. Shah, 275, 12th Road, Khar, Bombay, 21, India.

Certificates of Merit.—"Eventide," by L. A. Ward, 21, Cranley Drive, Ruislip, Middlesex; "Pals," by L. Wheatley, 38, Saville Street, South Shields; "Jean Harlow," by R. Gordon Wilson, 25, Colchester Drive, Pinner, Middlesex; "Under the Willows," by B. Woodmansey, 30, Station Street, Ryde, I.O.W.

#### BEGINNERS' SECTION.

First Prize.—"Landfall," by D. Fischer-Webb, Penarrow, Melville Road, Falmouth.

Second Prize.—"Small Boats," by Miss Joan Wales, 86, Fore Street, Redruth, Cornwall.

Extra Second Prize.—"Lynette," by A. A. Champion Harris, 82, Tressillian Road, London, S.E.4.

Certificates of Merit.—"Mother," by H. Boscow, 7, Booth's Hill, Lynton, Warrington; "Portrait," by J. Langley Davis, 9, Sinclair Drive, Mossley Hill, Liverpool, 18; "A View of the Eastern Harbour, Alexandria," by J. Drescher, British Book Club, Alexandria, Egypt; "Fluiddighting—Kirkstall Abbey, Leeds," by R. Gatehouse, 40, Greenmount Place, Lady Pit Lane, Leeds; "Margaret," by M. J. Wallis, Court Lodge, Westerham, Kent.

*A Long Drink. Daylight Silhouette.*

ONE of the most attractive forms of indoor photography that can be followed during the Christmas holidays is the making of silhouettes. The method of making them is simplicity itself, and the results are always popular.

Endless subjects present themselves for treatment in this manner, but the most effective are usually portraits and figures that are easily recognised in profile or which "tell a story." They can be utilised for greeting cards for the New Year, and a series may be attempted that have a connected sequence to illustrate, say, a nursery rhyme.

In any case their production will afford great interest and amusement, particularly for the

young folk who may be pressed into service as models.

While the principle of obtaining the clear-cut black figure against a dead-white background is the same, different methods of illumination can be used. One that will be found perfectly satisfactory is to employ daylight when it is available, although at the

The camera was placed at the end of the garage farthest from the sheet, while the children were posed close up against it.

An alternative to this method would be to utilise a room with French windows, or even a passage with a door at the end with an open air view beyond. All light should be excluded from the room or passage except that coming through the window or doorway. A white sheet is stretched over the opening and the models posed as before. The camera, of course, is inside with the figures, which are seen only in silhouette and are focussed to get them as clear and sharp as possible.

The crux of the whole matter in taking silhouettes is the exposure. It must be just long enough for the white background to develop up quite black and dense in the negative, but not enough to fog or veil the image of the figure, which should remain clear and white. In the daylight examples reproduced the exposures were about three seconds at  $f/11$  with rapid film. If plates are used they should be backed.

Over-exposure must be avoided and development must be carried on

*Going to Market. Daylight Silhouette.*

present time of year clear bright light cannot always be expected.

Several of the silhouettes reproduced here were taken by daylight on a December day. A garage, 16x10 feet, was used as the studio. The window was darkened by a thick curtain. The double doors were opened and a sheet stretched tightly across the lower part of the opening. The upper part was hung with thick curtains so that the only light in the studio came through the sheet.

*Telephoning. Daylight Silhouette.*

*The Gardener.*

# Photography

an ideal form of camera work for the Christmas Holidays.

beyond normal time to secure full density. In fact the rule is to under-expose and over-develop. The print should be made on vigorous contrast gaslight paper to get perfect black-and-white results.

If the above daylight arrangements are not possible, the silhouettes can be made even more easily in the evenings, the only extra accessory being a flash-lamp.

Here again, to ensure a perfect silhouette, no light should reach the side of the subject nearest the camera. This is achieved by hanging the sheet over a doorway between two rooms, the camera and the subject being in one room and the flash-lamp in the other.

If it is preferred a "Photoflood" lamp could be used behind the sheet, and an exposure of  $1/25$ th of a second given by means of the

five feet from the sheet and the subject two feet away on the other side, the lamp, subject and camera being in a straight line.

The flash-lamp is set up, the subject posed within the area of

*Helping Mummy.*

tom of the subjects to outline the feet, etc., leaving a mere baseline as a support for the picture.

This blocking-out with a fine pointed brush can be further employed to "tidy up" any ragged edges, etc., and to emphasise certain items that can be improved by the treatment. In the silhouettes reproduced this is illustrated in the table-tops and in the glasses and bottle. If they had been solid black the effect would not have been so good. In any case, care must be used to include only models and accessories giving a clean-cut and readily recognised outline.

*The Toast.*

camera shutter; but it will generally be found that flash-powder is efficient, ten or fifteen grains of powder being sufficient.

The flash-lamp should be about

*The Bouquet.*

*Miss Muffet.*

the doorway and the camera accurately focussed. The room lights are switched off, the shutter opened, and the flash-light operated, the shutter then being closed. As the action of fifteen grains of flash-powder is practically instantaneous, the outlines will not be blurred

should the sudden flash startle the sitter into moving.

When the negatives have been fixed, washed and dried, more perfect results can be secured by blocking out with 'opaque' and a brush certain parts near the bot-

# NEWS AND REVIEWS

ITEMS OF GENERAL INTEREST FROM ALL QUARTERS.

Will readers please note that in January 1936 our telephone number will be altered to **Waterloo 3333**, but that the Controller of the London Telephone Service has given us authority to publish the new number at once.

The Annual Exhibition of the Central Association will be held at the House of the Royal Photographic Society, 35, Russell Square, during February, 1936. Entry forms have already been sent to the secretaries of all societies concerned, but it should be noted that the last day for receiving entries at the above address is January 10th. The committee hopes that all members of associated societies will send in their best work. The annual C.A. dinner will be held on the last day of the exhibition—Saturday, February 29th—at the Comedy Restaurant, Haymarket, W.C.

The latest new-comer to the miniature camera range which employs the 35-mm. cine stock is the new "Certo Dollina." This is a very compact and efficient little camera, very strongly made and well finished in black leather with nickel fittings. It is fitted with a 5-cm. Schneider Radionar 1/2.9 lens set in the new Rapid Compur shutter, with leather bellows extension. On pressing a button the baseboard drops down and the lens panel automatically jumps forward into position, held rigidly there by short lazy-tongs on either side. The focussing is controlled by an engraved knob on the outside connected with the lazy-tongs, so that it can be focussed before or after

the camera is opened. At all positions the lens panel is remarkably rigid. An enclosed exposure counter numbering up to forty is fitted, which operates direct from the film perforations, and is also adjustable after film is loaded to any number by hand. The rewinding device necessary for 35-mm. spools is simple and efficient. The usual winding knob is released by a half-turn and the film is wound back into the original cassette by the rewind knob at the other end. A totally enclosed optical range-finder is fitted, together with a standard clip for using an auxiliary range-finder. Obtainable from Actina, Ltd., 29, Red Lion Square, London, W.C.1. Price £10.

We draw readers' attention to the Spring Session of a course of Instruction under the direction of Mr. John H. Gear, commencing on the 8th January at the Cripplegate Institute, Golden Lane, City. The work will embrace miniature cameras, negative-making, combination bromide enlarging, bromoils and other useful subjects. Applicants for admission should not delay as bookings are accepted for a limited number which is frequently reached before the opening lecture. The course runs for twelve consecutive Wednesdays at 6.30. Application should be made to the above address.

An International Exhibition of Modern Photography will be held at Prague in the New Year under the auspices of the Manes Society, which is one of the most famous artistic societies in Central

Europe, and which has been organising exhibitions of painting, etc., for the last fifty years. The exhibition will be held in its own premises at Prague from February 28th to April 1st, 1936. The Manes Society hopes that this exhibition will be representative of international photographic art, and therefore invites exhibits from photographers throughout the world. The exhibition will comprise: (1) Portraits, still life, landscapes, compositions, photograms, photographic montage, photographic caricature; (2) scientific photography (astronomy, medicine, microscopy, etc.), documentary photography (social life, aviation, industrial scenes, police and detective work, etc.), advertisement, fashion and film. There is no restriction as to the size of photographs, which should be sent not later than January 31st, 1936, to: S.V.U. Manes, Praha II, Riegrovo nabrezi, 250. Exhibits will be displayed free of charge, and the Manes Society will defray the return postage and will present a souvenir of the Exhibition to all persons submitting specimens of their work.

We have received an attractive seasonable folder containing illustrated particulars of the range of cameras and accessories in stock by the City Sale and Exchange, 90-94, Fleet Street, E.C.4. Any reader wanting a camera on easy payment terms should send for this. It will be forwarded free on application.

The Bristol Photographic Society will hold their second Open Exhibition in May next at the Bristol Museum and Art Gallery. Entry forms are now ready, and may be obtained from the Hon. Exhibition Secretary, Mr. P. V. Cave, 36, Coldharbour Rd., Redland, Bristol, 6.

## Exhibitions and Competitions

CURRENT AND FUTURE.

Notices of forthcoming exhibitions and competitions will be included here every week if particulars are sent by the responsible organisers.

The Amateur Photographer Monthly Competitions for Beginners, Intermediate and Advanced Workers—Entries, December 31. Rules in this issue.

Leicester P.S. International Exhibition.—Entries, January 24, 1936; open, February 24—March 7, 1936. Exhibition Secretary, H. Foscutt, 19, Doncaster Road, Leicester.

Preston Scientific Society.—Eleventh Annual Open Photographic Exhibition. Monday, February 3 to Saturday, February 15, 1936. Entries close, Friday, January 10, 1936. Particulars and entry forms from the Exhibition Secretary, F. Wells, 65, Powis Road, Ashton, Preston, Lancs.

Scottish National Salon.—February 8-29, 1936. Entries close, January 11. Particulars and entry forms from the Hon. Salon Secretary, Norman G. Brown, 36, North Lindsay Street, Dundee.

The 40th Annual Exhibition of the South London P.S.—Open, February 15—March 14, 1936. Entries close, January 21. Further details and entry forms from Hon. Exhibition Secretary, H. S. Adams, 40, Stockwell Park Road, London, S.W.9.

Ilford Photographic Society.—Annual Photographic Exhibition. From Monday, March 2 to Saturday, March 7, 1936. Closing date for entries, Saturday, February 1, 1936. Particulars and entry forms from E. G. Roughton, 63, Havering Road, Romford, Essex.

Edinburgh Photographic Society.—74th Annual Open Exhibition. Open, February 22—March 7, 1936. Entries close, February 3, 1936. Particulars and entry forms from the Hon. Exhibition Secretary, Geo. J. Kennedy, 16, Royal Terrace, Edinburgh.

Birmingham Photographic Society.—45th Annual Exhibition. Open, February 29—March 14, 1936.

Entries close, February 8, 1936. Particulars and entry forms from the Hon. Secretary, Eric H. Bellamy, Waterloo House, 20, Waterloo Street, Birmingham, 2. Birkenhead Photographic Association.—Annual Exhibition. Open from March 4-7, 1936. Entries close, February 12, 1936. Particulars and entry forms from R. Greenwood, Four Chimneys, Irby, Frankby, Cheshire.

Pittsburgh Salon of Photographic Art. The Twenty-third Annual International Salon of Pictorial Photography.—Open, March 13—April 12, 1936. Entries close, February 15, 1936. Particulars and entry forms from C. E. Leshner, Secretary, Pittsburgh Salon, Box 146, Pittsburgh, Pa., U.S.A.

City of London and Cripplegate Photographic Society.—Thirty-first Annual Photographic Exhibition from March 16-21, 1936. Entries close, February 10, 1936. Particulars and entry forms from the Hon. Exhibition Secretary, A. C. Mundy, 11, Monkham Lane, Woodford Green, Essex.

London, Midland and Scottish (London) Photographic Society.—Eleventh Annual Exhibition of Pictorial Photography at Euston Station, London. Open, March 16-21, 1936. Particulars and entry forms from the Hon. Exhibition Secretary, Clarence Pursell, Chief Accountant's Office, L.M.S. Railway Co., Euston Station, London, N.W.1.

Ville Salon International D'Art Photographique de Bruxelles, 1936.—Open from March 21—April 5, 1936. Entries close, February 25. Particulars and entry forms from M. M. Devaivre, 152, Rue Maréchal, at Brussels, 3, Belgium.

Hackney Photographic Society.—47th Annual Exhibition. Open, April 1-4, 1936. Entries close,

March 10. Particulars and entry forms from the Hon. Secretary, Walter Selfe, 24, Pembury Road, Clapton, London, E.5.

Bolton Camera Club.—Annual International Exhibition. Open, April 18-25, 1936 (inclusive). Entries close, March 25, 1936. Particulars and entry forms from T. Trevor Potts (Joint Hon. Exhibition Secretary), 167, Chorley New Road, Bolton.

Darwen Exhibition of Photography.—April 20—May 2, 1936. Entries close, March 19. Particulars and entry forms from the Secretary, J. H. Woods, South Down, Holton Road, Darwen.

Bristol Photographic Society.—Second Annual Open Exhibition, from May 2-19, 1936. Entries close, March 28. Particulars and entry forms from the Hon. Exhibition Secretary, Percy V. Cave, 36, Coldharbour Road, Redland, Bristol, 6.

Fifth Syracuse International Salon of Pictorial Photography.—Open, May 15—June 15, 1936. Entries close, April 15, 1936. Particulars and entry forms from Kent C. Haven, Salon Director, Camera Club of Syracuse, N.Y., U.S.A.

Sunday Referee Weekly Photographic Competition. £10 offered every week for the best picture published. See Sunday Referee for full particulars.

Seventh Chicago International Salon of Photography.—Open, July 23—October 4, 1936. Entries close, June 15, 1936. Further details and entry forms from Alex. J. Krupny, Chicago Camera Club, 137, North Wabash Avenue, Chicago, Illinois, U.S.A.

1 Internationale Kunstphotographische Ausstellung in Karlsbad.—Open from July 18—August 9, 1936. Entries close, June 18, 1936. Particulars and entry forms from Mr. Hugo Heyer, Schulgasse, 26, Karlsbad.

December 25th, 1935

# How I make my EXHIBITION PICTURES

Methods and Ideals of well-known Pictorial Workers.

No. CCCXIII.

Mr. CYRIL  
MATHEWS.

From information communicated to our Special Representative.

"IT is probable that very few, if any, other exhibitors resort to such a method as I employ myself for helping in the selection of the pictures to be shown. It is a special method of elimination. I have a group of relations and friends who form my own selection committee. What I consider my best pictures are placed before them, whether they like it or not, and amongst them they gradually eliminate what they consider to be the least attractive of these, until only four or five remain.

"On those which thus survive the ordeal I concentrate my attention, and do what is necessary to qualify them

for exhibition purposes. I have always been interested in what the layman thinks of my work; he is more impartial and broad-minded than I. Not only do I apply his suggestions (in moderation) to my exhibition work, but also to the various advertising contracts I secure as a professional photographer.

"To the would-be exhibitor I cannot over-emphasise the importance of correct exposure, effective lighting, perfect processing and so on. I work mostly with a quarter-plate Soho reflex, fitted with a 6-in. Ross Xpres, and also a 12-in. Dallon telephoto. Panchromatic plates are used almost exclusively, generally with appropriate filters. In my opinion Ilford plates and filters are of the highest quality, so that I have come to rely entirely on them for all my work.

"I think that the really interesting aspect of photography lies in the naturalness and realism of the subjects selected. I dislike the 'soft focus' effect because it is, in my opinion at any rate, quite unnatural. However, I realise that I am laying myself open to a storm of criticism in making such a statement.

"I am always on the look-out for pictures, even when I am without a camera; in fact most of my pictures are visualised and mentally 'stage-managed' long before my camera is even taken to the spot. My camera is simply a tool with which to materialise my ideals in life, and to record what I have seen and thought.

"My picture 'Ebony and Silver' was taken in Trafalgar Square. Exceedingly careful exposure and scientific calculation of shutter-speed were necessary to get the moving water just right; perfect back lighting gave additional attractiveness to the subject; and I consider it the best outdoor subject I have found this year.

"The gaming-table picture, 'Faites vos Jeux,' was more difficult to secure. This difficulty arose mainly from the human element, but a little diplomacy with certain officials overcame this, and, as is evident from the result, everything finally went very well. This subject, none the less, took considerable time to visualise satisfactorily, and it was no easy matter to secure the right viewpoint. For those who are interested in technical details I may add that the exposure was approximately a quarter of a second at f/11 on a hypersensitive plate, with the additional lighting aid of a 'Sashalite' bulb."

(A further example of Mr. Mathews' work is reproduced on one of the centre Art pages.)

EBONY AND SILVER.

Cyril Mathews.

# Pictorial Analysis

Every week the picture reproduced on the art page opposite will be analysed in detail for the benefit of readers of the paper who are seeking to improve their pictorial work.

"IN THE CATHEDRAL, SEGOVIA," by Alex. Keighley.

IN dealing with architectural interiors, it is seldom that anything more than a literal translation of the features of the subject is attempted. The question of arrangement, as a rule, does receive consideration, but there are rare and beautiful effects of lighting, which vary from hour to hour, as well as transitions of emphasis from one element to another, and it is these which are so infrequently treated.

The cathedral at Segovia is extraordinarily rich both in its interior ornamentation and in lighting effects of the type that is in mind. Externally, it scarcely lends itself to close-up treatment, though its lofty situation, from a distance, makes it a feature of the landscape, but, inside, there are opportunities for innumerable exposures, and the effects of lighting are manifold. Of such, this picture is an example. Its beauty lies in its rendering of a chance gleam of light and its effect upon the architectural detail. The remainder of the subject is shrouded in gloom, which not only subdues what might otherwise appear as a somewhat incoherent and chaotic arrangement of statuary, but heightens the light which comes from above. In this, it is symbolic of the religious character of the building, and, naturally, it turns our thoughts towards the festival of Christmas which to-day is commemorated, and which, in its origin, is responsible for all Christian places of worship.

Possibly, the sentiment is influenced by the day, but it is inspired by the picture, and, in its analysis, regard must be paid to its literary content, which, indeed, plays a not inconsiderable part in the impression it conveys. It is from that gleam that these suggestions arise, and its effect, likewise, forms the pictorial motive.

Its source is hidden behind the vaulting, and, were it visible, it is probable that it would be so forceful that it would claim the major share of the attention; but, possibly in a more

subtle way, its maximum effect is exerted on the figure (1), which, in consequence, becomes the centre of interest. The gleam itself is subsidiary, for, while it is a manifestation

tion is unified. The chief interest of the subject, therefore, centres in this portion, but is definitely localised within that area by the supreme light of the figure.

The arrangement of line and the disposition of light and shade also tend to direct the attention to the neighbourhood of (1). In a general sort of way, the tones towards the base, towards each side and at the very top are deep, and lighten as they approach the figure. The eye is led from tone to tone in gradually ascending brightness to the culminating point, and there it rests. In a similar manner, most of the lines have a directional tendency which either directly or indirectly provide a like indication. Both line and chiaroscuro emphasise the importance of the figure (1) as the element in chief, but the lines, the majority of which are vertical, have another function in that they impart the suggestions of dignity, height and impressiveness.

In a measure, no doubt, these are qualities that are innate in the character of the structure. They might be said to arise from the design of the building; but, as far as the picture is concerned, choice of viewpoint and a considered selection of the precise amount to be included play their part in enabling these suggestions to be conveyed. They might easily be lost, or not quite so well transmitted.

It may be suggested, perhaps, that the local retouching in the neighbourhood of the figure—where there would have been a light from the window—would be more effective were it undetectable or more efficiently disguised.

That such adjustment was desirable, no one would deny, but, while it is a small point, it could be wished that it was not so obvious, and, no doubt, it will receive attention in another edition. In other respects, the work is eminently attractive, and its pictorial appeal beyond question. It is great, not only in conception but in execution.

"MENTOR."

of light itself, it is considerably lower in value on account of the effect of the objects seen through it. Moreover, its position in the picture space is too high and too near the top margin for the necessary degree of strength that should attach to the chief item; but the figure (1) is quite powerfully placed, and, as the gleam connects the two masses of light, their attrac-

## SOME CRITICAL COMMENTS on the Beginners' prints reproduced on the opposite page

THAT the pictures reproduced on the opposite page are appropriate and seasonable at Christmastide is undeniable, for it is the time of year when snow and sunshine are expected out of doors—if only to enhance the warmth and jollity inside—and these conditions on the whole are admirably expressed.

### Concentration of Effect.

But, as was mentioned in these columns in discussing a similar set of prints in our issue of the 11th December last, it is generally the case that snow subjects are more suitably treated as foreground studies, and, in nearly every instance, the upper portions of the prints could be advantageously curtailed.

With No. 1, "Snow Patterns," by Miss J. White, all the real interest lies in the alternation of sunshine and shadow in the immediate foreground. The top half of the print contributes nothing of any value at all. If that be removed, by trimming the print just a fraction above the half-way line, the vital elements of the picture are still retained and are not encumbered by non-essentials, nor is the concentration of interest disturbed by the inclusion of objects outside the limits of the subject proper.

The shape, perhaps, is a little too square, and it rather seems as though it would be preferable for the subject to have been treated as a horizontal instead of a vertical, the viewpoint being inclined downwards to ensure the inclusion of all the shadows, and the exclusion of the upper portion.

### Excess of Contrast.

What could be done with No. 2, "Laden Boughs," by Miss Jean Pearce, is something of a puzzle. The intention is perfectly clear, and the print, no doubt, will sustain its title, but the transitions from black to white are much too intense, and, pictorially, the only thing that can be said is that the subject does not lend itself to treatment.

Such contrasts are quite unamenable. No amount of dodging with different papers or even curtailing the time of development of the negative is likely to lead to anything that would be really acceptable, and, quite

frankly, such arrangements of light and shade are better left alone.

"Wascama Shadows" (No. 3), by Val M. McMillan, represents an improvement, but there is, on account of the inclusion of the trees, something of the same tendency. There is too great a difference between their depth and the brightness of the snow against which they are shown. It may be that, if the shadows on the snow were heavier and the darks of the trees did not offer the same excess of contrast with their immediate surroundings, the impression would convey a greater measure of harmony, but it is rather doubtful, and it would be better if, as suggested in the case of No. 1, the subject were turned into a foreground study pure and simple.

The present rendering does disclose some shadows in the foreground, but whether depressing the line of sight would enable more to be included or not is impossible to say.

### Pattern and Design.

At all events, there should be enough to enable them to be dealt with so as to convey a feeling of design, for without this, or a sense of ordered arrangement, a foreground study would be apt to become incoherent and meaningless.

In No. 6, "A Ski Trail," by E. M. Lingley, there are well-marked shadows in the foreground, and, if this portion of the print be isolated, the upper half as well as a strip along the base and a bit from the left-hand side being removed, the remainder does show a hint of a possible pattern. It does not fall together as well as it might, chiefly for the reason that such an arrangement was never intended, and because the viewpoint is such as to show the trail at too near an approximation to the vertical; but it does show an elementary suggestion of design, and something of what should be sought may be gathered.

Judging from what is shown, a more pleasing arrangement would follow upon the choice of a viewpoint somewhat to the right, higher up, and with the camera directed against the source of light—i.e., to the left—but downwards so as to include only the bases of the trees with a long stretch of foreground, the subject being taken the vertical way.

### A Reconstruction.

The revised arrangement would show, in the upper part of the picture, two or three tree boles, but not much of them, their shadows radiating from the top towards both sides and the base of the print, while the line of the trail, with its irregularity of surface, would come in from the left-hand side.

Reconstruction on these lines would, in all probability, provide a subject with an excellent effect of light and shade, a good impression of the textural quality of the snow, and a suggestion of pattern that should prove highly decorative.

Whether it would have been feasible or not could only have been determined on the spot, but it does seem that something of the nature described could be devised, and, if it can be visualised, the kind of thing to aim for may be imagined. The remaining subjects scarcely lend themselves to handling on similar lines for their character is out of the usual run—No. 4, "Hoar-frost," by Matt. Hutchinson, dealing with the effect indicated by the title, and No. 5, "Au clair de la Lune," by Miss K. M. Tompson, being taken by moonlight.

### Uncommon Effects.

Both, however, fall into line with the ruling regarding emphasising the foreground, and in each case it extends beyond the normal allowance. The suggestion of atmospheric mist is nicely rendered in the former and its arrangement conveys the impression of being well thought out, while, with the latter, the tumbled surface of the snow is admirably portrayed; the lighting effect is something of an achievement, and the arrangement not without a sense of form.

The depth of tone in the sky renders possible the inclusion of the dark tone of the trees, for, in a case like this, they do not convey the same feeling of excessive contrast that arises when they are shown against a lighter setting. This goes to show that circumstances alter cases and each requires treatment according to its individual needs, and the particular effect aimed at.

"MENTOR."

# With the Beginners

## NOTES AND NOTIONS FOR THE LESS ADVANCED WORKER

Every week an article will appear under this heading dealing with a topic of interest to the novice in photography.

### POINTS ABOUT SIMPLE ENLARGERS.—IV.

THE light by which enlargements are made often depends on circumstances rather than choice. It is a question of the artificial light available. For a long time, years ago, I had to put up with a duplex paraffin lamp, but rejoice that, as the song says, "them days is gorn." In desperation I turned to acetylene, but the particular arrangement I used was by no means conducive to peace of mind. In turn I have worked with spirit vapour, incandescent gas, and electric lamps.

#### Enlarger Lighting.

A gas mantle is efficient, the great objection being the amount of heat evolved. Of mercury vapour I have had no experience, and am quite content with electric lamps. I have not found it necessary to use other than those that also serve for domestic lighting. A 60-watt gas-filled filament lamp does all that I require for enlarging on bromide paper from quarter-plate or smaller negatives. For very dense negatives, for considerable degree of enlargement and for chloro-bromide papers I substitute a 100-watt lamp.

For those who have no mains current available it will be interesting to learn that an accumulator will answer within limits. Some years ago a photographer stated that he had made enlargements from quarter-plate negatives, in very moderate time, with a 4-volt 4-watt lamp run off a 6-volt 40-ampere-hour accumulator. Something of the sort is quite a practicable proposition, and can be employed anywhere if nothing better is available.

I always use a pearl, matt, or opal bulb—anything that diffuses the light. This, even without a separate diffuser, does away with the one objection to a condenser—that it shows up flaws and blemishes, negative grain, retouching, etc. This it certainly will do if the source of light is small and brilliant, and if the rays are collected by the condenser and directed through the negative into the lens.

Such a hard, brilliant light gives very different results from those

obtained with a soft reflected light. A condenser with diffused light strikes a happy medium, and is, in my opinion, the most desirable all-round arrangement.

#### Difficulty of Choice.

In these enlarger notes I have attempted to deal only with some of the broad principles involved, but once these are understood the choice of an enlarger should be an easier matter, and also the improvisation or modification of an enlarger to do certain work under certain conditions.

But just as it is impossible to find any single camera that is the best for every possible photographic purpose, so also it is hopeless to expect that any one enlarger will do conveniently and perfectly everything that can be included in this wide field of work.

#### Considerations.

The first thing the beginner must decide is exactly what he wants to do; for example, what size or sizes of negative he will work with, and the greatest degree of enlargement to which he will go.

Then he must consider the conditions available; for example, the sort of light he can employ, and the amount of working space he can command.

More likely than not, the question of cost will be an important factor, and on this the amount of work he is likely to do will have some bearing. Will the outlay, whatever it may amount to, be justified by the results secured?

If after considering these and other points, the beginner can find, among the many, many types available, an enlarger that fills the bill, he should secure it if he possibly can. There are excellent instruments that will do perfectly what they are designed to do, and this may be exactly what is required. That settles the question. In other cases it may be necessary and advisable to compromise a little—say, to give up a bit in the way of maximum enlargement in order to

secure the advantage of automatic focussing.

#### A Frequent Question.

Another of the questions very often cropping up is, Can I use my camera as part of an enlarger? To which the answer is yes or no, perhaps or perhaps not. It sometimes turns out that the said camera is one of the box form, with fixed focus, and a single lens working at a small aperture.

This is where I hope some of my bits of information will come in useful. For example, I have shown that for different degrees of enlargement the lens is positioned at varying distances from the negative. This alone rules out such a camera, apart from the fact that a small-aperture single lens is not suitable for the purpose. It also rules out cameras in which focussing is accomplished by altering the separation of the lens elements.

#### Finding the Answer.

If the question refers to a rack-focussing camera, then another test can be applied. I have shown how to find the lens-negative distances of a lens of given focal length, for different degrees of enlargement. Very well; is it possible for the lens to be fixed at those distances in the camera under consideration? There are certainly a great many cameras which can be fitted bodily to an accessory containing lamp-house, condenser, etc.

In still more cases it is possible that although the camera as a whole cannot be used, the lens can be removed and transferred to the enlarger; and I have given reasons why the lens, unless a telephoto, is likely to be just right for the purpose. The use of either the camera or the lens is a definite economy, and need not be in any way a mere makeshift.

#### Searching Lists.

When it comes to hunting for a complete enlarger to fill certain conditions, there are many firms who may have just the thing. It is rarely that

I feel justified in mentioning individual firms, but on this enlarging question I am going to do so.

From what I have been saying it is evidently often an advantage to know where to get "parts," as well as complete pieces of apparatus, and a firm specialising in these is the old-established one of Messrs. J. Lancaster & Son, of 54, Irving Street, Birmingham. They issue, in addition to their catalogue of enlargers, a special list of parts and accessories,

so that, if you wish, you can select a lamp-house, a condenser, a negative-holder, or whatever you require. For many reasons these lists are worth getting, and they are also worth studying, because there is a great deal of information about enlargers and the "doings" connected therewith.

So as to be quite impartial I also recommend the beginner to collect as many other lists and catalogues as he can, and examine them all. I hope he will make up his mind quite defi-

nately that it is impossible to get the most and the best out of photography without an enlarger of some sort. If he has not got one at all, the sooner he begins an intensive search for one the better; and if he already has one, he should carefully consider whether or not his work is handicapped by it or not.

If any beginner finds himself in doubt or difficulty about the matter I shall be pleased to do my best to help him.  
W. L. F. W.

## Care of the Camera in Winter-time

By CLARENCE PONTING.

**A**LTHOUGH there are quite a number of amateur photographers who use their cameras all the year round, there are others who do not. For these the winter offers a suitable opportunity for effecting repairs to apparatus; such as a new hood on the reflex, or the correction of a lying viewfinder. At this time of the year the makers can give attention to repairs, and the worker will not suffer from the annoyance experienced when the camera cannot be promptly returned during the rush hours of summer.

Film cameras may safely be stored away in a dry drawer until required, for these rarely require repairs nowadays.

If, however, a partly-exposed film is in position, it would be advisable to re-roll this into the position it occupied prior to being inserted in the camera, carefully making a note of the number of the next unexposed film. The film should, of course, be removed in absolute darkness, or in the light of a ruby lamp. The only reason for re-rolling the film is that when an unexposed portion of the film is in position, it may be affected by atmospheric conditions, and give unexpected markings when eventually exposed.

There are still a few of us who use plates, held in position in single metal slides. These should be unloaded, the plates being packed in their original

wrappings and returned to the box. The slides will suffer no ill effects if kept in a dry room, but the draw-slides should not be pushed back into the holders. If these are withdrawn it will give the velvet pile, which acts as a light-trap, time to rise into its original erect position; if the draw-slides are replaced, this pile is apt to become compressed over a lengthy period, and may be the cause of unsuspected light-splashes when again put into use. Put a touch of vaseline on the edges of the draw-slides, and push them up and down a few times before storing away. This will ensure that no rusting takes place in the rabbets; the only likely place where this might occur.

## "The A.P." Monthly Competitions

To encourage pictorial outlook and good technique in the photographic work of our readers in all parts of the world.

### PRIZES AND RULES.

#### (I) For Advanced Workers.

This class is open to all amateur photographers.

**FIRST PRIZE.**—One guinea in cash or "A.P." silver plaque (optional).

**SECOND PRIZE.**—Half a guinea in cash or "A.P." bronze plaque (optional).

**THIRD PRIZE.**—Five shillings in cash.

A special prize of five shillings in cash for the best mounted picture.

#### CERTIFICATES OF MERIT.

In addition to the general rules (see below), the following conditions apply:—

(1) All prints must be accompanied by a stamped addressed envelope or wrapper if they are to be returned. Prints receiving an award will be retained.

(2) Prints must be mounted, but not framed.

(3) Returnable prints in the Advanced Section will be sent back with a typed criticism, and classified according to merit.

(4) Prints may be of any size and by any process, and must be the competitor's own work throughout.

(5) The award of a prize or certificate in the Advanced Workers' Competition or any other competition or exhibition will not debar the competitor from entering again on future occasions and winning further prizes.

#### (II) For Intermediate Workers.

This class is to encourage those readers who have passed the "beginner" stage and may have won an award in the Beginners' Competition, but have not progressed sufficiently to enter in the Advanced Competition.

**FIRST PRIZE.**—Half a guinea in cash.

**SECOND PRIZE.**—Five shillings in cash.

#### CERTIFICATES OF MERIT.

In addition to the general rules (see below), the following conditions apply:—

(1) No print must be larger than 10x8 in., and can be by contact or enlargement by any process, and may be mounted.

(2) The whole of the work (exposure, development, printing, etc.) must be carried out by the competitor.

(3) Prints entered in the Intermediate Section will be criticised and returned if accompanied by stamped addressed envelope or wrapper. Prints receiving an award will be retained.

(4) The award of a prize or certificate in the Intermediate Competition debars the competitor from entering this competition again, but he is then eligible for the Advanced Workers' Section.

#### (III) For Beginners.

This class is open to those who have never won an award in any photographic competition or exhibition.

**FIRST PRIZE.**—Half a guinea in cash.

**SECOND PRIZE.**—Five shillings in cash.

#### CERTIFICATES OF MERIT.

In addition to the general rules (see below), the following conditions apply:—

(1) No print must be larger than 6x4 in. Contact prints or small enlargements up to this size are eligible, but must be unmounted.

(2) The exposure must have been made by the competitor, but developing and printing may be the work of others.

(3) No prints can be criticised or returned.

(4) The award of a prize or certificate in the Beginners' Competition debars the competitor from entering this section again.

#### General Rules.

(1) Any number of prints may be entered, but each print must have on the back the appropriate coupon

(see advertisement pages) the date of which must be within five weeks of the closing date of the competition. Overseas readers may use the most recent coupons to hand.

(2) Each print must have on the back the name and address of the competitor, and the title.

(3) All entries must be addressed to The Editor, *The Amateur Photographer*, Dorset House, Stamford Street, London, S.E.1, and the package must be marked on the outside "Beginners," "Intermediate," or "Advanced," as the case may be.

(4) No packages will be received on which there are postage charges to be paid.

(5) No communications on other matters should be enclosed with competition prints. No correspondence in connection with the competitions can be undertaken.

(6) The entry of a print will be regarded as a declaration that it is eligible under the rules, and that the competitor agrees thereto.

(7) No responsibility is taken for the safety of prints, and the Editor's decision on all points connected with the competitions is final.

(8) The publishers of *The Amateur Photographer* shall have the right to reproduce, without payment, any print entered, or to allow its reproduction in any other paper quoting from *The Amateur Photographer*.

(9) The closing date of each competition is the last weekday of the month. Prints arriving late will be entered for the next month's competition.

(10) The cash prizes awarded in these competitions are dispatched on the fifteenth of the month following the announcement of the awards.

The closing date for the December competition is Tuesday, December 31st, and for the January competition, Friday, January 31st.

# "Picture Points" Parodied

After six months' hard labour in endeavouring to teach the young idea how to shoot—with a camera, our contributor, "Ricardo," has just received a large batch of greeting cards. Here are some with a Christmas flavour, others will follow later.

Top left.  
"Delayed Action."

Top right.  
"Stop Bath."

Left.  
"Colour Sensitive."

Right.  
"Rising Front."

Left.  
"Circle of Confusion."

Right.  
"Over-exposed."

"Spirit-level."

"Dark Room Loading."

# Amateur Cinematography

NEWS, NOTES AND MATTERS OF INTEREST FOR ALL CINEMATOGRAPHERS USING AMATEUR CINÉ APPARATUS.

## "Seeing" the Old Year Out

By

M. A. LOVELL-BURGESS.

CHRISTMAS is a popular theme with photographers, ciné or otherwise, but I have never seen a film dealing with New Year's Eve. Certainly the subject does not present quite so many aspects, at first glance, as the Christmas theme, but to those who have imagination that very fact should be a challenge.

Many amateurs will be using in the New Year the ciné equipment they received at Christmas—some doing ciné work for the first time—and should enjoy testing it on a new subject.

The whole of a New Year film need not—indeed, could not—be made on New Year's Eve. The shots I am going to suggest must be taken from time to time as opportunity offers or as circumstances permit. Indeed, that is one of the chief charms of this type of film. Those who are experienced cinematographers will probably have by them several shots suitable for inclusion.

A useful background for the opening title would be a horse and rider taking the fence of 1936, the letters being large enough to provide the "fence."

The passing of the fateful hour from 11 p.m. to midnight will give the necessary continuity. The main idea is to dramatise this theme by means of contrast. Get a shot of a tower clock, illuminated, with the hands at eleven, and contrast with the grandfather clock in the hall and the electric timepiece in the sitting-room. Now for a series of swift, contrasting cuttings; a shot of a church brightly lit for the Watch Night service, with people hurrying towards it; revellers in the streets; bell-ringers ringing out the old year; dancers, some masked; an old-fashioned family party; a night-watchman by his brazier; a cruising party; a train speeding through the night; an old couple sitting by the fireside, their thought on absent friends and other days, as they listen to the B.B.C. New Year's Eve broadcast. Don't forget that time is providing both continuity and drama in this film. Include shots of clock hands at 11.15, 11.30, 11.45...

Someone representing a B.B.C. announcer at the microphone could be introduced to provide a title. Get across the sense of things happening by a shot of a supposed wireless operator sending out messages into the night.

Midnight. A cuckoo-clock sounds the hour and provides an effective close-up. A girl opens her 1936 diary to make the first entry on the white page of January 1st. The dancers, hand in hand, are

singing Auld Lang Syne. The family party are gathered round the punch-bowl to drink to the New Year. The bell-ringers are now sounding a merry peal in honour of 1936, and people are shaking hands and wishing each other a Happy New Year.

In a film of this nature, once you have suggested the theme to your audience, it is a happy fact that they will bring their own imagination to bear on almost any scene, from a light-house to a moonlit lane.

One word of warning: If you ask your friends to help you in making this film, do not let them overdo any "business" that may fall to their lot. If allowed, they will act their heads off, whether shaking hands, or talking, or tearing December 31st off a block calendar.

Now that it is so easy to obtain fireside scenes and night scenes it is easy to give pictorial contrast. Include plenty of close-ups, do not be afraid of

new angles on carnival scenes, give plenty of time to serious or pictorial sequences, but speed up the revelry by means of quick shots. Include as many characters as you can, and humour if possible, but, above all, never lose sight of the theme, so that your audience may literally "see" the Old Year out and the New Year in.

Another word of advice may be necessary. The subjects and ideas just described are to be taken as suggestions only; they are obviously not all-inclusive, nor are they in any sense exclusive. The most successful film producers are those who have sufficient vision to see more than the casual and superficial observer sees. They can evolve fresh ideas, and reveal new aspects even of familiar things. For these "poets and artists" of the screen there could hardly be a more fertile topic for their genius than the passing of the Old Year and the advent of the New.

*An old-fashioned Christmas. In those districts where snow and ice occur the amateur cinematographer should not miss the chance of securing skating pictures, they always make good action subjects.*

# The Best Screen for an Amateur Picture Show

By SIGURD MOIR.

**S**PEAKING only in terms of the original picture size, it may be said that cinematography is at a great disadvantage when compared with lantern-slide projection.

Most workers know that the tiny picture on a 16-mm. frame (the larger of two very popular amateur sizes) can be accommodated many times over on the familiar  $3\frac{1}{4} \times 3\frac{1}{4}$  glass lantern-slide. Hence, when the pictures are projected to fill a full-size screen the smaller image is being called upon to perform far greater feats than the other.

Then, too, it is important that cinematographers do not overlook the regular intervention of the shutter, which—assuming the latter to possess two sectors each with an angle of 90 degrees—must always result in a sacrifice of half the available illumination. The lantern slide has not to sustain this reduction in light, and the screen brilliance of cinematograph pictures would compare very harshly with that of the “stills,” but for two counter-advantages.

The first of these is the highly-efficient optical system possessed by all high-grade cinematographs, and the second is represented by the unusual care with which manufacturers have attended to the matter of screen surfacing.

## Individual Control.

The first of these factors is standard with most projectors of repute, and over it the worker has but little control. Such projectors are now available for each gauge (and, in one case, for both gauges) of film. But with regard to the second factor—that dealing with the selection or preparation of the screen surface, the enthusiast has much greater scope for the exercise of individual control. He can, for example, knowing the limitations of his lighting equipment, keep down the dimensions of the screen to such an extent that he will not be troubled by poor illumination.

In addition to this, he is now able to choose a screen surface that will reflect a great deal more light than the customary fabric sheet used in slide projection. And, what is even more important, he can select that surface with adequate regard for the conditions under which projection is usually carried out in his own particular room.

## Reflection and Viewing.

The reason that no common screen can be found to satisfy projection in two totally different apartments is not entirely obvious, although it can be made so as the result of experimenting.

All opaque screens, of course, reflect most of the light that falls upon them; but this light is not always reflected at the same angle. Some screen surfaces—like those represented by white-washed walls and painted calico sheeting—possess a very wide angle of reflection or dispersion, whilst others such as those with “silver” and aluminium surfaces have a narrow angle.

The practical importance of these differences lies in the fact that observers viewing the silver screen image from an acute angle (with the screen and not with the optical axis) would probably remark on the paucity of illumination as compared with results observed under identical conditions with a white screen.

Other observers grouped about the axis of projection would be just as emphatic that illumination enjoyed an appreciable improvement when the silver screen was substituted for the white one.

Of course, there are other surfaces than those extremes selected for the above comparison. Foremost amongst them is the crystal or beaded screen.

## Distortion.

This surface is deservedly most popular, because not only is its brilliance to be remarked over both narrow and fairly wide angles, but there is almost

complete freedom from image distortion.

Distortion is that name given to the caricatured or perverted pictures often seen when viewing the screen from a very acute angle. It is most often observed when working with the white screen or distempered wall—a most unfortunate circumstance when we remember that this particular type of surface is not only inexpensive but shows the least falling-off in illumination from dead centre to this present angle, which is now giving rise to contorted pictures.

The silver screen, as most serious cinematographers would expect to find it, suffers from distortion to a very limited extent; but so great is the falling-off in illumination at acute angles of viewing that few workers would be content to watch projection from the points at which this distortion begins to affect the image.

## Helpful Conclusions.

For the guidance of those workers who lack the time in which to conduct the experiments, it may suffice to say that the crystal or beaded screen is certainly the best for all general purposes. Where, however, the room or apartment set aside for the shows is inclined to narrow dimensions, it will be less costly and hardly less satisfactory to rely upon an aluminium curtain. This can be constructed at very little more than the cost of an ordinary white-flattening screen.

Having remarked upon the virtues of the silver screen as they must appear to the owner of a narrow-angle “theatre,” it may be well to draw attention to projection “flare”—a defect not infrequently encountered by observers seated too closely about the axis of showing. This can be avoided by altering the seating, or remedied by applying a suitable abrasive to the offending surface until it loses just its burnishing but not its inherent surfacing.

# The R.P.S. Dinner

**T**HE annual dinner of the Royal Photographic Society, held at the Café Monico on December 11th, was a very enjoyable function, thanks to the arrangements of Mr. R. H. Lawton, the master of ceremonies. In addition to some excellent speeches there was a programme of music and magic, and at the end the company was treated to an exhibition of Dufaycolor and Kodachrome films.

Mr. J. E. Saunders proposed the health of the Society, coupling it with the name of the President, Mr. Robert Chalmers, whom he chided for being one of those Scotsmen who come down into England and carry everything before them. The Society, he said, had been in existence for eighty-two years, and for exactly half that period had rejoiced in the “Royal” prefix and patronage. It had

done well in all directions, in spite of a bad start.

The most recent departure of the “Royal” was to set up a Cinematograph Section; his only complaint about that was that they would persist in spelling “Cinematograph” with a “K”—very soon they would be calling their President Mr. Robert Kalmers.

Mr. Robert Chalmers suitably acknowledged the toast, remarking that the Society would soon have to move into new quarters, and a higher income, best produced by an accession of new members, was essential. It had now reached the 2,000 mark, but there was no reason why it should not be 4,000 before the next year was out.

Dr. D. A. Spencer wittily proposed the health of friends from overseas, and referred to some of the clever people

whom America had wrested from us. Photography had the international outlook. It had brought together men of different countries, whose researches in this field had earned their sincere respect to a much greater degree than their countries' armies and navies. In photography and cinematography there was a common interest which was leading to world understanding instead of chaos, and tolerance and appreciation rather than fear. Dr. C. E. K. Mees made a reply in which he referred at some length to conditions in America, not only as related to photography, but to the recovery of American industry in general after a period of depression.

Mr. Olaf Bloch, with his customary brightness, proposed “The Guests,” and Mr. S. Rowson, representing the cinematograph industry, responded.

# Letters to the Editor

The Editor is not responsible for the opinions of his correspondents.

## APPRECIATION.

SIR,—I have watched your correspondence columns in vain for some letter of appreciation from a novice for all the excellent and helpful articles published in your paper this summer. If you have received any such letters you have evidently been too modest to publish them. Speaking for myself I feel that I cannot thank you sufficiently, as my results have improved out of all recognition, both technically and pictorially.

As one good turn deserves another, allow me to suggest a plan for bringing your excellent paper to the notice of a larger public. Why not enclose a form to be filled up by readers giving names and addresses of their friends likely to be interested in a complimentary copy?—Yours, etc., DONALD EADIE.

[We thank our correspondent for his kind remarks and for his suggestion, which we may act on in the New Year. In regard to other appreciative letters from novices, we receive them regularly, but, as Mr. Eadie surmises, are too modest to publish them. The following letter, however, is one taken at random from the same post.—Ed.]

SIR,—May I take this opportunity of congratulating you on the fine Christmas number of "The A.P.," and also of wishing you a very happy Christmas?

This is my first Christmas number of "The A.P."—I had never touched a camera until April of this year—and working in a newspaper office I know what a lot of work goes to bringing out a paper like yours.

Also, I know that Editors get more "kicks than ha'pence," and I expect that, if the truth were known, I've been responsible for as many kicks as the other fellow.

But seriously, I have to thank you for an enormous amount. In the first place, seeing a copy of "The A.P." prompted me to get my first camera, and since then, its articles have lifted me above the "snap it and send it to the D. and P. man."

Again, when I have had a batch of "hopeless" negatives in my hand—negatives with practically every fault they could have—and have thought my camera would be better in a dust-bin, along comes "The A.P." with its centre art pages, and I have taken heart and carried on.

Incidentally, my newspaper experience taught me to take "something different," and when I finally plucked up courage and joined a camera club—again on your advice—I found that my work had not been in vain, for the other members told me that my work was not nearly so bad as I had thought.

Of course, my advice to all camera enthusiasts is: "Join a camera club as soon as you can; you'll never regret it!"

So carry on the good work, sir! And may you have many new readers in 1936, for they don't know what they're missing!—Yours, etc., "TYRO."

## ELECTRIC EXPOSURE METERS.

SIR,—The increasing use of electric exposure meters raises a question that is of interest to all who use these aids.

With meters of the Watkins type it is laid down by the makers that the light to be tested is that which falls upon the subject to be photographed.

With the electric meters the instructions tell us to point the meter at the scene to be photographed, thus testing the amount of light being reflected from the scene.

This does not seem to be sound in theory.

Take, as an example, two cottages, the conditions being the same except that one is backed by tall trees, while the other is backed by open sky.

A Watkins meter, properly used, would indicate the same exposure in both cases, as the light falling on them is equal, but an electric exposure meter pointed at the cottage would indicate a longer exposure for the cottage backed by the trees.

While this discrepancy may not be serious, it is strange that the electric meters should be designed to be used in a way that is considered wrong with other light-testing meters.—Yours, etc., H. H. GOODCHILD.

## THE IDEAL CAMERA.

SIR,—I feel very disturbed by Mr. Pizey's letter on his ideal camera, and also by a remark made in the Beginners' Section, concerning the necessity of a rising front.

For some time past I have been designing what is intended to be everybody's ideal camera and one which shall be completely foolproof and automatic. Allow me to describe it.

It is essential that it shall be as small and light as possible, so the body is designed on the lines of the Contax, with focal-plane shutter speeded from 2 to 1/1,000th sec. It takes  $3\frac{1}{2} \times 2\frac{1}{4}$  film, either 12 or 16 pictures per reel. The advantage of this size over V.P. is that one can get material for infra-red and colour work. The setting of the shutter winds on the film, of course.

My camera has coupled focussing, naturally, with an arrangement for rapid changing of both lenses and range-finder (bayonet fixing for the former and clip for the latter), and for Press photographers and those who do not mind bulk if it gives them what they want, there will be a lens turret similar to those in use for ciné work, giving just that little bit of extra speed.

But the most important part of the design I have not yet mentioned. This is my "coupled aperture-meter." It is really quite simple, but I consider it a great advance on present camera design. It consists of a photo-electric cell coupled either to the lens diaphragm or the speed-setting knob, at will. The operator decides to use a certain constant speed (or stop), and, setting the camera at this, connects the cell (built-in) with the stop (or speed). All he then has to do is to point the camera at an object, focus, and press a button. The exposure will always be correct.

But, as I mentioned, Mr. Pizey's letter is disturbing. I cannot see how to arrange for automatic compensation for buildings near to. I am quite willing to alter my designs if necessary. Can any one help me?—Yours, etc.,

P. SALZMAN.

## The Week's Meetings

### Wednesday, December 25th.

Dennistoun A.P.A. Whist Drive.

### Thursday, December 26th.

Coatbridge P.A. Exhibition Hanging Night.  
Oldham P.S. Question Night. Members.

### Friday, December 27th.

Wimbledon Ciné Club. General Discussion on the next Production.

### Saturday, December 28th.

Coatbridge P.A. Annual Exhibition Opens.  
Luton and D.C.C. Exhibition Opens.  
Scarborough A.P.C. Three Prints due for Portfolio.

### Monday, December 30th.

Bexley Heath P.S. "Some Problems of the Printing Process." J. Ainger Hall.  
Bradford P.S. Annual Whist Drive.  
City of London and C.P.S. "Mounting Methods." Mr. Hilliard.  
Finchley A.C.S. Lecturettes by Members.  
Glasgow and W. of S.P.A. Council Meeting.  
Leeds C.C. Annual Meeting.

Societies will have their meetings announced here if the syllabus is sent to us at the beginning of the session or from time to time.

### Monday, December 30th (contd.).

Newcastle (Staffs) and D.C.C. "The Amateur Photographer" Prize Slides.  
Oldham E.P.S. Lecture by Slides. J. Langshaw.  
S. London P.S. Jumble Sale.

### Tuesday, December 31st.

Cambridge P.C. Annual Social.  
Hackney P.S. Outings Competition. Prints and Slides.  
Nelson C.C. Inter-Club Slides.  
Portsmouth C. and Ciné C. "The Amateur Photographer" Prize Slides.  
St. Bride P.S. "Slide-Making." J. Lemon.  
Stafford P.S. Competition. (Prints and Slides). Criticism by W. Stuttard.  
Whitehall C.S. "The Land of Shirts." J. Chear.  
Wood Green P.S. "Carbon Printing." A. Kaye.

### Wednesday, January 1st.

Bayswater and Paddington P.S. "Faking Negatives." G. K. Rule.  
Bristol P.S. "Across Europe with Car and Camera." John Hinde.  
Brighton and Hove C.C. "Sunny Italy." Rev. H. O. Fenton.  
Croydon C.C. Social Evening.  
Tunbridge Wells A.P.A. "Record Photographs. Life Story of Thomas Simms." E. R. Ashton.

# Readers' Questions ANSWERED

GENERAL.—All communications for the Editor should be addressed: "The Editor, *The Amateur Photographer and Cinematographer*, Dorset House, Stamford Street, London, S.E.1," and in every case, without exception, must give the name and address of the writer.

CONTRIBUTIONS.—The Editor is glad to consider original, up-to-date manuscripts on photographic subjects. All contributions must be typewritten, or in very legible handwriting on one side of the paper only. Letters or communications arising out of matters already appearing in the paper are not paid for. The Editor disclaims legal responsibility for the safety of matter submitted to him, but he will endeavour to return rejected manuscripts, etc., when a stamped addressed envelope is enclosed. MSS. or prints that are not actually accompanied by a stamped wrapper or envelope can in no case be returned. Reproduction fees for prints are only paid by arrangement beforehand. The sending of a print, without any condition stated, will be taken as permission to reproduce it without fee.

ENQUIRIES AND CRITICISM.—Advice, Criticism and Information are freely given, but the following conditions should be read carefully before applying, as any communication which does not comply with the rules must be ignored.

(1) See "General" above. (2) Every question and every print for criticism must be sent separately through the post, and must be accompanied by a separate stamped addressed envelope. No exception can be made in any case to this rule, except so far as enquiries or prints from Overseas are concerned. (3) Neither enquiries nor prints for criticism must be enclosed with competition prints. (4) On the back of each print sent for criticism, in addition to the name and address of the sender, must be the title (if any), and the criticism coupon from the current issue. (5) Enquiries should be clearly written, on one side of the paper only, and should be specific and not general. Such enquiries as "How can I take interiors?" or "Can you give me some hints on outdoor portraiture?" are too general to be dealt with in this section. (6) All envelopes should be distinctly marked "Query" or "Criticism," as the case may be. (7) Prints are sent for advice or criticism on the distinct understanding that by so doing permission is given or their reproduction without fee. We endeavour to deal promptly with enquiries, but cannot undertake to answer by return of post, nor can we give precedence to any enquiry.

A selection of the replies is printed each week, but all questions are answered by post. Enquiries from abroad must contain a coupon also, but it need not be from the current number, and should be cut from the latest issue to reach the enquirer.

## Tinting Photographs.

Can you please tell me of a way of removing grease and finger-prints on velvet gaslight paper so that I can apply flat, even washes of water-colours for tinting purposes?

C. B. (Godalming.)

In the unfortunate case of having grease and finger-prints on your photographs you might try rubbing them over with cotton-wool just moistened with methylated spirit. No doubt you understand that the prints must be soaked before applying the colour, but we know of no satisfactory method of getting a large, even wash of water-colour on to a photograph with a brush.

## Pyro Developer.

I have made up a quantity of a well-known pyro developer, and on comparing it with the developer advised for the plates I am using, I find that it contains a much smaller amount of pyro. Is it possible now to use the time and temperature tables given for the plates, although the developing agent has been decreased?

G. W. (Lincoln.)

It is a comparatively easy matter to modify the time and temperature table. You will probably find that development would have to be rather lengthened. We suggest that you develop a single negative according to the Ilford table, and so find by experiment what proportion of extra time is required. This proportion will then apply throughout the table.

## Enlarging Lens.

I am making my own 1-plate enlarger, but am rather at a loss as to what size and sort of lens to fit. Can I expect the same tonal quality in an enlargement as in a contact print?

R. W. (Worthing.)

Broadly speaking, any lens will answer your purpose that covers a plate of the size you are using to enlarge from. Preferably its focal length should be about the same as the diagonal of the negative. It is not necessary to have an expensive lens, but it is certainly an

advantage to have an anastigmat which will give a flat image and good definition without stopping down. There is no reason why enlargements should not be of as good quality as contact prints. We hope you have noticed that we are dealing with certain fundamental enlarging matters in our beginners' section.

## Uneven Development.

Can you explain the reason of the curious "hering-bone" marks on the enclosed print? It occurs on many prints from almost every pool but the fault can never be seen in the negative. The negatives are developed in dish by time and temperature methods. W. H. (Ickenham.)

Judging from the print, the marks are due to uneven development of the negative, but they are unusually regular in form, and we cannot give any definite reason for them. We are quite at a loss to understand your remark that there are no marks on the negative itself. If you make two prints from the same negative and find the marks are not in the same position your statement would be correct, and it would then indicate that the trouble is in developing the prints.

## Streamer Marks in Developing.

Can you explain why the enclosed film negatives show a curious "running" effect on objects silhouetted against the sky? It only happens on outdoor subjects when the sky is included. I give details of the camera. R. W. (London.)

We wish you had given us particulars as to your method of development rather than about the camera, as the latter has nothing to do with the matter. The phenomenon to which you refer occurs when negatives are developed vertically in a tank. There are parts of the negative where the developer is doing little or no work; it finds its way downwards and reinforces the almost exhausted developer in the dense portions. If, for example, you take the

case of the cottage, you can imagine developer from the chimney diffusing downwards into the sky, and so bringing vigorous solution to act still further on an already dense part of the sky.

## Hypo-Eliminator.

Can you recommend a satisfactory hypo-eliminator that will not affect the permanence of the negative or print? D. E. (Belfast.)

We have repeatedly stated that the best hypo-eliminator for both negatives and prints is plain water. Washing in either running water for half an hour, or in a dozen changes of clean water will, if the operation is properly conducted, remove all traces of hypo. The process can be slightly hastened, and at the same time a test for hypo applied, by transferring the negative or print, after a preliminary wash in plain water, to a dish containing water coloured pale pink with a very weak solution of potassium permanganate. In this, the pink colour is quickly discharged while hypo is present. The negative or print is then removed to a second dish containing a similar solution. The process is repeated several times until the pink colour remains unchanged. It can then be assumed that there is no hypo remaining, and a final wash in plain water will complete the process.

## Stain Remover.

The yellow stain on the enclosed bromide print appeared during fixing, and although left in the fixing-bath for a considerable time would not go. What is the cause, and how can it be removed? J. D. B. (Plymouth.)

The stain appears to have been caused by forcing development of an underexposed print, and probably appeared while it was still in the developer, but you did not observe it in the yellow dark-room light. The simplest plan would be to make a new and better print, but if this cannot be done you can try the effect of this clearing solution:

Alum (saturated solution) 20 oz.

Hydrochloric acid... 6 drs.

Wash well as soon as the stain is reduced.

## Ox-Gall.

Where can I obtain the ox-gall mentioned frequently with regard to colouring prints? How does it facilitate the colouring procedure? C. C. (Forest Gate.)

Ox-gall is a preparation sold by artists' colourmen and is supplied in solution in small bottles. It has the property of dissolving whatever greasiness is present and allowing the colours to "take."

## Development Times.

In a recent article in "The A.P." on the use of amidol as a developer no development times were given. Can you furnish me with a suitable time for a normal negative in an amidol developer at 65° Fahr.? A. R. (Lyndhurst.)

There is no definite answer to your question. The time of development depends not only on the constitution of the developer and the temperature at which it is used, but the time varies considerably according to the kind of plate or film used and the sort of negative required; as a matter of fact, you can only arrive at suitable times by actual experiment.

## THE IDEAL NEW YEAR'S GIFT

for air-minded youth—  
the most attractive and  
informative book about  
our flying forces

# SQUADRONS *of the* Royal Air Force

Written by

MAJOR F. A. de V. ROBERTSON, V.D., M.A. (Oxon.)  
LIEUT.-COMMANDER C. M. COLSON, R.N.; and FLYING OFFICER W. A. COOKE  
Illustrated from "Flight" Photographs by JOHN YOXALL

**JUST  
PUBLISHED**

Bound in stiff cloth  
boards and with  
attractive jacket in  
photogravure. Size  
12½ x 8½ in.

**PRICE 7/6 net**  
By Post 8/-

*A beautifully Illustrated Record of the work  
of the R.A.F. in peace and war*

In this book the Squadrons of the Royal Air Force are for the first time dealt with as living entities. The personnel of distinguished service units, their record, the machines they use, and modern aircraft are fully described. Cadet routine at Cranwell and training of apprentices at Halton are explained in detail.

140 pages lavishly illustrated with more than a hundred exclusive photographs—fifteen as full-page pictures in photogravure.

## HAND CAMERAS

By R. CHILD BAYLEY  
(THIRD EDITION)

An outstanding feature of this book, which makes a special appeal to all amateur photographers, is a number of separately printed plates, all from hand camera negatives by the author. These are selected to show the very wide range of subjects accessible to the snapshotter, from pure landscape to telephotographic portraiture.

"Hand Cameras" is written primarily for the beginner but contains much of interest and value to the advanced worker.

## PHOTOGRAPHY MADE EASY

By R. CHILD BAYLEY  
Author of "The Complete Photographer,"  
"Hand Cameras," "Photographic  
Enlarging"

AS EASY AS A · B · C

This is a book for photographic beginners, and, if carefully studied, it will enable the novice with a camera to get a greater proportion of successful photographs than would usually be the case.

"Photography Made Easy" should be read by everyone taking up photography: it should form as much a part of the outfit as the camera itself: it is an ideal present to give an amateur photographer.

# Miscellaneous Advertisements

## Prepaid Advertisements

### THE CHARGE FOR ADVERTISEMENTS IN THESE COLUMNS IS :-

12 words or less.....2/6  
2d. for every additional word.

Each paragraph is charged separately.

**SERIES DISCOUNTS** are allowed to Trade Advertisers as follows on orders for consecutive insertions, provided a contract is placed in advance, and in the absence of fresh instructions the entire "copy" is repeated from the previous issue: 13 consecutive insertions, 5%; 26 consecutive, 10%; 52 consecutive, 15%.

All advertisements inserted in these columns must be strictly prepaid and posted to arrive at the Head Office, Dorset House, Stamford Street, S.E.1, not later than first post **FRIDAY** for the following week's issue, or one day earlier at the Branch Offices, 19, Hertford Street, Coventry; Guildhall Buildings, Navigation Street, Birmingham, 2; 260, Deansgate, Manchester, 3; 26a, Renfield Street, Glasgow, C.2.

Advertisements received too late for one issue, or crowded out, are published in the first following in which there is space. The Proprietors retain the right to refuse or withdraw advertisements at their discretion.

Postal Orders sent in payment for Advertisements should be made payable to **ILIFFE AND SONS LTD.**, and crossed

& Co.

Notes being untraceable if lost in transit, should not be sent as remittances.

The Proprietors are not responsible for clerical or printer's errors, although every care is taken to avoid mistakes.

**BOX NUMBERS.**—For the convenience of advertisers, letters may be addressed to numbers at the office of this paper. When this is desired, the sum of 6d. to defray the cost of registration and to cover postage on replies must be added to the advertisement charges, which must include the words: "Box 000, c/o 'The Amateur Photographer'." Replies should be addressed: "Box 000, c/o 'The Amateur Photographer,' Dorset House, Stamford Street, London, S.E.1," and these letters will be simply forwarded by us to the advertiser. It must be understood that we do not deal with the correspondence in any other way, nor accept any responsibility in connection with the advertisement. Readers who reply to Box No. advertisements are warned against sending remittances through the post except in registered envelopes. In all such cases the use of the "Deposit System" is recommended.

## Special Note

Readers who reply to advertisements and receive no answer to their enquiries are requested to regard the silence as an indication that the goods advertised have already been disposed of. Advertisers often receive so many enquiries that it is quite impossible to reply to each one by post. When sending remittances direct to an advertiser, stamp for return should also be included for use in the event of the application proving unsuccessful.

## Deposit System

Readers who hesitate to send money to advertisers in these columns may deal in perfect safety by availing themselves of our Deposit System. If the money be deposited with "The Amateur Photographer and Cinematographer," both parties are advised of its receipt. The time allowed for decision is three days, counting from receipt of goods, after which period, if buyer decides not to retain goods, they must be returned to sender. If a sale is effected, buyer instructs us to remit amount to seller, but if not, seller instructs us to return amount to depositor. Carriage is paid by the buyer, but in the event of no sale, and subject to there being no different arrangement between buyer and seller, each pays carriage one way. The seller takes the risk of loss or damage in transit, for which we take no responsibility. For all transactions up to £10 a deposit fee of 1/- is charged; on transactions over £10 and under £50 the fee is 2/6; over £50 and under £75, 5/-; over £75 and under £100, 7/6; and on all transactions over £100, one-half per cent. All deposit matters are dealt with at Dorset House, Stamford Street, London, S.E.1, and cheques and money orders should be made payable to Iliffe and Sons Ltd.

## Displayed Advertisements

Communications on Advertisement matters should be addressed: The Advertisement Manager, "The Amateur Photographer and Cinematographer," Dorset House, Stamford Street, London, S.E.1. Copy for displayed advertisements for the issue of any particular week must reach Dorset House by the first post on Tuesday morning in the week previous. Rates and conditions will be sent upon application.

## Business Notices Publishing

This advertisement continued in second column.

## WARNING

We have received many complaints from our readers in regard to the business methods of Mr. R. L. Green, trading as R. L. Green's Photographic Exchange, of 213, Fore Street, Edmonton, London, N.18, or (possibly with different initials) as Cine Photo Supplies, 4, Holborn Place, High Holborn, W.C.1.

For some considerable time we have refused to insert his advertisements in "The Amateur Photographer and Cinematographer," and from the complaints we have received it would appear that his practice is to communicate with private advertisers having goods for sale, offering to take such goods in exchange for others, or to purchase for cash. Readers are advised to ignore all such offers from this quarter.

## CAMERAS AND LENSES

This advertisement continued from first column.

**31×2½ Ihagee Folding Reflex, rising and cross front, deep focussing hood, quick-wind focal-plane shutter, 1/15th to 1/1,000th, fitted Meyer Veraplan f/4.5, focussing, cable release, 3 slides, F.P.A.; shop-soiled only, £12.**

# SEASONABLE ADVICE

**This week we deal with the problem of knowing where to get the full range of accessories for a famous miniature camera.**

**S**INCE the introduction of miniature cameras there have been many types and kinds, each with some improvement on its predecessor. It is safe to say that the Leica camera has never been outclassed; its manufacturers have always confined all their efforts to improve this instrument, and they have been enabled, in consequence, to retain the lead which they possessed on its innovation over ten years ago.

One of the little difficulties, however, which often beset Leica owners is in getting supplies of the right accessories just when they most urgently need them.

They may be off to Switzerland and want a long-focus lens for distant scenery. This also applies to cruising in the Mediterranean or elsewhere, or they may need any of the hundreds of Leica accessories for some special purpose. It is very annoying, to say the least of it, to try one dealer after another, to be put off with "we can get it for you." There is one store where five hundred Leica accessories are always in stock and that store is Wallace Heaton, Ltd.

Wallace Heaton, Ltd., are the real Leica specialists and have been ever since the British public first heard the name "Leica." It is safe to say that the London public, at any rate, from the "backs of buses" publicity, are well acquainted with the name.

From Wallace Heaton, Ltd., you can get everything for the Leica, Hektor, Elmar and Summar lenses of every aperture and focal length. From f/2.8 to 13.5 cm., and for use with them angular view-finders, universal view-finders, flashlight outfits, auxiliary reproduction devices, Correx tanks, standard small projectors Valoy and Focomat enlargers. It would take too long to describe here the various and interesting Leica accessories in stock.

Information concerning these accessories and the various phases of photography covered by the Leica camera are set forth in a clear and exhaustive fashion in that wonderful production the "Leica Manual,"

the American book which is the outcome of the collective experience and knowledge of twenty of the world's leading Leica experts. It contains 500 pages with 300 illustrations forming a perfect guide to all Leica owners and, although not a cheap book, is worth many times the 21/-, plus the 6d. postage that it costs. It can be obtained direct from Wallace Heaton, Ltd., of 119, New Bond Street, London, W.1.

When you deal at Bond Street you have the advantage of many Leica facilities which cannot be obtained elsewhere. If you are already a Leica owner, it will pay you to register your camera with Wallace Heaton, Ltd., at once. It does not matter where you bought it; let them have the registration number and send your name and address, and you will receive periodical ideas and advice and free copies of "The Leica News and Technique," as each issue is published, and very helpful you will find it. Registered customers can preserve their copies of the "Leica News" in special binders supplied.

Special envelopes are supplied free on request for posting Leica films, and in such envelopes Leica Spools will travel safely by post for developing and printing.

Leica exposure record cards are free, of course, to registered customers only, and these enable you to keep a record of your exposures and rectify any errors when taking photographs again under similar conditions. Special small cards of instruction are also issued free and these are of such suitable size as to fit the ever-ready Leica case.

Wallace Heaton's developing and printing factory is equipped with the very latest models of all apparatus used in conjunction with Leica. Its operatives are skilled in Leica work. When necessary, we send to Germany to obtain the best information first-hand. All Leica films are developed in total darkness with fine-grain developer, which gives the best possible results, suitable  $3\frac{1}{4} \times 2\frac{1}{4}$

enlargements turned out at a day's notice, at strictly competitive prices—2/- a dozen.

All the latest developers for miniature films such as Paraphenylene Diamine Glycin, Fesagol, Tetenal-Ultrafin and Supramin are available. These are of the most vital importance to the Leica owner who does his own developing and printing work.

Why not get in touch with Wallace Heaton, Ltd., and share in this comprehensive Leica service? The head store is 119, New Bond Street, London, W.1, to which all postal enquiries should be directed, but there are branches at 47, Berkeley Street, London, W.1, next door to Thomas Cook's offices, and 43, Kensington High Street, London, W.8, near John Barker's.

Your needs would always be adequately filled if you used the Wallace Heaton special postal service, as every order receives immediate attention.

Any camera, "still" or "ciné," can be bought for nine monthly instalments and the first payment entitles you to full possession of the goods. Not only that, but the most generous allowances are made against apparatus new and second-hand.

All the staff of Wallace Heaton, Ltd., use the Leica, and that is why they are enthusiastic. What an expert uses, he knows, and what he knows, he recommends.

If, however, larger cameras are preferred, the assurance is given that Wallace Heaton, Ltd., stocks every known make of camera that it is worth while recommending. The service is unequalled, as the following recent testimonials prove.

*"The whole deal, in fact, has been quite a pleasure to me, and I congratulate you on your method of business."*

J. J. H.

*"I came away delighted with my purchase. I should also like to add the courtesy and trouble taken by your assistants was much appreciated."*

K. W. M.

*"Altogether, I am very satisfied with the manner in which you carried through my recent exchange, and, once again, I have nothing but praise for the way in which you carry through an exchange. Thanking you for your considerate attention."*

N. B. R.
